PRV-9000

Pro DVD-Video Recorder

Preliminary Information Sheet

(Contents Subject to Change without Notice)

OVERVIEW

The Pioneer PRV-9000 Pro DVD-Video Recorder is a standalone desktop unit that can make DVD-Video discs with the press of a single button, and in real time. Anyone familiar with the operation of a VCR can easily operate the PRV-9000, making the creation of compatible DVD-Video discs as quick and easy as recording a videotape. Recordings are made using either write-once DVD-R (G) or re-recordable DVD-RW discs that are compatible with most DVD-Video players and DVD-ROM drives.* In DVD-Video mode, maximum program capacity is either one hour or two hours per disc, and up to 99 separate video segments (*titles*) can be recorded. The PRV-9000 Pro DVD-Video Recorder can automatically generate a DVD title menu that can be used to access any recorded title on a DVD-R compatible DVD-Video player similar to how movie titles are used. Analog and digital A/V inputs allow easy connection to both legacy and current video sources, and outputs include component, Y/C and composite video signals. The unit can also play DVD-Video discs on read-only, DVD-R and DVD-RW media, as well as CD Audio and VideoCD discs on read-only, CD-R and VD-RW media.

MAIN FEATURES OF THE PIONEER PRV-9000 PRO DVD-VIDEO RECORDER
