

60" Plasma Display

50" Plasma Display

42" Plasma Display

The new CMX Series: This is where generations of innovation come together.

Look Deeper.

Brighter, sharper, richer and more vibrant than ever. And that's just what's on the screen. What's behind it is no less brilliant. Increased luminous efficiency deepens blacks and revs up highlights, while reduced light reflection delivers unprecedented contrast and color accuracy, even in brighter environments. The CMX's exclusive single-chip processing minimizes data loss for optimum high-resolution reproduction. And with intuitive color gradation distribution and full-range grayscales, vision knows no bounds. But wherever your road may lead, open architecture Expansion Solutions can take you there. The new CMX Series of Industrial Plasma Displays from Pioneer. Still leading the way, from the inside out.

Expansion Solutions

With the largest number of cards available and communications and video card slots at the back of the panel, the CMX can be easily customized to meet virtually any application need.

Brilliant. Even before you turn it on.
