40" PLASMA DISPLAY

WALL & CEILING MOUNTING SYSTEMS

Phone: 800-926-4329 * Fax: 310-952-2990

The Pioneer PDP-V401 40" plasma display can be wall mounted in a horizontal or vertical mode with the full tilt featured PWM-402 or ultra slim PWM-401F (flat) wall mount. In the horizontal mode the PWM-402 (tilting) mount features a tilt adjustment of 0°-5°-10°-15° with positive locking of the set angle. Both mounts attach to the wall on 16" stud center holes configured in the mount. Dual electrical handy box type "knock outs" are available in the base of the mount to facilitate power and signal cables outlets within the mount to minimize visible cables. Once mated with the PWM-402 (tilting) or PWM-401F (flat) the PCA-1 (single) or PCA-2 (dual) adapters provide a (single) 1 1/2" or (dual) 2" NTP (national tapered pipe) coupling with thread lock ceiling mounting points. The (optional) PSA-1 or PSA-2 adjustable height suspension adapter for drop or high ceiling type installation can also mate directly with the PCA-1 or PCA-2 ceiling mount adapter. The PSA-1 (1 1/2") and PSA-2 (2") feature a height adjustment range of 24"-46" (12"-24" with cut) in 1 1/4" increments.
