Chapter 1: Features

About this operation manual
The Home Media Gallery feature of this receiver allows you to play back audio files or listen to Internet radio stations through your PC or other components connected to the LAN terminal on this receiver. Also, the Home Media Gallery lets you play back audio files stored on your USB memory device connected to the USB terminal on this receiver. This operation manual describes the connection, setup, and playback procedures required to enjoy these features. It is advisory that you also refer to the operation manual supplied with your network component.

Features of Home Media Gallery
This receiver is equipped with the LAN terminal and the USB terminal, and you can enjoy the following features by connecting your components to these terminals.

- Playback the music files stored in PCs
  You can playback a lot of musics stored in your PCs using this unit.
  → See Playback with Home Media Gallery on page 4 and Playing back audio files stored on components on the network on page 6.

- Listening to Internet radio stations
  You can select and listen to your favorite Internet radio station from the list of Internet radio stations created, edited, and managed by the vTuner database service exclusively for use with the Pioneer products. Also, you can listen to Internet radio station managed by Neural THX.
  → See Playback with Home Media Gallery on page 4 and Listening to Internet radio stations and Listening to Neural Music Direct on page 7.

- Playing back audio files stored on a USB memory device
  You can directly play back your desired song right from the folder/file list being displayed on the screen.
  → See Playback with Home Media Gallery on page 4 and Playing back audio files stored on a USB memory device on page 6.

Steps to enjoy the Home Media Gallery

Playing back audio files on the network and listening to Internet radio stations
1 Connect to the network through LAN interface. See Connecting to the network through LAN interface on page 3 for more on this.
2 Configure the network settings.
   The setup is necessary only when the router to be connected does not have the built-in DHCP server function.
   See Setting up the network on page 10 for more on this.
3 Playback with Home Media Gallery.
   See Playback with Home Media Gallery on page 4 for more on this.

Playing back audio files stored on a USB memory device
1 Connect USB memory device to the USB terminal. See Using the USB interface on page 3 for more on this.
2 Playback with Home Media Gallery.
   See Playback with Home Media Gallery on page 4 for more on this.

Note
1 Besides a PC, you can also play back audio files stored on your other components with the built-in media server function based on DLNA 1.0 framework and protocols (i.e. network-capable hard disks and audio systems).
Chapter 2: Connection

Connecting to the network through LAN interface

Caution
- Before making or changing the connections, switch off the power and disconnect the power cord from the power outlet. Plugging in should be the final step.

By connecting this receiver to the network via the LAN terminal, you can play back audio files stored on components on the network, including your PC, and listen to Internet radio stations.1

Connect the LAN terminal on this receiver to the LAN terminal on your router (with or without the built-in DHCP server function) with a straight LAN cable (CAT 5 or higher).

Turn on the DHCP server function of your router. In case your router does not have the built-in DHCP server function, it is necessary set up the network manually. For details, see Setting up the network on page 10.

The specifications of a LAN terminal
LAN terminal . . . . . . . . . . . . . . . . . . . . . . . . . . . .Ethernet jack
10BASE-T/100BASE-TX

Using the USB interface
It is possible to listen to two-channel audio2 using the USB interface on the front of this receiver.

Note
1 To listen to Internet radio stations, you must sign a contract with an ISP (Internet Service Provider) beforehand.
- Video files cannot be played back.
- With Windows Media Connect or Windows Media Player 11, you can even play back copyrighted audio files on this receiver.
2 Compatible USB devices include external magnetic hard drives, portable flash memory (particularly keydrives) and digital audio players (MP3 players) of format FAT16/32. It is not possible to connect this unit to a personal computer for USB playback.
- Pioneer cannot guarantee compatibility (operation and/or bus power) with all USB mass storage devices and assumes no responsibility for any loss of data that may occur when connected to this receiver.
Chapter 3:
Playback with Home Media Gallery

Introduction
The Home Media Gallery allows you to play music on media servers connected on an identical Local Area Network (LAN) as the receiver. This unit allows for the playing of files stored on the following:

- PCs running Microsoft Windows XP with Windows Media Connect installed
- PCs running Microsoft Windows Vista or XP with Windows Media Player 11 installed
- DLNA-compatible digital media servers (on PCs or other components)

To play back audio files stored on components on the network or listen to Internet radio stations, you must turn on the DHCP server function of your router. In case your router does not have the built-in DHCP server function, it is necessary to set up the network manually. Otherwise, you cannot play back audio files stored on components on the network or listen to Internet radio stations. See Setting up the network on page 10 for more on this.

About network playback
The network playback function of this unit uses the following technologies:

Windows Media DRM
Microsoft Windows Media Digital Rights Management (WMDRM) is a platform to protect and securely deliver content for playback on computers, portable devices and network devices. Home Media Gallery functions as a WMDRM 10 for networked devices. WMDRM protected content can only be played on media servers supporting WMDRM.

Content owners use WMDRM technology to protect their intellectual property, including copyrights. This device uses WMDRM software to access WMDRM protected content. If the WMDRM software fails to protect the content, content owners may ask Microsoft to revoke the software’s ability to use WMDRM to play or copy protected content. Revocation does not affect unprotected content. When you download licenses for protected content, you agree that Microsoft may include a revocation list with the licenses. Content owners may require you to upgrade WMDRM to access their content. If you decline an upgrade, you will not be able to access content that requires the upgrade.

This product is protected by certain intellectual property rights of Microsoft. Use or distribution of such technology outside of this product is prohibited without a license from Microsoft.

DLNA

DLNA CERTIFIED™ Audio Player

The Digital Living Network Alliance (DLNA) is a cross-industry organization of consumer electronics, computing industry and mobile device companies. Digital Living provides consumers with easy sharing of digital media through a wired or wireless network in the home.

The DLNA certification logo makes it easy to find products that comply with the DLNA Interoperability Guidelines. This unit complies with DLNA Interoperability Guidelines v1.0.

When a PC running DLNA server software or other DLNA compatible device is connected to this player, some setting changes of software or other devices may be required. Please refer to the operating instructions for the software or device for more information.

DLNA and DLNA CERTIFIED are trademarks and/or service marks of Digital Living Network Alliance.
Playback with Home Media Gallery

Content playable over a network
- Even when encoded in a compatible format, some files may not play correctly.
- Movie and photo files cannot be played back.
- There are cases where you cannot listen to an Internet radio station even if the station can be selected from a list of radio stations.
- Some functions may not be supported depending on the server type or version used.
- Supported file formats vary by server. As such, files not supported by your server are not displayed on this unit. For more information check with the manufacturer of your server.

About playback behavior over a network
- Playback may stall when the PC is switched off or any media files stored on it are deleted while playing content.
- If there are problems within the network environment (heavy network traffic, etc.) content may not be displayed or played properly (playback may be interrupted or stalled). For best performance, a 100BASE-TX connection between player and PC is recommended.
- If several clients are playing simultaneously, as the case may be, playback is interrupted or stalled.
- Depending on the security software installed on a connected PC and the setting of such software, network connection may be blocked.

Pioneer is not responsible for any malfunction of the player and/or the Home Media Gallery features due to communication error/malfunctions associated with your network connection and/or your PC, or other connected equipment. Please contact your PC manufacturer or Internet service provider.

"Windows Media™" is a trademark of Microsoft Corporation.
This product includes technology owned by Microsoft Corporation and cannot be used or distributed without a license from Microsoft Licensing, Inc.

Microsoft®, Windows®Vista, Windows®XP, Windows®2000, Windows®Millennium Edition, Windows®98, and WindowsNT® are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

Important
- For the names of folders, files, and Internet radio stations, up to 21 characters are displayed on the folder/file list screen of the Home Media Gallery while up to 24 characters are displayed on the playback screen.
- When you play back audio files, "Connecting..." is displayed before playback starts. The display may continue for several seconds depending on the type of file.
- In case a domain is configured in a Windows network environment, you cannot access a PC on the network while you are logged onto the domain. Instead of logging onto the domain, log onto the local machine.
- This receiver can play back audio files compressed in VBR (Variable Bitrate) mode, but there are cases where the time elapsed may not be correctly displayed.

Authorizing this receiver
In order to be able to play with Home Media Gallery, this receiver must be authorized. This happens automatically when the receiver makes a connection over the network to the PC. If not, please authorize this receiver manually on the PC. The authorization (or permission) method for access varies depending on the type of server currently being connected. For more information on authorizing this receiver, refer to the instruction manual of your server.
1. Press HOME MEDIA GALLERY (press iPod while you press and hold SHIFT) to select HMG as the input source. It may take several seconds for this receiver to access the network. The following screen appears when the Home Media Gallery is selected as the input source.

   ![Home Media Gallery Screen]

   The server without the mark cannot be accessed.

2. Use \( \uparrow / \downarrow \) to select the category you want to play back, and then press ENTER. Select a category from the following list:
   - **USB** — USB memory device
   - **Internet Radio** — Internet radio
   - **Neural Music Direct** — Internet radio that supports Neural Surround
   - **Server Name** — Server components on the network
   - **Favorites** — Favorite songs currently being registered

   Depending on the selected category, the names of folders, files, and Internet radio stations are displayed.

3. Use \( \uparrow / \downarrow \) to select the folder, music file or Internet radio station to play back, and then press ENTER. Press the \( \uparrow / \downarrow \) buttons to scroll up and down the list and select the desired item. When you press ENTER, playback starts with the playback screen being displayed for the selected item. To return to the list screen, press RETURN.
   - In case of a USB memory device or a server

   ![USB Memory Device Screen]

   - In case of Internet radio

   ![Internet Radio Screen]

4. Repeat Step 3 to play back the desired song.
   You can perform the following operations with the remote control of this receiver. Note that some buttons are not available for operation depending on the category currently being played back.

<table>
<thead>
<tr>
<th>Button(s)</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \uparrow )</td>
<td>Play</td>
</tr>
<tr>
<td>( \uparrow \downarrow )</td>
<td>Pause</td>
</tr>
<tr>
<td>( \bullet )</td>
<td>Stop</td>
</tr>
<tr>
<td>( \bullet \uparrow / \downarrow \bullet )</td>
<td>Skip forward and backward</td>
</tr>
<tr>
<td>( \bigcirc )</td>
<td>All repeat (available only during playback)</td>
</tr>
<tr>
<td>( \bigcirc )</td>
<td>Repeat one song (available only during playback)</td>
</tr>
</tbody>
</table>

   **About the playback screen**
   The following screen appears when you play back audio files. Note that some items may not be displayed depending on the type of file.

   ![Playback Screen]

   **Playing back audio files stored on components on the network**

   The server without the mark cannot be accessed.

   **Playing back audio files stored on a USB memory device**

   The maximum number of levels that you can select in Steps 3 and 4 is 8. Also, you can display and play back up to 2000 folders and files within a single folder.\(^1\)

   ![USB Memory Device Screen]

   Only the audio files with the mark can be played back. In case of the folders with the mark, use \( \uparrow / \downarrow \) and ENTER to select the desired folder and audio file.

   **Note**
   - Playback stops when the last song in a folder is played back to the end.
   - When a USB memory device with a large capacity is connected, it may take some time to read all the contents.
   - This receiver does not support a USB hub.
   - Copyrighted audio files cannot be played back on this receiver.
Listening to Internet radio stations

About Internet radio
Internet radio is an audio broadcasting service transmitted via the Internet. There are a large number of Internet radio stations broadcasting a variety of services from every corner of the world. Some are hosted, managed, and broadcast by private individuals while others are by the corresponding traditional terrestrial radio stations or radio networks. Whereas terrestrial, or OTA (over-the-air), radio stations are geographically restricted on the range of radio waves broadcast from a transmitter through the air, Internet radio stations are accessible from anywhere in the world, as long as there is a connection to the Internet, as services are not transmitted through the air but are delivered over the World Wide Web. On this receiver you can select Internet radio stations by genre as well as by region. Moreover, you can register your favorite Internet radio stations by accessing the Pioneer-exclusive Internet radio station management website. When you access the URL from your web browser installed on your PC, this receiver automatically starts downloading the registration information for Internet radio stations. At this stage you are required to register your MAC address as well as your e-mail address for management purposes.

URL: http://www.radio-pioneer.com

About the playback screen
The following screen appears when audio streams from an Internet radio station are received.

About list of Internet radio
The list of Internet radio stations on this receiver is created, edited, and managed by the vTuner database service exclusively for use with this receiver. For details about vTuner, see vTuner on page 16.

Saving and retrieving Internet radio stations
You can easily save and retrieve saved Internet radio stations. See Advanced operations for Internet radio on page 9 for more on this.1

Listening to Neural Music Direct

About Neural Music Direct
Neural Music Direct is an Internet radio station managed and operated by Neural THX. Neural radio stations deliver multichannel surround sound. The Neural-THX Surround mode is automatically selected and lets you enjoy a rich multichannel surround sound experience. For details about Neural THX, see the operation manual supplied separately.

Neural Surround is a trademark owned by Neural Audio Corporation, THX is a trademark of THX Ltd., which may be registered in some jurisdictions. All rights reserved.

Playing back your favorite songs

About the Favorites folder
You can register up to 20 of your favorite songs in the Favorites folder. Note that only the audio files stored on components on the network can be registered.

Registering and deleting audio files and Internet radio stations in and from the Favorites folder
Press PROGRAM while a song is being played back or stopped. The selected song is then registered in the Favorites folder. Up to 20 songs or Internet radio stations can be registered. Songs stored on a USB memory device cannot be registered.

To delete a registered song, select the Favorites folder, select the song you want to delete from the folder, and press CLEAR. The selected song is then deleted from the Favorites folder.

Note
1. To listen to Internet radio stations, you must have high-speed broadband Internet access. With a 56 K or ISDN modem, you may not enjoy the full benefits of Internet radio.
   - The port number varies depending on the Internet radio station. Check the firewall settings.
   - A list of Internet radio stations provided by the vTuner database service is subject to change or deletion without notice due to various reasons.
   - Broadcasts may be stopped or interrupted depending on the Internet radio station. In this case, you cannot listen to a radio station selected from the list of Internet radio stations.
## About playable file formats

The Home Media Gallery feature of this receiver supports the following file formats. Note that some file formats are not available for playback although they are listed as playable file formats. Also, the compatibility of file formats varies depending on the type of server. Check with your server to ensure the compatibility of file formats supported by your server.

*MPEG Layer-3 audio decoding technology licensed from Fraunhofer IIS and Thomson multimedia.*
**Advanced operations for Internet radio**

**Saving Internet radio stations**
This receiver can remember the Internet radio stations that you often listen to in 3 classes (A, B, and C) with up to 10 stations in each class to make the total of 30 stations at its maximum capacity.

Before proceeding with the following steps, check whether you have followed Steps 1 to 3 on page 6.

1. Tune into the Internet radio station that you want to save.
   Tune into the desired Internet radio station by following Steps 1 to 3 on page 6.

2. Press T.EDIT to switch to the station-saving mode.

3. Press CLASS to select the class that you want to save the station in.
   Select the desired class from A, B, and C.

4. Use †/ ‡ to select the number that you want to save the station as, and then press ENTER.
   You can also select the station number by using the number buttons. Select the desired number from 0 to 9.

**Retrieving saved Internet radio stations**
You need to save Internet radio stations first before retrieving them. If there are no Internet radio stations currently being saved, see Saving Internet radio stations above and save at least one Internet radio station before proceeding with the following steps.

1. Select the class that you want to retrieve an Internet radio station from.
   Each time you press CLASS, the class switches to A, B, and C in turn.

2. Use †/ ‡ to select the station number that you want to retrieve.
   You can also select the station number by using the number buttons.
   ‘Preset Not Stored’ appears when you select an Internet radio station currently not being saved.
Chapter 4: Setup

Setting up the network

In case the router connected to the LAN terminal on this receiver is a broadband router (with the built-in DHCP server function), simply turn on the DHCP server function, and you will not need to set up the network manually. You must set up the network as described below only when you have connected this receiver to a server without the DHCP server function. Before you set up the network, consult with your ISP or the network manager for the required settings. It is advisory that you also refer to the operation manual supplied with your network component.

1. IP Address
   The IP address to be entered must be defined within the following ranges. If the IP address defined is beyond the following ranges, you cannot play back audio files stored on components on the network or listen to Internet radio stations.
   - Class A: 10.0.0.1 to 10.255.255.254
   - Class B: 172.16.0.1 to 172.31.255.254
   - Class C: 192.168.0.1 to 192.168.255.254

2. Subnet Mask
   In case an xDSL modem or a terminal adapter is directly connected to this receiver, enter the subnet mask provided by your ISP on paper. In most of the cases, enter 255.255.255.0.

3. Gateway IP
   In case a gateway (router) is connected to this receiver, enter the corresponding IP address.

4. DNS Server Preferred/DNS Server Alternate
   In case there is only one DNS server address provided by your ISP on paper, enter ‘DNS Server Preferred’. In case there are more than two DNS server addresses, enter ‘DNS Server Alternate’ in the other DNS server address field.

5. Proxy Hostname/Proxy Port
   This setting is required when you connect this receiver to the Internet via a proxy server. Enter the IP address of your proxy server in the ‘Proxy Hostname’ field. Also, enter the port number of your proxy server in the ‘Proxy Port’ field.

Tip
- Press \(\text{\textasciicircum}/\text{\textasciicircum}\) or the numeric buttons to enter alphanumeric characters. To delete alphanumeric characters entered one at a time, press \(\text{\textasciicircum}\) or \(\text{CLEAR}\). ‘Cancel Key Editing Lose Changes?’ appears when you press \(\text{RETURN}\) or \(\text{\textasciicircum}\) while the cursor is placed in the leftmost position on the alphanumeric character entry screen. In this case, press \(\text{ENTER}\) to exit from the screen and \(\text{RETURN}\) to return to the screen.

1 Press HOME MEDIA GALLERY (press iPod while you press and hold SHIFT) to select HMG as the input source.
   It may take several seconds for this receiver to access the network. The following screen appears when the Home Media Gallery is selected as the input source.

2 Select ‘Setup’ and press ENTER to confirm your selection.
   The ‘Setup’ screen appears.

Note
1 In case you make changes to the network configuration without the DHCP server function, make the corresponding changes to the network settings of this receiver.
3 Select ‘Network Setup’ and press ENTER to confirm your selection.
The ‘Network Connection’ screen appears.

4 Either ‘Network Found’ or ‘No Network Found’ appears. Check the network connection status and press ENTER.
   • Network Found – Connected to a component on the network.
   • No Network Found – Not connected to a component on the network.
The ‘Network IP Settings’ screen appears.

5 Select ‘Static IP Address’ and press ENTER to confirm your selection.
The ‘IP Address’ screen appears. When you select ‘Automatic (DHCP)’, the network is automatically set up, and you do not need to follow Steps 6 to 15. Proceed with Step 16.

6 Select ‘Change’ and press ENTER to confirm your selection.
The ‘Edit IP Address’ screen appears.

7 Enter the IP address.
   Press the ↑/↓ buttons to select a number and the ←/→ buttons to move the cursor. After you select the last number, press the → button or ENTER. You can also use the numeric buttons to enter a number. The ‘Subnet Mask’ screen appears.

8 Select ‘Change’ and press ENTER to confirm your selection.
The ‘Edit Subnet Mask’ screen appears.

9 Enter the subnet mask.
   After entry, press the → button or ENTER. The ‘Gateway IP’ screen appears.

10 Select ‘Change’ and press ENTER to confirm your selection.
The ‘Edit Gateway’ screen appears.

11 Enter the default gateway IP address.
   After entry, press the → button or ENTER. The ‘DNS Server Preferred’ screen appears.

12 Select ‘Change’ and press ENTER to confirm your selection.
The ‘Edit DNS Preferred’ screen appears.

13 Enter the preferred DNS server address.
   After entry, press the → button or ENTER. The ‘DNS Server Alternate’ screen appears.

14 Select ‘Change’ and press ENTER to confirm your selection.
The ‘Edit DNS Alternate’ screen appears.

15 Enter the alternate DNS server address.
   In case there is only one DNS address, you do not need to enter the alternate DNS server address.
   After entry, press the → button or ENTER. The ‘Enable Proxy Server’ screen appears.

16 Select ‘No’ or ‘Yes’ for the proxy server setting to deactivate or activate the proxy server.
   In case you select ‘No’, proceed with Step 21. In case you select ‘Yes’, on the other hand, proceed with Step 17. The ‘Proxy Hostname’ screen appears.
17 Select ‘Change’ and press ENTER to confirm your selection.
The ‘Edit Proxy Hostname’ screen appears.

18 Enter the address of your proxy server or the domain name.
After entry, press the button or ENTER. The ‘Proxy Port’ screen appears.

19 Select ‘Change’ and press ENTER to confirm your selection.
The ‘Edit Proxy Port’ screen appears.

20 Enter the port number of your proxy server.
Use the numeric buttons to enter the port number. After entry, press the button or ENTER. The ‘Setting OK?’ screen appears.

21 Press ENTER to complete the network setup procedure.
The ‘Top Menu’ screen appears.

Checking the network settings
You can check the following network settings of this receiver: the MAC address, the IP address, the gateway IP address, the proxy server, the Subnet mask, and the firmware version (for the Home Media Gallery of this receiver).

Before proceeding with the following steps, check whether you have followed Steps 1 and 2 on page 10.

3 Select ‘Information’ and press ENTER to confirm your selection.
The ‘Firmware Version’ (for the Home Media Gallery of this receiver) screen appears.

(The version of the illustration is not the latest.)

4 Check the network settings.
Press the buttons to switch the display. Each time you press the buttons, the display switches as follows.

Firmware Version ↔ MAC Address ↔
IP Address ↔ Gateway IP ↔ Proxy Server ↔ Subnet Mask

5 Press RETURN.
The ‘Setup’ screen appears. To return to the ‘Top Menu’ screen, press RETURN again.
# Additional information

## Chapter 5: Additional information

### Troubleshooting

Refer to the following information if you come up with a problem. Operational mistakes may be misunderstood as mechanical problems. Also, the cause of a problem may lie elsewhere other than this receiver. Check your audio components on the network as well as your USB memory device. If problems persist or if the following information does not provide you with an appropriate remedy, consult with your nearest Pioneer service center.

The firewall settings for components on the network are currently in operation. | | Check the firewall settings for components on the network. | —
You are currently disconnected from the Internet. | | Check the connection settings for components on the network, and consult with your network service provider if necessary. | 10
The broadcasts from an Internet radio station are stopped or interrupted. | There are cases where you cannot listen to some Internet radio stations even when they are listed in the list of Internet radio stations on this receiver. | | 7, 15
The folders/files stored on a USB memory device are not displayed. | The folders/files are currently stored in a region other than the FAT (File Allocation Table) region. | Store the folders/files in the FAT region. | —
The number of levels in a folder is more than 8. | Limit the maximum number of levels in a folder to 8. | | 6
There are more than 2000 folders/files stored in a single folder. | Limit the maximum number of folders/files stored in a single folder to 2000. | | 6
The audio files are copyrighted. | Copyrighted audio files stored on a USB memory device cannot be played back. | | 6
The USB memory device does not support the mass storage class specifications. | Try using a USB memory device compatible with the mass storage class specifications. Note that there are cases where even the audio files stored on a USB memory device compatible with the mass storage class specifications are not played back on this receiver. | | 3
Connect the USB memory device and switch on this receiver. | | 3
This receiver recognizes the USB memory device as a fraud. | This receiver does not support a USB hub. | | 3
A USB hub is currently being used. | | | —
A USB memory device is not recognized. | The USB memory device does not support the mass storage class specifications. | Try using a USB memory device compatible with the mass storage class specifications. Note that there are cases where even the audio files stored on a USB memory device compatible with the mass storage class specifications are not played back on this receiver. | 3
Connect the USB memory device and switch on this receiver. | | 3
This receiver recognizes the USB memory device as a fraud. | This receiver does not support a USB hub. | | 3
A USB memory device is connected and displayed, but the audio files stored on the USB memory device cannot be played back. | Some formats of a USB memory device, including FAT 12, NTFS, and HFS, cannot be played back on this receiver. | Check whether the format of your USB memory device is either FAT 16 or FAT 32. Note that the FAT 12, NTFS, and HFS formats cannot be played back on this receiver. | 3
The file format cannot be properly played back on this receiver. | See the list of file formats that can be played back on this receiver. | 8
The Home Media Gallery cannot be operated with the buttons on the remote control. | The remote control is not currently set to the Home Media Gallery mode. | Press and hold SHIFT and press iPod to set the remote control to the Home Media Gallery mode. | 6
## Additional information

### About status messages
Refer to the following information when you come up with a status message while operating the Home Media Gallery.

<table>
<thead>
<tr>
<th>Status messages</th>
<th>Descriptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Please Wait</td>
<td>A component on the network, including a PC, is currently being connected. Wait for a while.</td>
</tr>
<tr>
<td>Connection Down</td>
<td>The selected category or Internet radio station cannot be accessed.</td>
</tr>
<tr>
<td>File Format Error</td>
<td>Cannot be played back for some reasons.</td>
</tr>
<tr>
<td>Track Not Found</td>
<td>The selected song has not been found anywhere on the network.</td>
</tr>
<tr>
<td>Server Error</td>
<td>The selected server cannot be accessed.</td>
</tr>
<tr>
<td>Server Disconnected</td>
<td>The server has been disconnected.</td>
</tr>
<tr>
<td>USB Error</td>
<td>The amount of electricity consumption for a USB memory device is too large.</td>
</tr>
<tr>
<td>Empty</td>
<td>There are no files stored in the selected folder.</td>
</tr>
<tr>
<td>Preset Not Stored</td>
<td>The selected Internet radio station is not currently registered and saved.</td>
</tr>
<tr>
<td>Network Problem</td>
<td>There is a problem with the network settings. Check the network settings. The message also appears then the network settings of this receiver have been changed. In this case, please wait.</td>
</tr>
<tr>
<td>Out of Range</td>
<td>The value entered is beyond the permitted range of the network settings.</td>
</tr>
<tr>
<td>License Error</td>
<td>The license for the contents to be played back is invalid.</td>
</tr>
</tbody>
</table>
Glossary

Default Gateway
Default Gateway is a node on a computer network that serves as an access point to another network. A default gateway (such as a computer and router) is used to forward all traffic that is not addressed to a station within the local subnet.

DHCP (Dynamic Host Configuration Protocol) Server
A DHCP server is a server that allocates IP addresses to hosts (network devices). In most cases, a broadband router serves as a DHCP server in a home network.

DLNA
The Digital Living Network Alliance (DLNA) is a cross-industry organization of consumer electronics, computing industry and mobile device companies. Digital Living provides consumers with easy sharing of digital media through a wired or wireless network in the home.

The DLNA certification logo makes it easy to find products that comply with the DLNA Interoperability Guidelines. This unit complies with DLNA Interoperability Guidelines v1.0.

DNS
DNS is an abbreviation for the Domain Name System, which stores and associates many types of information with domain names. Most importantly, DNS translates domain names (computer hostnames or sitenames, such as www.pioneerelectronics.com) to IP addresses (such as 202.221.192.106).

Ethernet
A frame-based computer networking technology for local area networks (LANs). This player supports 100BASE-TX and 10BASE-T.

FLAC
FLAC (Free Lossless Audio Codec) is an audio format allows lossless codec. Audio is compressed in FLAC without any loss in quality. For more details about FLAC, visit the following website: http://flac.sourceforge.net/

IP (Internet Protocol) address
A unique number that devices use in order to identify and communicate with each other on a network utilizing the Internet Protocol standard, such as ‘192.168.0.1’. No duplicate numbers are allowed in the network.

LAN
LAN is an abbreviation for the Local Area Network, which is a computer network covering a small geographical area, like a home, office, or group of buildings. Current LANs are most likely to be based on switched IEEE 802.3 Ethernet technology, running at 10, 100, or 1000 Mbit/s, or on IEEE 802.11 Wi-Fi technology.

MAC (Media Access Control) address
An address attached to the port of any device. The MAC address cannot be changed.

Neural Surround
Neural Surround represents the latest advancement in surround technology and has been adopted by XM Satellite Radio, FM Radio and Neural Music Direct for broadcasts of surround recordings and live events. Neural Surround employs psychoacoustic frequency domain processing which allows delivery of a more detailed sound stage with superior localization of surround elements. System playback is scalable from stereo up to state-of-the-art multichannel surround.

PlaysForSure
PlaysForSure is a marketing certification given by Microsoft. The PlaysForSure logo makes it easy to find digital media stores and devices that work together. Digital media purchased from online stores carrying the PlaysForSure logo is available for use on this unit. This unit complies with PlaysForSure Requirements Specification for Network Devices Version 2.01. The PlaysForSure logo program is currently available in the U.S. only.

Subnet mask
The IP address is divided into the network address part and the host address part. The subnet mask is expressed as ‘255.255.255.0’. In most cases, the subnet mask is automatically assigned by the DHCP server.

vTuner
vTuner is a paid online database service that allows you to listen to radio and TV broadcasts on the Internet. vTuner lists thousands of stations from over 100 different countries around the globe. For more details about vTuner, visit the following website: http://www.radio-pioneer.com

"This product is protected by certain intellectual property rights of NEMS and BridgeCo. Use or distribution of such technology outside of this product is prohibited without a license from NEMS and BridgeCo or an authorized subsidiary."
Additional information

Windows Media
Windows Media is a multimedia framework for media creation and distribution for Microsoft Windows. Windows Media is either a registered trademark or trademark of Microsoft Corporation in the U.S. and/or other countries. Use an application licensed by Microsoft Corporation to author, distribute, or play Windows Media formatted content. Using an application unauthorized by Microsoft Corporation is subject to malfunction.

Windows Media DRM
Windows Media DRM is a DRM (Digital Rights Management) service for the Windows Media platform. It is designed to provide secure delivery of audio and/or video content over an IP network to a PC or other playback device in such a way that the distributor can control how that content is used. The WMDRM-protected content can only be played back on a component supporting the WMDRM service.

Windows Media Player 11/
Windows Media Connect
Windows Media Connect is software to deliver music, photos and movies from a Microsoft Windows XP computer to home stereo systems and TVs.
With this software, you can play back files stored on the PC through various devices wherever you like in your home.
At this time you cannot download the Windows Media Connect software from Microsoft’s website. If your server currently does not have Windows Media Connect installed, install Windows Media Player 11 (for Windows XP) instead. This software can be downloaded from Microsoft’s website.
For more information check the official Microsoft website.
