

SEP-C1 FREQUENTLY ASKED QUESTIONS (FAQS)

Note: Unless otherwise stated, "PC connection" refers to a Microsoft® Windows® operating system.

What is the SEP-C1?

The SEP-C1 is a controller designed to be used with Pioneer's DJS software application. However, programs from other manufacturers such as Serato may work as well.

What can I do with the SEP-C1?

When connected to a PC, the SEP-C1 allows DJs to play and manipulate music without using a keyboard and mouse. Portability is easy because the SEP-C1 is powered by the PC via USB.

Will other DJ software applications work with the SEP-C1?

Other popular DJ applications have expressed interest in supporting the SEP-C1. Several indicated that updates to support the Pioneer controller should be released shortly.

How do I connect the SEP-C1 to a PC?

Simply download then install the driver from the <http://www.ProDJnet.com/support> website. After installing the software driver, connect your PC to the SEP-C1 using the USB cable provided with the controller.

Can I update the firmware via USB?

Firmware updates are available online for upload via USB. To receive firmware update notices please register each SEP-C1.

What can I do when the player is connected to a PC?

When connected to a PC, the provided Pioneer DJS software application can control the player. Some commands are Play, Cue, Loop, and more. For a complete list of control options, refer to the included operating instructions.

What's included with the SEP-C1?

The SEP-C1 ships complete with the Pioneer software DJS version 1.60 for Windows, a USB cable, a USB power cord, and the Operating Instructions.

Can I add a drive at a later time to make it a MEP-7000?

There are no plans to allow upgrading an SEP-C1 to an MEP-7000.

Does the SEP-C1 support MP3 players, hard disc drives or other storage devices?

No, the SEP-C1 is a control unit only.

Is it possible to connect a DJM or audio mixer to the SEP-C1?

No the SEP-C1 offers no audio outpour connection.

Can I play CD-G karaoke disc just as the MEP-7000 does ?

No the SEP-C1 does not support CD-G play because it does not have a drive.
