ELITE

audio/video multi-channel receiver

sc-27
sc-25
FEDERAL COMMUNICATIONS COMMISSION DECLARATION OF CONFORMITY

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Product Name: AUDIO/VIDEO MULTI-CHANNEL RECEIVER
Model Number: SC-27 / SC-25
Responsible Party Name: PIONEER ELECTRONICS SERVICE, INC.
Address: 1925 E. DOMINGUEZ ST. LONG BEACH, CA 90801-1760, U.S.A.
Phone: 1-800-421-1404

IMPORTANT NOTICE
THE SERIAL NUMBER FOR THIS EQUIPMENT IS LOCATED IN THE REAR.
PLEASE WRITE THIS SERIAL NUMBER ON YOUR ENCLOSED WARRANTY CARD AND KEEP IN A SECURE AREA.
THIS IS FOR YOUR SECURITY.

NOTE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
— Reorient or relocate the receiving antenna.
— Increase the separation between the equipment and receiver.
— Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
— Consult the dealer or an experienced radio/TV technician for help.

CAUTION
This product satisfies FCC regulations when shielded cables and connectors are used to connect the unit to other equipment. To prevent electromagnetic interference with electric appliances such as radios and televisions, use shielded cables and connectors for connections.

CAUTION
The STANDBY/ON switch on this unit will not completely shut off all power from the AC outlet. Since the power cord serves as the main disconnect device for the unit, you will need to unplug it from the AC outlet to shut down all power. Therefore, make sure the unit has been installed so that the power cord can be easily unplugged from the AC outlet in case of an accident. To avoid fire hazard, the power cord should also be unplugged from the AC outlet when left unused for a long period of time (for example, when on vacation).

Operating Environment
Operating environment temperature and humidity: +5 °C to +35 °C (+41 °F to +95 °F); less than 85 %RH (cooling vents not blocked)
Do not install this unit in a poorly ventilated area, or in locations exposed to high humidity or direct sunlight (or strong artificial light)

CAUTION
This Class B digital apparatus complies with Canadian ICES-003.

Information to User
Alterations or modifications carried out without appropriate authorization may invalidate the user’s right to operate the equipment.

VENTILATION CAUTION
When installing this unit, make sure to leave space around the unit for ventilation to improve heat radiation (at least 20 cm at top, 10 cm at rear, and 20 cm at each side).
WARNING
Slots and openings in the cabinet are provided for ventilation to ensure reliable operation of the product, and to protect it from overheating. To prevent fire hazard, the openings should never be blocked or covered with items (such as newspapers, table-cloths, curtains) or by operating the equipment on thick carpet or a bed.
IMPORTANT

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

CAUTION

RISK OF ELECTRIC SHOCK
DO NOT OPEN

CAUTION: TO PREVENT THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

IMPORTANT SAFETY INSTRUCTIONS

1) Read these instructions.
2) Keep these instructions.
3) Heed all warnings.
4) Follow all instructions.
5) Do not use this apparatus near water.
6) Clean only with dry cloth.
7) Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions.
8) Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9) Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10) Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11) Only use attachments/accessories specified by the manufacturer.
12) Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
13) Unplug this apparatus during lightning storms or when unused for long periods of time.
14) Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

WARNING

This equipment is not waterproof. To prevent a fire or shock hazard, do not place any container filled with liquid near this equipment (such as a vase or flower pot) or expose it to dripping, splashing, rain or moisture.

WARNING

Before plugging in for the first time, read the following section carefully.
The voltage of the available power supply differs according to country or region. Be sure that the power supply voltage of the area where this unit will be used meets the required voltage (e.g., 230 V or 120 V) written on the rear panel.

This product is for general household purposes. Any failure due to use for other than household purposes (such as long-term use for business purposes in a restaurant or use in a car or ship) and which requires repair will be charged for even during the warranty period.

CAUTION

To prevent fire hazard, the Class 2 Wiring Cable should be used for connection with speaker, and should be routed away from hazards to avoid damage to the insulation of the cable.

WARNING

To prevent a fire hazard, do not place any naked flame sources (such as a lighted candle) on the equipment.
WARNING: Handling the cord on this product or cords associated with accessories sold with the product will expose you to chemicals listed on proposition 65 known to the State of California and other governmental entities to cause cancer and birth defect or other reproductive harm. Wash hands after handling.

If the AC plug of this unit does not match the AC outlet you want to use, the plug must be removed and appropriate one fitted. Replacement and mounting of an AC plug on the power supply cord of this unit should be performed only by qualified service personnel. If connected to an AC outlet, the cut-off plug can cause severe electrical shock. Make sure it is properly disposed of after removal. The equipment should be disconnected by removing the mains plug from the wall socket when left unused for a long period of time (for example, when on vacation).

- SC-25 – Operating multiple receivers (page 103)
- SC-25 – Setting the remote to control other components (page 103)
Before you start

Chapter 1: Before you start

Our philosophy
Pioneer is dedicated to making your home theater listening experience as close as possible to the vision of the moviemakers and mastering engineer when they created the original soundtrack. We do this by focusing on three important steps:

1. Achieving the highest possible sound quality
2. Allowing for customized acoustic calibration according to any listening area
3. Fine-tuning the receiver with the help of world-class studio engineers

Features

- **Direct Energy HD Amplifier**
  Through a collaboration, Pioneer and ICEpower have jointly developed a unique class D amplifier called a “Direct Energy High Fidelity Class D (HD) amplifier”. This new generation reference amplifier offers outstanding performance (high output of 770 W (SC-27)/700 W (SC-25) simultaneous) with high sound quality and reproduces the latest in multi-channel digital contents.

- **Easy setup using Advanced MCACC**
  The Auto MCACC Setup provides a quick but accurate surround sound setup, which includes the advanced features of Professional Acoustic Calibration EQ. This innovative technology measures the reverb characteristics of your listening area, allowing you to customize your system calibration with the help of a graphical output that can be displayed on-screen or using computer. With the additional benefits of numerous MCACC preset memories, standing wave control and microphone measurements from a series of reference points, your home theater experience can be truly customized for optimal surround sound.

- **THX certified design (In case of SC-27)**
  This receiver bears the THX Select2 Plus logo, which means it has passed a rigorous series of quality and performance tests covering every aspect of the product. This includes testing of pre-amplifier and power amplifier performance and operation, and hundreds of other parameters in both the digital and analog domain, making your home theater experience as faithful as possible to what the director intended.

- **Dolby Digital and DTS decoding, including Dolby Digital EX, Dolby Pro Logic IIx, DTS 96/24, DTS-ES, Dolby Digital Plus, Dolby TrueHD, DTS-EXPRESS and DTS-HD Master Audio**
  Dolby Digital and DTS decoding brings theater sound right into your home with up to six channels of surround sound, including a special LFE (Low Frequency Effects) channel for deep, realistic sound effects. The built-in Dolby Pro Logic IIx and DTS Neo:6 decoders not only provide full surround sound decoding for Dolby Surround sources, but will also generate convincing surround sound for any stereo source.

  Also, with the addition of a surround back speaker, you can take advantage of the built-in Dolby Digital EX and DTS-ES decoders for six-channel surround sound.

  Furthermore, Dolby Digital Plus and Dolby TrueHD, which are designed for the next-generation high-definition media such as Blu-ray Disc and HD DVD, support up to 7.1 channels and 8 channels respectively. DTS-EXPRESS is a low-bitrate encoding technology supporting up to 5.1 channels, with fixed data transfer rates ranging from 24 kbps to 256 kbps (this encoding is available only when signals are delivered to this receiver as primary audio).

  DTS-HD Master Audio delivers audio signals to listeners without any loss of data with its high transfer rates.

- **Phase Control**
  The Phase Control technology incorporated into this receiver’s design provides coherent sound reproduction through the use of phase matching for an optimal sound image at your listening position.

- **Full Band Phase Control**
  The Full Band Phase Control feature analyzes the frequency-phase characteristics of the speakers connected and corrects the phase distortion to the flattened frequency-phase characteristics. This
Before you start

correction minimizes the group delay of the middle- and
low-frequency ranges against the high-frequency range
and improves the frequency-phase characteristics
across all ranges. Furthermore, the enhanced frequency-
phase characteristics between channels ensure better
surround sound integration.

- **Sound Retriever**
The Sound Retriever feature employs DSP technology to
restore sound pressure and smooth jagged artifacts left
over after compression. This helps bring CD quality
sound back to WMA and MP3 audio files and achieves a
richer sense of presence when playing Dolby Digital, DTS
or WMA 9 Pro audio formats recorded in multiple
channels on DVDs and other discs.

- **HOME MEDIA GALLERY**
This receiver can play back contents stored on your
computer when your computer is connected to the LAN
terminal of this receiver. Also, you can listen to the
Internet radio stations.

- **Front Stage Surround Advance**
With the Front Stage Surround Advance feature, you can
enjoy seamless, natural surround sound effects using
only the front speakers, without deteriorating the quality
of the original sound.

- **Auto Level Control**
When the source is played in Auto level control mode
(ALC), this receiver automatically equalizes the playback
sound level according to the variation in recording levels.

- **Optimum Surround**
All movie creators do their best to express movie’s story
and use sounds 50% to achieve it. They assume that the
finally mixed sounds should be best sound balance at
movie theaters that can perform a big sound. However, in
many cases, such a big sound is actually too much for
customer’s Home Theater environment, smaller volume
is normally used.

  In such case, there is possibility that the sound balance
  is changed/depressed compared to movie theaters. The
  volume is smaller, the possibility is higher. In short,
  smaller volume can NOT tell us stories properly as the
  same as creator’s intention.

- **HDMI and digital video conversion**
This receiver is compatible with the HDMI digital video
format, providing you with high-definition digital video/
audio via a single cable.

  High-quality sound formats such as DTS-HD and Dolby
  TrueHD are supported while this receiver is also
  compatible with the Deep Color and x.v.Color feature
  (x.v.Color is trademarks of Sony Corporation). You can
  operate this receiver in synchronization with your Pioneer
  component that supports the KURO LINK function by
  connecting your component to this receiver via HDMI.

Also, the built-in digital video converter of this receiver
makes both de-interlacing and up-scaling possible, and
analog video signals being input are converted and
output as digital video signals at the HDMI terminal.

- **XM and SIRIUS Ready**
With the XM and SIRIUS Radio terminals, you’ll be up
and running in no time. This receiver’s enhanced
compatibility makes XM HD Surround playback as well
as on-screen control of your XM and SIRIUS Radio an
added possibility.

- **iPod/iPhone and USB Ready**
This receiver has the terminals for connecting an iPod/
iPhone unit and a USB mass storage device.

The iPod terminal is ready for handling digital audio and
video, and this receiver’s enhanced compatibility makes
on-screen control of your iPod an added possibility.

The USB terminal allows you to listen to two-channel
audio from a USB mass storage device connected to this
receiver.

Checking what’s in the box
Please check that you’ve received the following supplied
accessories:

- Setup microphone (cable: 5 m (16.4 ft.))
- Remote control unit
- Dry cell batteries x2
- AM loop antenna
- FM wire antenna
- iPod cable
- Power cord
- Warranty card
- These operating instructions

Installing the receiver

- When installing this unit, make sure to put it on a
level and stable surface.

Don’t install it on the following places:
- on a color TV (the screen may distort)
- near a cassette deck (or close to a device that gives off
a magnetic field). This may interfere with the sound.
- in direct sunlight
- in damp or wet areas
- in extremely hot or cold areas
- in places where there is vibration or other movement
- in places that are very dusty
- in places that have hot fumes or ois (such as a kitchen)
- Do not touch this receiver’s bottom panel while the
  power is turned on. The bottom panel gets hot when
  the power is on, and touching it could cause burns.
Before you start

CAUTION
Incorrect use of batteries may result in such hazards as leakage and bursting. Observe the following precautions:

- Never use new and old batteries together.
- Insert the plus and minus sides of the batteries properly according to the marks in the battery case.
- Batteries with the same shape may have different voltages. Do not use different batteries together.
- When disposing of used batteries, please comply with governmental regulations or environmental public instruction’s rules that apply in your country or area.

WARNING
Do not use or store batteries in direct sunlight or other excessively hot place, such as inside a car or near a heater. This can cause batteries to leak, overheat, explode or catch fire. It can also reduce the life or performance of batteries.

Operating range of remote control unit

The remote control may not work properly if:

- There are obstacles between the remote control and the receiver’s remote sensor.
- Direct sunlight or fluorescent light is shining onto the remote sensor.
- The receiver is located near a device that is emitting infrared rays.
- The receiver is operated simultaneously with another infrared remote control unit.
Chapter 2:
Controls and displays

Remote control (In case of SC-27)

The remote has been conveniently color-coded according to component control using the following system:

- **White** – Receiver control, TV Control
- **Blue** – Other controls

1. **MULTI-ZONE operation selector switch**
   Switch to perform operations in the main zone, ZONE 2 and ZONE 3 (page 91).

2. **RECEIVER**
   This switches between standby and on for this receiver.

3. **MULTI OPERATION**
   Use this button to perform multi operations (page 99).

4. **Input function buttons**
   Press to select control of other components (see Controlling the rest of your system (In case of SC-27) on page 96).

5. **INPUT SELECT**
   Use to select the input function (page 50).

6. **Character display (LCD)**
   This display shows information when transmitting control signals.
   The following commands are shown when you’re setting the remote to control other components (see Controlling the rest of your system (In case of SC-27) on page 96):
   - **SETUP** – Indicates the setup mode, from which you choose the options below.
   - **PRESET** – See Selecting preset codes directly on page 96.
   - **LEARNING** – See Programming signals from other remote controls on page 97.
   - **MULTI OP** – See Multi Operation and System Off on page 99.
   - **SYS OFF** – See Multi Operation and System Off on page 99.
   - **DIRECT F** – See Direct function on page 99.
   - **RENAME** – See Renaming input function names on page 98.
   - **ERASE** – See Erasing one of the remote control button settings on page 98.
   - **RESET** – See Resetting the remote control preset on page 98.
   - **READ ID** – See Confirming preset codes on page 98.
Controls and displays

RC MODE – See Operating multiple receivers on page 96.

7 TV CONTROL buttons
These buttons are dedicated to control the TV assigned to the TV operation selector switch. Thus if you only have one TV to hook up to this system assign it to the TV operation selector switch (see page 96 or page 103 for more on this).

○ – Use to turn on/off the power of the TV.
VOL +/- – Use to adjust the volume on your TV.
INPUT – Use to select the TV input signal.
CH +/- – Use to select channels.
MUTE – Use to mute the sound or cancel the mute mode.

7 TV CONTROL buttons
These buttons are dedicated to control the TV assigned to the TV operation selector switch. Thus if you only have one TV to hook up to this system assign it to the TV operation selector switch (see page 96 or page 103 for more on this).

7 TV CONTROL buttons
These buttons are dedicated to control the TV assigned to the TV operation selector switch. Thus if you only have one TV to hook up to this system assign it to the TV operation selector switch (see page 96 or page 103 for more on this).

7 TV CONTROL buttons
These buttons are dedicated to control the TV assigned to the TV operation selector switch. Thus if you only have one TV to hook up to this system assign it to the TV operation selector switch (see page 96 or page 103 for more on this).

7 TV CONTROL buttons
These buttons are dedicated to control the TV assigned to the TV operation selector switch. Thus if you only have one TV to hook up to this system assign it to the TV operation selector switch (see page 96 or page 103 for more on this).

6 Tuner/component control buttons/HOME MENU
These button controls can be accessed after you have selected the corresponding input function button (DVD, DVR, TV, etc.). The BAND and T.EDIT tuner controls are explained on page 56.

Set the remote control operation selector switch to RECEIVER to access the following controls:

AUDIO PARAMETER – Use to access the Audio options (page 88).
VIDEO PARAMETER – Use to access the Video options (page 90).
HOME MENU – Use to access the Home Menu (pages 45, 48, 85, 109, 121, 123 and 128).
RETURN – Press to confirm and exit the current menu screen (also use to return to the previous menu with DVDs or to select closed captioning with DTV).

9 TUNE/PRESET /ENTER (TUNE/PRESET) /ENTER
Use the arrow buttons when setting up your surround sound system (see page 109) and the Audio or Video options (page 88 or 90). Also used to control DVD menus/options and for deck 1 of a double cassette deck player. Use TUNE /+/ to find radio frequencies and use PRESET /+/ to find preset stations (page 56).

10 Component control buttons
The main buttons (▷, ■, etc.) are used to control a component after you have selected it using the input function buttons.

The controls above these buttons can be accessed after you have selected the corresponding input function button (for example DVD, DVR or TV). These buttons also function as described below.

Press TUNER first to access:

MPX – Switches between stereo and mono reception of FM broadcasts. If the signal is weak, then switching to mono will improve the sound quality (page 56). NOISE CUT MODE 1 to 2 can be selected when receiving AM broadcasts.

Set the remote control operation selector switch to RECEIVER first to access:

STATUS – Press to check selected receiver settings (page 94).
PHASE CTRL – Press to switch on/off Phase Control or Full Band Phase Control (page 68).
CH LEVEL – Press repeatedly to select a channel, then use ↔ to adjust the level (page 126).
PQLS – Press to select PQLS setting (page 86).
AUTO/ALC/DIRECT – Switches between Auto Surround (page 61), Auto level control, Optimum Surround mode and Stream Direct mode (page 65).
STEREO – Switches between stereo playback and Front Stage Surround Advance modes (page 63).
STANDARD – Press for Standard decoding and to switch between the various Pro Logic IIX and Neo:6 options (page 62).
ADV Surr – Use to switch between the various surround modes (page 63).
THX – Press to select a Home THX listening mode (page 63).

11 Number buttons and other receiver/component controls
Use the number buttons to directly select a radio frequency (page 56) or the tracks on a CD, DVD, etc.

ENTER can be used to enter commands for TV or DTV.

After set the remote control operation switch to RECEIVER:

SIGNAL SEL – Use to select an input signal (page 68).
SLEEP – Use to put the receiver in sleep mode and select the amount of time before sleep (page 93).
DIMMER – Dims or brightens the display (page 93).
A.ATT – Attenuates (lowers) the level of an analog input signal to prevent distortion (page 93).
SBch – Use to select the surround/virtual back channel mode (page 66).
MCACC – Press to switch between MCACC presets (page 67).
HDMI OUT – Switch the HDMI output terminal (page 94).

Press TUNER first to access:

D.ACCESS – After pressing, you can access a radio station directly using the number buttons (page 56).
CLASS – Switches between the seven banks (classes) of radio station presets (page 56).

12 SOURCE
Press to turn on/off other components connected to the receiver (see page 96 for more on this).
13 Remote control illumination button
Press to turn on/off the illumination of some of the
buttons and the LCD light.1

14 Remote control operation selector switch
Set to RECEIVER to operate the receiver, TV or SOURCE
to operate the TV or the source device.
When this switch is set to RECEIVER, the receiver can be
controlled (used to select the white commands above the
number buttons (A, ATT, etc.)). Also use this switch to set
up surround sound.

15 VOL +/–
Use to set the listening volume.

16 MUTE
Mutes the sound or restores the sound if it has been
muted (adjusting the volume also restores the sound).

17 AUDIO – Changes the audio or channel on DVD or
BD discs.
   DISP – Switches between named station presets and
   radio frequencies.
   CH +/- – Use to select channels for DVD/DVR units.

Note
1 Press and hold in the remote control illumination button for 5 seconds to change the illumination mode 1 or 2. When set to LIGHT M2 (default),
the illumination only lights when the remote control illumination button is pressed. When switched to LIGHT M1, the illumination lights
whenever buttons are operated. Setting LIGHT M1 will shorten the service life of the batteries.
Controls and displays

Remote control (In case of SC-25)

1  ○ RECEIVER
   This switches between standby and on for this receiver.

2  Input function buttons
   Press to select control of other components (see Controlling the rest of your system (In case of SC-25) on page 103).

3  Number buttons and other receiver/component controls
   Use the number buttons to directly select a radio frequency (page 56) or the tracks on a CD, DVD, etc.
   ENTER can be used to enter commands for TV or DTV.
   Press RECEIVER first to access:
   - INPUT SELECT – Use to select the input function (page 50).
   - HDMI OUT – Switch the HDMI output terminal (page 94).
   - SIGNAL SEL – Use to select an input signal (page 68).
   - MCACC – Press to switch between MCACC presets (page 67).
   - SLEEP – Use to put the receiver in sleep mode and select the amount of time before sleep (page 93).
   - SBch – Use to select the surround back/virtual surround back channel mode (page 66).
   - A.ATT – Attenuates (lowers) the level of an analog input signal to prevent distortion (page 93).
   - DIMMER – Dims or brightens the display (page 93).
   - CH LEVEL – Press repeatedly to select a channel, then use →/← to adjust the level (page 126).

   Press TUNER first to access:
   - D.ACCESS – After pressing, you can access a radio station directly using the number buttons (page 56).
   - CLASS – Switches between the seven banks (classes) of radio station presets (page 56).

4  TV CONTROL buttons
   These buttons are dedicated to control the TV assigned to the TV operation selector switch. Thus if you only have one TV to hook up to this system assign it to the TV operation selector switch (see page 106 for more on this).
   - ○ – Use to turn on/off the power of the TV.
   - INPUT – Use to select the TV input signal.
   - CH +/– – Use to select channels.
   - VOL +/– – Use to adjust the volume on your TV.

5  Tuner/component control buttons/HOME MENU
   These button controls can be accessed after you have selected the corresponding input function button (DVD, DVR, TV, etc.). The BAND and T.EDIT tuner controls are explained on page 56 and page 57.

The remote has been conveniently color-coded according to component control using the following system:
   - White – Receiver control, TV Control
   - Blue – Other controls
Press **RECEIVER** first to access:

**AUDIO PARAMETER** – Use to access the Audio options (page 88).

**VIDEO PARAMETER** – Use to access the Video options (page 90).

**HOME MENU** – Use to access the Home Menu (pages 45, 48, 85, 109, 118, 121, 123 and 128).

**RETURN** – Press to confirm and exit the current menu screen (also use to return to the previous menu with DVDs or to select closed captioning with DTV).

6 **TUNE/PRESET** /ENTER

Use the arrow buttons when setting up your surround sound system (see page 109) and the Audio or Video options (page 88 or 90). Also used to control DVD menus/options and for deck 1 of a double cassette deck player.

Use **TUNE** to find radio frequencies and use **PRESET** to find preset stations (page 56).

7 **Component/Receiver control buttons**

The main buttons (►, ■, etc.) are used to control a component after you have selected it using the input function buttons.

The controls above these buttons can be accessed after you have selected the corresponding input function button (for example DVD, DVR or TV). These buttons also function as described below.

Press **TUNER** first to access:

**MPX** – Switches between stereo and mono reception of FM broadcasts. If the signal is weak, then switching to mono will improve the sound quality (page 56).

**NOISE CUT MODE 1** or **2** can be selected when this unit is receiving AM broadcasts.

Press **RECEIVER** first to access:

**AUTO/ALC/DIRECT** – Switches between Auto Surround (page 61), Auto level control, Optimum Surround mode and Stream Direct mode (page 65).

**STEREO** – Switches between stereo playback and Front Stage Surround Advance modes (page 65).

**STANDARD** – Press for Standard decoding and to switch between the various Pro Logic IIx and Neo:6 options (page 62).

**ADV SURR** – Use to switch between the various surround modes (page 63).

**THX** – Press to select a Home THX listening mode (page 63).

**PHASE CTRL** – Press to switch on/off Phase Control or Full Band Phase Control (page 68).

**STATUS** – Press to check selected receiver settings (page 94).

**PQLS** – Press to select PQLS setting (page 86).

8 **AUDIO** – Changes the audio or channel on DVD or BD discs.

**DISP** – Switches between named station presets and radio frequencies.

**CH +/-** – Use to select channels for DVD/DVR units.

9 **REMOTE SETUP**

Use to input the preset code when making remote control settings and to set the remote control mode (page 103).

10 **TV CTRL**

Use this button to set preset code of your TV’s manufacturer when controlling TV (see Selecting preset codes directly on page 103 for more on this).

11 **MULTI-ZONE operation selector switch**

Switch to perform operations in the main zone, ZONE 2 and ZONE 3 (page 92).

12 **Remote control LED**

Lights when a command is sent from the remote control (page 103).

13 **SOURCE**

Press to turn on/off other components connected to the receiver (see page 103 for more on this).

14 **MASTER VOLUME +/-**

Use to set the listening volume.

15 **MUTE**

Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).

16 **RECEIVER**

Switches the remote to control the receiver (used to select the white commands above the number buttons (A.ATT, etc.)). Also use this button to set up surround sound.

17 **SOURCE**

Press to turn on/off the illumination of some of the buttons.
Controls and displays

Front panel

1 **STANDBY/ON**
Switches the receiver between on and standby. Power indicator lights when the receiver is on.
When the **KURO LINK** function is set to **ON**, the power indicator lights when the power is in standby.

2 **INPUT SELECTOR dial**
Use to select an input function (page 50).

3 **PHASE CONTROL indicator** – Lights to indicate Phase Control or Full Band Phase Control is selected (page 68).

**ADVANCED MCACC indicator** – Lights when **EQ** is set to **ON** in the **AUDIO PARAMETER** menu (page 88).

**PQLS indicator** – Lights when the PQLS feature is active (page 86).

**HDMI indicator** – Blinks when connecting an HDMI-equipped component; lights when the component is connected (page 29).
4 **Remote sensor**
Receives the signals from the remote control (see **Operating range of remote control unit** on page 11).

5 **Character display**
See **Display** on page 18.

6 **MASTER VOLUME dial**

7 **Front panel controls**
To access the front panel controls, push gently on the lower third portion of the panel with your finger.

8 **AUDIO PARAMETER**
Use to access the Audio options (page 88).

9 **VIDEO PARAMETER**
Use to access the Video options (page 90).
10 TUNE/\(\uparrow\)/\(\downarrow\)/PRESET/ENTER
Use the arrow buttons when setting up your HOME MENU. Use TUNE \(\uparrow\)/\(\downarrow\) to find radio frequencies and use PRESET \(\leftrightarrow\) to find preset stations (page 56).

11 TUNER EDIT
Use with TUNE \(\uparrow\)/\(\downarrow\)/PRESET/ENTER to memorize and name stations for recall (page 56).

12 BAND
Switches between AM and FM radio bands (page 56).

13 Listening mode buttons
AUTO SURR/ALC/STREAM DIRECT – Switches between Auto Surround (page 61), Auto level control, Optimum Surround mode and Stream Direct mode (page 66).
HOME THX – Press to select a Home THX listening mode (page 63).
STANDARD SURROUND – Press for Standard decoding and to switch between the various Pro Logic IIX and Neo:6 options (page 62).
ADVANCED SURROUND – Use to switch between the various surround modes (page 63). STEREO – Switches between stereo playback and Front Stage Surround Advance modes (page 65).

14 MULTI-ZONE controls
If you’ve made MULTI-ZONE connections (see MULTI-ZONE setup on page 38) use these controls to control the sub zone from the main zone (see Using the MULTI-ZONE controls on page 91).

15 SPEAKERS
Use to change the speaker system (page 91).

16 HOME MENU
Press to access the Home Menu (pages 45, 48, 85, 109, 118, 121, 123 and 128).

17 RETURN
Press to confirm and exit the current menu screen.

18 HDMI input connector
Use for connection to compatible HDMI device (Video camera, etc.). See Connecting an HDMI-equipped component to the front panel input on page 42.

19 iPod/iPhone/USB terminals
Use to connect your Apple iPod as an audio and video source, or connect a USB device for audio and photo playback (page 43).

20 MCACC SETUP MIC jack
Use to connect the supplied microphone (page 46).

21 PHONES jack
Use to connect headphones. When the headphones are connected, there is no sound output from the speakers.

Display

1 SIGNAL indicators
Light to indicate the currently selected input signal. AUTO lights when the receiver is set to select the input signal automatically (page 68).

2 Program format indicators
Light to indicate the channels being input when PCM signals are being input. They do not indicate the audio signals being output from the receiver.
L/R – Left front/Right front channel
C – Center channel
SL/SL – Left surround/Right surround channel

3 Digital format indicators
Light when a signal encoded in the corresponding format is detected.

4 S.RTRV
Lights when the Sound Retriever function is active (page 88).

LFE – Low frequency effects channel (the \(\langle\rangle\) indicators light when an LFE signal is being input)
XL/XR – Two channels other than the ones above
XC – Either one channel other than the ones above, the mono surround channel or matrix encode flag
## Controls and displays

5 **MULTI-ZONE**
Lights when the MULTI-ZONE feature is active (page 91).

6 **DSD PCM** – Light during DSD (Direct Stream Digital) to PCM conversion with SACDs.
**PCM** – Lights during playback of PCM signals.

7 **FULL BAND**
Lights when the Full Band Phase Control is switched on (page 69).

8 **Listening mode indicators**
- **AUTO SURROUND** – Lights when the Auto Surround feature is switched on (page 61).
- **ALC** – Lights when the ALC (Auto level control) mode is selected (page 65).
- **STREAM DIRECT** – Lights when Direct/Pure Direct is selected (page 65).
- **ADV.SURROUND** – Lights when one of the Advanced Surround modes has been selected (page 63).
- **STEREO** – Lights when stereo listening is switched on (page 64).
- **STANDARD** – Lights when one of the Standard Surround modes is switched on (page 62).
- **THX** – Lights when one of the Home ThX modes is selected (page 63).

9 **(PHASE CONTROL)**
Lights when the Phase Control or Full Band Phase Control is switched on (page 68).

10 **Analog signal indicators**
Light to indicate reducing the level of an analog signal (page 93).

11 **UP MIX**
Lights when the Up Mix is switched on (page 67).

12 **Tuner indicators**
- **TUNED** – Lights when a broadcast is being received.
- **STEREO** – Lights when a stereo FM broadcast is being received in auto stereo mode.
- **MONO** – Lights when the mono mode is set using MPX.

13 **SOUND**
Lights when any of the Midnight, Loudness or tone controls feature is selected (page 88). Lights when Dialog Enhancement is switched on.

14 **Lights when the sound is muted (page 16).**

15 **Master volume level**
Shows the overall volume level.
“---” indicates the minimum level, and “+12dB” indicates the maximum level.

16 **Input function indicators**
Light to indicate the input function you have selected.

17 **Scroll indicators**
Light when there are more selectable items when making the various settings.

18 **Speaker indicators**
Lights to indicate the current speaker system, A and/or B (page 91).

19 **SLEEP**
Lights when the receiver is in sleep mode (page 93).

20 **Matrix decoding format indicators**
- **PRO LOGIC IIx** – This lights to indicate Pro Logic II / Pro Logic IIX decoding (page 62).
- **Neo:6** – When one of the Neo:6 modes of the receiver is on, this lights to indicate Neo:6 processing (page 62).

21 **MSTR**
Lights during playback of DTS-HD Master Audio signal.

22 **Character display**
Displays various system information.

23 **Remote control mode indicator**
Lights to indicate the receiver’s remote control mode setting. (Not displayed when set to 1.) (SC-27: page 96, SC-25: page 103)
Chapter 3: Connecting your equipment

This receiver provides you with many connection possibilities, but it doesn’t have to be difficult. This page explains the kinds of components you can connect to make up your home theater system.

Important
• Illustration shows the SC-27, however connections for the SC-25 are the same except where noted.

Rear panel

CAUTION
• Before making or changing the connections, switch off the power and disconnect the power cord from the power outlet. Plugging in should be the final step.
• To avoid hum, do not lay connected cables over the top of the receiver.

1 HDMI connectors (x6)
Multiple inputs and two outputs for high-quality audio/video connection to compatible HDMI devices.
→ See Connecting your TV and playback components on page 29.
→ See Switching the HDMI output on page 94.

2 LAN (10/100) terminal
→ See Playback with HOME MEDIA GALLERY inputs on page 71.

3 XM Radio input
→ See Connecting an XM Radio tuner on page 37.

4 Coaxial digital audio inputs (x3 (SC-27), x2 (SC-25))
Use for digital audio sources, including DVD players/recorders, digital satellite receivers, CD players, etc.
→ See also The Input Setup menu on page 48 to assign the inputs.

5 Optical digital audio inputs (x4)/outputs (x2)
Use the OUT jack for recording to a CD or MiniDisc recorder.
→ See Connecting other audio components on page 35. Use the IN jacks for digital audio sources, including DVD players/recorders, digital satellite receivers, CD players, etc.
→ See also The Input Setup menu on page 48 to assign the inputs.

6 12 V trigger jacks (total 50 mA max.) (x2)
Use to switch components in your system on and off according to the input function of the receiver.
→ See Switching components on and off using the 12 volt trigger on page 41.
Connecting your equipment

7 SIRIUS Radio input
See Connecting a SiriusConnect™ tuner on page 37.

8 Remote inputs/output
Use for connection to an external remote control sensor for use in a MULTI-ZONE setup, for example.
See Connecting an IR receiver on page 40.

9 Control input/output
Use to connect other Pioneer components so that you can control all your equipment from a single IR remote sensor.
See Operating other Pioneer components with this unit’s sensor on page 40.

10 RS-232C connector
Use for connection to a PC for graphical output when using Advanced MCACC or Full Band Phase Control.
See Connecting a PC for Advanced MCACC output on page 41.

11 Component video inputs (x3)
Use the inputs to connect any video source that has component video output, such as a DVD player.
See Connecting your DVD player with no HDMI output on page 30.

12 SC-27 only: ZONE 2 component video output
Use to connect monitors or TVs in a separate room.
See MULTI-ZONE setup on page 38.

13 MULTI-ZONE audio/video outputs
Use to connect a second or third amplifier and monitors or TVs in a separate room.
See MULTI-ZONE setup on page 38.

14 Composite, S-Video and Component video monitor outputs
Use to connect monitors and TVs.
See Connecting your TV with no HDMI input on page 31.

15 Stereo analog audio source inputs (x3)/output (x1)
Use for connection to audio sources such as CD players, tape decks, turntables, etc.
See Connecting other audio components on page 35.

16 Audio/video source inputs (x5)/output (x1)
Use for connection to audio/visual sources, such as DVD players/recorders, VCRs, etc. Each set of inputs has jacks for composite video, S-Video and stereo analog audio.
See Connecting an HDD/DVD recorder, VCR and other video sources on page 33.

17 AM and FM antenna terminals
Use to connect indoor or outdoor antennas for radio broadcasts.
See Connecting AM/FM antennas on page 36.

18 Multichannel pre-amplifier outputs
Use to connect separate amplifiers for front, center, surround, surround back and subwoofer channels.
See Connecting additional amplifiers on page 36 (see also Installing your speaker system on page 25 for powered subwoofer connection).

19 Multichannel analog audio inputs
7.1 channel inputs for connection to a DVD player with multichannel analog outputs.
See Connecting the multichannel analog inputs on page 34.

20 Speaker terminals
Use for connection to the main front, center, surround and surround back speakers.
See Connecting the speakers on page 24.

21 AC power inlet
Connect the supplied power cord here.
See Plugging in the receiver on page 44.
Determining the speakers’ application

Surround sound with a strong sense of presence can be enjoyed by connecting 7 speakers and 1 subwoofer. It is also possible to achieve high sound quality using bi-amp connections and to enjoy music in other rooms using the MULTI-ZONE feature. High sound quality can be achieved with a minimum of two speakers.

- Be sure to connect speakers to the front left and right channels (L and R).
- The Surr Back System setting must be made if you use any of the connections shown below other than [1] (see Selecting the Surr Back system on page 27).

[1] 7.1ch surround connection
(Simple connection & Best surround)
*Default setting

These connections prioritize surround sound with a speaker layout like that in a movie theater.

- **Surr Back System setting: Normal (default)**
- If you have six speakers, either only connect one surround back speaker (6.1 ch surround), or connect for the 7.1-channel setting as shown on the diagram below but without the center speaker.

![Diagram of 7.1ch surround connection](image)

[2] 5.1ch surround & Front Bi-amping connection
(High quality surround)

Bi-amping the front speakers for high sound quality with 5.1-channel surround sound.

- **Surr Back System setting: Front Bi-Amp**

![Diagram of 5.1ch surround & Front Bi-amping connection](image)

[3] 5.1ch surround & ZONE 2 connection
(Multi Zone)

With these connections you can simultaneously enjoy 5.1-channel surround sound in the main zone with stereo playback on another component in ZONE 2. (The selection of input devices is limited.)

- **Surr Back System setting: ZONE 2**

![Diagram of 5.1ch surround & ZONE 2 connection](image)

[4] 5.1ch surround & Speaker B connection

With these connections you can simultaneously enjoy 5.1-channel surround sound in the main zone with stereo playback of the same sound on the B speakers.

- **Surr Back System setting: Speaker B**

![Diagram of 5.1ch surround & Speaker B connection](image)

Other speaker connection

- Your favorite speaker connections can be selected even if you have fewer than 5.1 speakers.
- When not connecting a subwoofer, connect speakers with low frequency reproduction capabilities to the front channel. (The subwoofer’s low frequency component is played from the front speakers, so the speakers could be damaged.)
- After connecting, be sure to conduct the Auto MCACC (speaker environment setting) procedure. See Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46.

*Bi-amp compatible speaker
Connecting your equipment

Placing the speakers
To achieve the best possible surround sound, install your speakers as shown below.

5.1 channel surround system:

6.1 channel surround system:

7.1 channel surround system:

THX speaker system setup
If you are using a THX certified subwoofer use the THX INPUT jack on the subwoofer (if your subwoofer has one) or switch the filter position to THX on your subwoofer.

See also THX Audio Setting on page 127 to make the settings that will give you the best sound experience when using the Home THX modes (page 63).

Some tips for improving sound quality
Where you put your speakers in the room has a big effect on the quality of the sound. The following guidelines should help you to get the best sound from your system.

- The subwoofer can be placed on the floor. Ideally, the other speakers should be at about ear-level when you’re listening to them. Putting the speakers on the floor (except the subwoofer), or mounting them very high on a wall is not recommended.

- For the best stereo effect, place the front speakers 2 m to 3 m (6 ft. to 9 ft.) apart, at equal distance from the TV.

- If you’re using a center speaker, place the front speakers at a wider angle. If not, place them at a narrower angle.

- Place the center speaker above or below the TV so that the sound of the center channel is localized at the TV screen. Also, make sure the center speaker does not cross the line formed by the leading edge of the front left and right speakers.

- It is best to angle the speakers towards the listening position. The angle depends on the size of the room. Use less of an angle for bigger rooms.

- Surround and surround back speakers should be positioned 60 cm to 90 cm (2 ft. to 3 ft.) higher than your ears and tilted slight downward. Make sure the speakers don’t face each other. For DVD-Audio, the speakers should be more directly behind the listener than for home theater playback.

- If the surround speakers cannot be set directly to the side of the listening position with a 7.1-channel system, the surround effect can be enhanced by turning off the Up Mix function (see Setting the Up Mix function on page 67).

- Try not to place the surround speakers farther away from the listening position than the front and center speakers. Doing so can weaken the surround sound effect.
Connecting the speakers

Each speaker connection on the receiver comprises a positive (+) and negative (–) terminal. Make sure to match these up with the terminals on the speakers themselves.

**CAUTION**
- These speaker terminals carry HAZARDOUS LIVE voltage. To prevent the risk of electric shock when connecting or disconnecting the speaker cables, disconnect the power cord before touching any uninsulated parts.
- Make sure that all the bare speaker wire is twisted together and inserted fully into the speaker terminal. If any of the bare speaker wire touches the back panel it may cause the power to cut off as a safety measure.

**Bare wire connections**
1. Twist exposed wire strands together. *(fig. A)*
2. Loosen terminal and insert exposed wire. *(fig. B)*
3. Tighten terminal. *(fig. C)*

**Banana plug connections**
If you want to use speaker cables terminated with banana plugs, screw the speaker terminal fully shut, then plug the banana plug into the end of the speaker terminal.

**Important**
- Please refer to the manual that came with your speakers for details on how to connect the other end of the speaker cables to your speakers.
- Use an RCA cable to connect the subwoofer. It is not possible to connect using speaker cables.
Installing your speaker system

At the very least, front left and right speakers only are necessary. Note that your main surround speakers should always be connected as a pair, but you can connect just one surround back speaker if you like (it must be connected to the left surround back terminal).

Standard 5.1/6.1/7.1-channel surround connections

- The surround back terminals can also be used for the Speaker B and ZONE 2.
- 7.1 ch surround setting
  - Surround back left
  - Surround back right
  - 6.1 ch surround setting
  - No connect

Speaker B setting
  - Speaker B - Left
  - Speaker B - Right

ZONE 2 setting
  - ZONE 2 - Left
  - ZONE 2 - Right

12V TRIGGER

Cables can be used for the speaker terminals.

Connecting your equipment
Bi-amping is when you connect the high frequency driver and low frequency driver of your speakers to different amplifiers for better crossover performance. Your speakers must be bi-ampable to do this (having separate terminals for high and low) and the sound improvement will depend on the kind of speakers you’re using.

**CAUTION**

- Most speakers with both **High** and **Low** terminals have two metal plates that connect the **High** to the **Low** terminals. These must be removed when you are bi-amping the speakers or you could severely damage the amplifier. See your speaker manual for more information.
- If your speakers have a removable crossover network, make sure you do not remove it for bi-amping. Doing so may damage your speakers.

**Bi-wiring your speakers**

Your speakers can also be bi-wired if they support bi-amping.
- With these connections, the **Surr Back System** setting makes no difference.
- To bi-wire a speaker, connect two speaker cords to the speaker terminal on the receiver. Using a banana plug for the second connection is recommended.

**CAUTION**

- Don’t connect different speakers from the same terminal in this way.
- When bi-wiring as well, heed the cautions for bi-amping shown at the left.
Connecting your equipment

Selecting the Surr Back system
The surround back terminals can be used for bi-amping, Speaker B and ZONE 2 connections, in addition to for the surround back speakers. Make this setting according to the application.

ZONE 2 setup
With these connections you can simultaneously enjoy 5.1-channel surround sound in the main zone with stereo playback on another component in ZONE 2.

1 Connect a pair of speakers to the surround back speaker terminals.
   See Standard 5.1/6.1/7.1-channel surround connections on page 25.

2 Select 'ZONE 2' from the Surr Back System menu.
   See Surround back speaker setting on page 124 to do this.

Speaker B setup
You can listen to stereo playback in another room.

1 Connect a pair of speakers to the surround back speaker terminals.
   See Standard 5.1/6.1/7.1-channel surround connections on page 25.

2 Select 'Speaker B' from the Surr Back System menu.
   See Surround back speaker setting on page 124 to do this.

Bi-Amping setup
Bi-amping connection of the front speakers for high sound quality with 5.1-channel surround sound.

1 Connect Bi-amp compatible speakers to the front and surround back speaker terminals.
   See Bi-amping your speakers on page 26.

2 Select 'Front Bi-Amp' from the Surr Back System menu.
   See Surround back speaker setting on page 124 to do this.

About the audio connection
There are several types of audio input and output terminals on this receiver. The receiver selects the first available signal in the following order when you choose AUTO as the input signal:

<table>
<thead>
<tr>
<th>Types of cables and terminals</th>
<th>Transferable audio signals</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDMI</td>
<td>HD audio</td>
</tr>
<tr>
<td>Digital (Coaxial)</td>
<td>Conventional digital audio</td>
</tr>
<tr>
<td>Digital (Optical)</td>
<td></td>
</tr>
<tr>
<td>RCA (Analog) (White/Red)</td>
<td>Conventional analog audio</td>
</tr>
</tbody>
</table>

- With an HDMI cable, video and audio signals can be transferred in high quality over a single cable.

**CAUTION**
- When connecting optical cables, be careful when inserting the plug not to damage the shutter protecting the optical socket.
- When storing optical cable, coil loosely. The cable may be damaged if bent around sharp corners.
About the video converter

The video converter ensures that all video sources are output through all of the MONITOR OUT jacks. The only exception is HDMI; since this resolution cannot be downsampled, you must connect your monitor/TV to the receiver’s HDMI video outputs when connecting this video source. If several video components are assigned to the same input function (see The Input Setup menu on page 48), the converter gives priority to HDMI, component, S-Video, then composite (in that order).

Note

1  If the video signal does not appear on your TV or flat panel TV, try adjusting the resolution settings on your component or display. Note that some components (such as video game units) have resolutions that may not be converted. In this case, try switching Digital Video Conversion (in Setting the Video options on page 90) OFF.

The signal input resolutions that can be converted from the component video input for the HDMI output are 480i/576i, 480p/576p, 720p and 1080i. 1080p signal cannot be converted.

Only signals with an input resolution of 480i/576i can be converted from the component video input for the composite and S-Video MONITOR OUT.

Note

• For optimal video performance, THX recommends switching Digital Video Conversion (in Setting the Video options on page 90) OFF.
Connecting your equipment

Connecting your TV and playback components

Connecting using HDMI

If you have an HDMI or DVI (with HDCP) equipped component (Blu-ray disc player, etc.), you can connect it to this receiver using a commercially available HDMI cable. If the TV and playback components support the Pioneer KURO LINK feature, the convenient KURO LINK functions can be used (see KURO LINK on page 84).

- When connecting a Blu-ray disc player, connect the player to the receiver’s BD IN terminal.
- When connecting to an HDMI/DVI-compatible monitor or a flat panel TV using the HDMI OUT 2 terminal, switch the HDMI output setting to HDMI OUT 2 or HDMI OUT ALL. See Switching the HDMI output on page 94.
- The HDMI indicator lights on the front panel when an HDMI-equipped component is connected.
- For input components, connections other than HDMI connections are also possible (see Connecting your DVD player with no HDMI output on page 30).
- If your Blu-ray disc player offers multi-channel analog audio outputs, see Connecting the multichannel analog inputs on page 34.
- The sound of the TV cannot be heard over the receiver if the TV is connected using an HDMI cable. If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables.
Connecting your DVD player with no HDMI output

This diagram shows connections of a TV (with HDMI input) and DVD player (or other playback component with no HDMI output) to the receiver.

- If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables.
- Component video should give superior picture quality when compared to composite or S-Video. You can also take advantage of progressive scan video (if your source and TV are both compatible), which delivers a very stable, flicker-free picture. See the manuals that came with your TV and source component to check whether they are compatible with progressive-scan video.
- If your DVD player offers multi-channel analog audio outputs, see Connecting the multichannel analog inputs on page 34.
Connecting your TV with no HDMI input

This diagram shows connections of a TV (with no HDMI input) and DVD player (or other playback component) to the receiver.

- With these connections, the picture is not output to the TV even if the DVD player is connected with an HDMI cable. Connect the DVD player’s video signals using a composite, S-VIDEO or component cord.
- Connect using an HDMI cable to listen to HD audio on the receiver. Do not use an HDMI cable to input video signals. Depending on the video component, it may not be possible to output signals connected by HDMI and other methods simultaneously, and it may be necessary to make output settings. Please refer to the operating instructions supplied with your component for more information.
- Component video should give superior picture quality when compared to composite or S-Video. You can also take advantage of progressive scan video (if your source and TV are both compatible), which delivers a very stable, flicker-free picture. See the manuals that came with your TV and source component to check whether they are compatible with progressive-scan video.
- If your DVD player has multichannel analog outputs, you can connect these instead. See also see Connecting the multichannel analog inputs on page 34.
The input functions below are assigned by default to the receiver’s different input terminals. Refer to The Input Setup menu on page 48 to change the assignments if other connections are used.

For example, the BD terminal is fixed to BD input; no other audio and video signals can be input to this terminal.

### About HDMI

The HDMI connection transfers uncompressed digital video, as well as almost every kind of digital audio that the connected component is compatible with, including DVD-Video, DVD-Audio, SACD, Dolby Digital Plus, Dolby TrueHD, DTS-HD Master Audio (see below for limitations), Video CD/Super VCD and CD. See About the video converter on page 28 for more on HDMI compatibility.

This receiver incorporates High-Definition Multimedia Interface (HDMI™) technology.

This receiver supports the functions described below through HDMI connections:

- Digital transfer of uncompressed video (contents protected by HDCP (1080p/24, 1080p/60, etc.))
- Deep Color signal transfer
- x.v.Color signal transfer
- Input of multi-channel linear PCM digital audio signals (192 kHz or less) for up to 8 channels
- Input of the following digital audio formats:
  - Dolby Digital, Dolby Digital Plus, DTS, High bitrate audio (Dolby TrueHD, DTS-HD Master Audio), DVD-Audio, CD, SACD (DSD signal), Video CD, Super VCD
- Synchronized operation with components using the KURO LINK function (see KURO LINK on page 84)

HDMI, the HDMI logo and High-Definition Multimedia Interface are trademarks or registered trademarks of HDMI Licensing, LLC.

“x.v.Color” and x.v.Color logo are trademarks of Sony Corporation.

a.SC-27 only

---

**Note**

1. An HDMI connection can only be made with DVI-equipped components compatible with both DVI and High Bandwidth Digital Content Protection (HDCP). If you choose to connect to a DVI connector, you will need a separate adaptor (DVI→HDMI) to do so. A DVI connection, however, does not support audio signals. Consult your local audio dealer for more information.

2. If you connect a component that is not compatible with HDCP, an HDCP ERROR message is displayed on the front panel display. Some components that are compatible with HDCP still cause this message to be displayed, but so long as there is no problem with displaying video this is not a malfunction.

3. Depending on the component you have connected, using a DVI connection may result in unreliable signal transfers.

4. This receiver supports SACD, Dolby Digital Plus, Dolby TrueHD and DTS-HD Master Audio. To take advantage of these formats, however, make sure that the component connected to this receiver also supports the corresponding format.

5. Signal transfer is only possible when connected to a compatible component.
Connecting your equipment

Connecting an HDD/DVD recorder, VCR and other video sources

This receiver has two sets of audio/video inputs and outputs suitable for connecting analog or digital video devices, including HDD/DVD recorders and VCRs.

When you set up the receiver you’ll need to tell the receiver which input you connected the recorder to (see also The Input Setup menu on page 48).
Connecting your equipment

Connecting a satellite/cable receiver or other set-top box
Satellite and cable receivers, and terrestrial digital TV tuners are all examples of so-called ‘set-top boxes’.
When you set up the receiver you’ll need to tell the receiver which input you connected the set-top box to (see The Input Setup menu on page 48).

Connecting the multichannel analog inputs
For DVD Audio and SACD playback, your DVD player may have 5.1, 6.1 or 7.1 channel analog outputs (depending on whether your player supports surround back channels). Make sure that the player is set to output multichannel analog audio.

- If there is a single surround back output, connect it to the SURROUND BACK L jack on this receiver.
- To use a 5.1-channel speaker set, use the surround speakers for the surround channel, not the surround back channel.
Connecting your equipment

Connecting other audio components

This receiver has both digital and analog inputs, allowing you to connect audio components for playback. This receiver features five stereo audio-only inputs. One of these inputs have corresponding outputs for use with audio recorders.

One of the audio inputs (PHONO) is a dedicated turntable input which should not be used for any other type of component. This input also has a grounding terminal that most turntables require.

Most digital components also have analog connections. When you set up the receiver you’ll need to tell the receiver which input you connected the component to (see also The Input Setup menu on page 48).

- If you’re connecting a recorder, connect the analog audio outputs to the analog audio inputs on the recorder.

  **Turntables only:**
  - If your turntable has a grounding wire, secure it to the ground terminal on this receiver.
  - If your turntable has line-level outputs (i.e., it has a built-in phono pre-amp), connect it to the CD inputs instead.

**About the WMA9 Pro decoder**

This unit has an on-board Windows Media™ Audio 9 Professional1 (WMA9 Pro) decoder, so it is possible to playback WMA9 Pro-encoded audio using HDMI, coaxial or optical digital connection when connected to a WMA9 Pro-compatible player. However, the connected DVD player, set-top box, etc. must be able to output WMA9 Pro format audio signals through a coaxial or optical digital output.

**Note**

1. Windows Media and the Windows logo are trademarks or registered trademarks of Microsoft Corporation in the United States and/or other countries.
2. With WMA9 Pro, sound problems may occur depending on your computer system. Note that WMA9 Pro 96 kHz sources will be downsampled to 48 kHz.
Connecting additional amplifiers
This receiver has more than enough power for any home use, but it’s possible to add additional amplifiers to every channel of your system using the pre-outs. Make the connections shown below to add amplifiers to power your speakers.

- You can use the additional amplifier on the surround back channel pre-outs for a single speaker as well. In this case plug the amplifier into the left \( L \text{ (Single)} \) terminal only.
- The sound from the surround back terminals will depend on how you have configured the Surround back speaker setting on page 124.
- To hear sound only from the pre-outs, switch the speaker system to OFF, or simply disconnect any speakers that are connected directly to the receiver.

If you’re not using a subwoofer, change the front speaker setting (see Speaker Setting on page 124) to LARGE.

Connecting AM/FM antennas
Connect the AM loop antenna and the FM wire antenna as shown below. To improve reception and sound quality, connect external antennas (see Connecting external antennas below).

1. Pull off the protective shields of both AM antenna wires.
2. Push open the tabs, then insert one wire fully into each terminal, then release the tabs to secure the AM antenna wires.
3. Fix the AM loop antenna to the attached stand.
To fix the stand to the antenna, bend in the direction indicated by the arrow (fig. a) then clip the loop onto the stand (fig. b).
   - If you plan to mount the AM antenna to a wall or other surface, secure the stand with screws (fig. c) before clipping the loop to the stand. Make sure the reception is clear.
4. Place the AM antenna on a flat surface and in a direction giving the best reception.
5. Connect the FM wire antenna in the same way as the AM loop antenna.
   For best results, extend the FM antenna fully and fix to a wall or door frame. Don’t drape loosely or leave coiled up.
Connecting external antennas

To improve FM reception, connect an external FM antenna to the \textit{FM UNBAL 75 Ω}.

\begin{center}
\includegraphics[width=0.3\textwidth]{fm_antenna.png}
\end{center}

To improve AM reception, connect a 5 m to 6 m (16 ft. to 20 ft.) length of vinyl-coated wire to the \textit{AM LOOP} terminals without disconnecting the supplied AM loop antenna.

For the best possible reception, suspend horizontally outdoors.

\begin{center}
\includegraphics[width=0.3\textwidth]{am_antenna.png}
\end{center}

Connecting an XM Radio tuner

After purchasing an XM Mini-Tuner and Home Dock (both sold separately), you will also need to activate the XM Radio service to begin receiving broadcasts.

\begin{center}
\includegraphics[width=0.3\textwidth]{xm_tuner.png}
\end{center}

- For instructions on playing the XM Radio, see \textit{Listening to XM Radio} on page 57.

Connecting a SiriusConnect™ tuner

To receive SIRIUS Satellite Radio broadcasts, you will need to activate your SiriusConnect™ tuner.

\begin{center}
\includegraphics[width=0.3\textwidth]{sirius_tuner.png}
\end{center}

You will also need to connect the antenna and AC adapter to the SiriusConnect™ tuner.

- For instructions on playing the SIRIUS Radio, see \textit{Listening to SIRIUS Radio} on page 59.
MULTI-ZONE setup

This receiver can power up to three independent systems in separate rooms after you have made the proper MULTI-ZONE connections. An example MULTI-ZONE setup is shown below, but the number of MULTI-ZONE connections (and the way you choose to connect them) depends on how you want to set up your system.

Different sources can be playing in three zones at the same time or, depending on your needs, the same source can also be used. The main and sub zones have independent power (the main zone power can be off while one (or both) of the sub zones is on) and the sub zones can be controlled by the remote or front panel controls. However, you may need to specify the volume settings in ZONE Audio Setup on page 129.

Making MULTI-ZONE connections

It is possible to make these connections if you have a separate TV and speakers for your primary (ZONE 2) sub zone, and a separate TV and a separate amplifier1 (and speakers) for your secondary (ZONE 3) sub zone. You will also need a separate amplifier if you are not using the MULTI-ZONE setup using speaker terminals (ZONE 2) on page 39 for your primary sub zone. There are two primary sub zone setups possible with this system. Choose whichever works best for you.

**MULTI-ZONE listening options**

The following table shows the signals that can be output to ZONE 2 and ZONE 3:

<table>
<thead>
<tr>
<th>Sub Zone</th>
<th>Input functions available</th>
</tr>
</thead>
<tbody>
<tr>
<td>ZONE 2</td>
<td>Analog audio signals (AUDIO ZONE 2 OUT), a With video signals, b the composite video (VIDEO ZONE 2 OUT) and component video (COMPONENT VIDEO ZONE 2 OUT) signals can be output d but the S-Video signal cannot be output.</td>
</tr>
<tr>
<td>ZONE 3</td>
<td>Analog audio signals (AUDIO ZONE 3 OUT), a With video signals, b the composite video (VIDEO ZONE 3 OUT) signals can be output.</td>
</tr>
</tbody>
</table>

---

Note

1 You can’t use sound controls (such as the tone controls or Midnight listening) or any surround modes with a separate amplifier in the sub zone. You can, however, use the features available with your sub zone amplifier.
Connecting your equipment

Basic MULTI-ZONE setup (ZONE 2)
- Connect a separate amplifier to the AUDIO ZONE 2 OUT jacks and a TV monitor to the VIDEO ZONE 2 OUT jack, both on this receiver.
  You should have a pair of speakers attached to the sub zone amplifier as shown below.

MULTI-ZONE setup using speaker terminals (ZONE 2)
You must select ZONE 2 in Surround back speaker setting on page 124 to use this setup. Note that the sound in the sub zone will be temporarily interrupted when controlling the main zone (for example, changing the input function or starting playback).
- Connect a TV monitor to the VIDEO ZONE 2 OUT jack on this receiver.
  You should have a pair of speakers attached to the surround back speaker terminals as shown below.

Secondary MULTI-ZONE setup (ZONE 3)
- Connect a separate amplifier to the AUDIO ZONE 3 OUT jacks and a TV monitor to the VIDEO ZONE 3 OUT jack, both on this receiver.
  You should have a pair of speakers attached to the sub zone amplifier as shown below.

Note
1 SC-27 only: COMPONENT VIDEO ZONE 2 OUT can be used to output clear images.
Connecting your equipment

Connecting an IR receiver
If you keep your stereo components in a closed cabinet or shelving unit, or you wish to use the sub zone remote control in another zone, you can use an optional IR receiver (such as a Niles or Xantech unit) to control your system instead of the remote sensor on the front panel of this receiver.¹

1 Connect the IR receiver sensor to the IR IN jack on the rear of this receiver.

2 Connect the IR IN jack of another component to the IR OUT jack on the rear of this receiver to link it to the IR receiver. Please see the manual supplied with your IR receiver for the type of cable necessary for the connection.

Operating other Pioneer components with this unit’s sensor
Many Pioneer components have SR CONTROL jacks which can be used to link components together so that you can use just the remote sensor of one component. When you use a remote control, the control signal is passed along the chain to the appropriate component.²

1 Decide which component you want to use the remote sensor of. When you want to control any component in the chain, this is the remote sensor at which you’ll point the corresponding remote control.

2 Connect the CONTROL OUT jack of that component to the CONTROL IN jack of another Pioneer component. Use a cable with a mono mini-plug on each end for the connection.

Continue the chain in the same way for as many components as you have.

Note
¹ Remote operation may not be possible if direct light from a strong fluorescent lamp is shining on the IR receiver remote sensor window.
² If using two remote controls (at the same time), the IR receiver’s remote sensor takes priority over the remote sensor on the front panel.
Connecting your equipment

Switching components on and off using the 12 volt trigger
You can connect components in your system (such as a screen or projector) to this receiver so that they switch on or off using 12 volt triggers when you select an input function. However, you must specify which input functions switch on the trigger using the Input Setup menu on page 48. Note that this will only work with components that have a standby mode.1

- **Connect the 12 V TRIGGER jack of this receiver to the 12 V trigger of another component.**
  Use a cable with a mono mini-plug on each end for the connection.
  - The trigger maximum power is DC OUT 12 V/50 mA. After you’ve specified the input functions that will switch on the trigger, you’ll be able to switch the component on or off just by pressing the input function(s) you’ve set on page 48.

Connecting a PC for Advanced MCACC output
When using the Acoustic Calibration EQ Professional (see page 115) to calibrate the reverb characteristics of your listening room, the 3D graphs of the reverb characteristics and group delay characteristics in your listening room (before and after calibration) can be checked on a computer screen by connecting the receiver to the computer and using a special application to transfer the data. The various MCACC parameters can also be checked on the computer.

Use a commercially-available RS-232C cable to connect the RS-232C jack on your computer to the 9-pin RS-232C jack on the back panel of this receiver (the cable must be cross type, female–female).

The software to output the results is available from the support area of the Pioneer website (http://www.pioneerelectronics.com/PUSA/Home+Entertainment+Custom+Install). Instructions for using the software are also available here. If you have any questions regarding, please contact the Customer Support Division of Pioneer.

Please make sure your system meets the following requirements:

- The computer must be a PC functioning with one of the following operating systems: Microsoft® Windows® Vista Home Basic/Home Premium/Ultimate SP1, Windows® XP Professional/Home Edition SP3 or Windows® 2000 Professional SP4.
- The monitor must have a display resolution of 800 x 600 dots (SVGA) or greater.
- The computer must be equipped with at least one RS-232C port.2
- System must have internet access.

Microsoft®, Windows®, Vista, Windows®, XP and Windows®, 2000 are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

---

1 Triggered connections with up to two devices compatible with 12 volt triggers can be made with this receiver.
2 Laptops and other computers not equipped with an RS-233C port can be connected via USB port using a commercially available USB to RS-232C converter cable (USB to serial converter cable). For instructions on COM port connections and settings, contact the manufacturer of your computer.
Connecting your equipment

- Connect your computer to the RS-232C jack on the rear panel of the receiver.
  Make sure that the receiver and all connected components are switched off and disconnected from the power outlet when you do this.¹
  Use a commercially-available cable to connect the RS-232C jack on your computer to the 9-pin RS-232C jack on this receiver. See the documentation provided with the Advanced MCACC application for more information.

Connecting an HDMI-equipped component to the front panel input

There is an HDMI input terminal on the front panel. High quality pictures can be viewed via the receiver simply by connecting an HDMI-equipped video camera with a single HDMI cable. HDMI-equipped components other than video cameras can also be connected to this terminal.

- Push down on the lower portion of the front panel door to access the front panel input.
- Select this input using HDMI, INPUT SELECT (remote) or the INPUT SELECTOR dial (front panel) to select HDMI 4.

Note

¹ The various parameters, the reverb characteristics data and group delay characteristics data used for display on the computer are not cleared when the power is turned off (see Output PC on page 120).
Connecting your equipment

Connecting an iPod
This receiver has a dedicated iPod terminal that will allow you to control playback of audio or video content from your iPod using the controls of this receiver.

- Switch the receiver into standby then use the supplied iPod cable to connect your iPod to the iPod/iPhone/USB terminal on the front panel of this receiver.
  - Push down on the lower portion of the front panel door to access the iPod/iPhone/USB terminal.
  - It is also possible to connect using the cable included with the iPod, but in this case it is not possible to view pictures via the receiver.
  - For the cable connection, refer to also the operating instructions for iPod.
  - For instructions on playing the iPod, see Playing an iPod on page 51.

Connecting a USB device
It is possible to playback files using the USB interface on the front of this receiver.

- Switch the receiver into standby then connect your USB device to the USB terminal on the front panel of this receiver.
  - Push down on the lower portion of the front panel door to access the USB terminal.
  - For instructions on playing the USB device, see Playing a USB device on page 53.
Connecting your equipment

Plugging in the receiver
Only plug in after you have connected all your components to this receiver, including the speakers.

1 Plug the supplied power cord into the AC IN socket on the back of the receiver.

2 Plug the other end into a power outlet.\(^1\)

**CAUTION**
- Handle the power cord by the plug part. Do not pull out the plug by tugging the cord, and never touch the power cord when your hands are wet, as this could cause a short circuit or electric shock. Do not place the unit, a piece of furniture, or other object on the power cord or pinch the cord in any other way. Never make a knot in the cord or tie it with other cables. The power cords should be routed so that they are not likely to be stepped on. A damaged power cord can cause a fire or give you an electric shock. Check the power cord once in a while. If you find it damaged, ask your nearest Pioneer authorized independent service company for a replacement.
- Do not use any power cord other than the one supplied with this unit.
- Do not use the supplied power cord for any purpose other than that described below.
- The receiver should be disconnected by removing the mains plug from the wall socket when not in regular use, e.g., when on vacation.
- Make sure the blue \(\circ\) **STANDBY/ON** light has gone out before unplugging.

\(\text{Note}\)
\(^1\) After this receiver is connected to an AC outlet, a 2 second to 10 second HDMI initialization process begins. You cannot carry out any operations during this process. The HDMI indicator in the front panel display blinks during this process, and you can turn on this receiver once it has stopped blinking. When you set the **KURO LINK** mode to **OFF**, you can skip this process. For details about the **KURO LINK** feature, see **KURO LINK** on page 84.
Chapter 4:
Basic Setup

Important
- The procedure for setting the receiver operation mode differs for the remote controls included with the SC-27 and SC-25. For the SC-27’s remote control, set the remote control operation selector switch to RECEIVER. For the SC-25’s remote control, press the RECEIVER button. When “set the remote control to the receiver operation mode” is indicated in these instructions, use the respective procedure described above.

Changing the OSD display language (OSD Language)
The language used on the Graphical User Interface screen can be changed.
- The explanations in these operating instructions are for when English is selected for the GUI screen.

SC-27:

SC-25:

1 Switch on the receiver and your TV.
Use RECEIVER to switch on.

2 Set the remote control to the receiver operation mode, then press HOME MENU.
A Graphical User Interface (GUI) screen appears on your TV. Use ↑/↓/←→ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

3 Select ‘System Setup’ from the HOME MENU.

4 Select ‘OSD Language’ from the System Setup menu.

5 Select the desired language.
• English
• French
• German
• Italian
• Spanish
• Dutch
• Russian

6 Select ‘OK’ to change the language.

The setting is completed and the System Setup menu reappears automatically.
Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control)

The Auto MCACC Setup measures the acoustic characteristics of your listening area, taking into account ambient noise, speaker connection and speaker size, and tests for both channel delay and channel level. After you have set up the microphone provided with your system, the receiver uses the information from a series of test tones to optimize the speaker settings and equalization for your particular room, and also to calibrate the frequency-phase characteristics of the speakers connected.

Make sure you do this before moving on to Playing a source on page 50.

Important
- Make sure the microphone and speakers are not moved during the Auto MCACC Setup.
- Using the Auto MCACC Setup will overwrite any existing settings for the MCACC preset you select.
- Before using the Auto MCACC Setup, the headphones should be disconnected and the iPod/USB, HOME MEDIA GALLERY, XM or SIRIUS Radio function should not be selected as an input function.

CAUTION
- The test tones used in the Auto MCACC Setup are output at high volume.

Note
1. It may not be possible to measure correctly if the microphone is placed on a table, sofa, etc.
2. You can’t use the HOME MENU when the iPod/USB, HOME MEDIA GALLERY, XM or SIRIUS Radio input function is selected (in either the main or sub zone). When you set ZONE 2, ZONE 3 or ZONE 2&3 to ON (page 91), you can’t use the HOME MENU.
- If you leave the GUI screen for over five minutes, the screen saver will appear.
Basic Setup

4 Select Surr Back System setting, then select an MCACC preset, then select START. Select Normal (Surround back), Speaker B, Front Bi-Amp or ZONE 2 for the Surr Back System setting according to connections to the surround back speaker terminals.

5 Follow the instructions on-screen.

6 Wait for the test tones to finish, then confirm the speaker configuration in the GUI screen.

A progress report is displayed on-screen while the receiver outputs test tones to determine the speakers present in your setup. Try to be as quiet as possible while it’s doing this.

If no operations are performed for 10 seconds while the speaker configuration check screen is being displayed, the Auto MCACC Setup will resume automatically. In this case, you don’t need to select OK and press ENTER in step 7.

- With error messages (such as Too much ambient noise! or Check microphone.) select RETRY after checking for ambient noise (see Problems when using the Auto MCACC Setup below) and verifying the microphone connection. If there doesn’t seem to be a problem, you can simply select GO NEXT and continue.

- If you see an ERR message (or the speaker configuration displayed isn’t correct), there may be a problem with the speaker connection. If selecting RETRY doesn’t work, turn off the power and check the speaker connections. If there doesn’t seem to be a problem, you can simply use ↑/↓ to select the speaker and →/← to change the setting and continue.

If Reverse Phase is displayed, the speaker’s wiring (+ and −) may be inverted. Check the speaker connections.

- If the connections were wrong, turn off the power, disconnect the power cord, then reconnect properly. After this, perform the Full Auto MCACC procedure again.

- If the connections were right, select GO NEXT and continue.

7 Make sure ‘OK’ is selected, then press ENTER.

A progress report is displayed on-screen while the receiver outputs more test tones to determine the optimum receiver settings for Channel Level, Speaker Distance, Standing Wave, Acoustic Cal EQ and Full Band Phase Control.

Again, try to be as quiet as possible while this is happening. It may take 3 to 10 minutes.

8 The Auto MCACC Setup procedure is completed and the Home Menu menu reappears automatically.

Be sure to disconnect the microphone from this receiver upon completion of the Auto MCACC Setup.

The settings made in the Auto MCACC Setup should give you excellent surround sound from your system, but it is also possible to adjust these settings manually using The Advanced MCACC menu on page 109 or The system and the other setup on page 123.

The configuration shown on-screen should reflect the actual speakers you have.

Note

1 For details on the speaker layout and the Surr Back System setting, see Determining the speakers’ application on page 22.

- If you are planning on bi-amping your front speakers, or setting up a separate speaker system in another room, read through Surround back speaker setting on page 123 and make sure to connect your speakers as necessary before continuing to step 5.

- If you have THX-certified speakers, select Return, then select Auto MCACC for the THX Speaker setting. See Automatic MCACC (Expert) on page 110 for more on this.

2 The six MCACC presets are used for storing surround sound settings for different listening positions. Simply choose an unused preset for now (you can rename it later in Data Management on page 121).

3 Note that correction curves are saved only when set to SYMMETRY. Select Return, then select Auto MCACC to save other correction curves (such as ALL CH ADJ and FRONT ALIGN). See Automatic MCACC (Expert) on page 110 for more on this.

4 Do not adjust the volume during the test tones. This may result in incorrect speaker settings.

5 If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the phase (dipole speakers, reflective speakers, etc.), Reverse Phase may be displayed even if the speakers are properly connected.

6 You can also choose to view the settings from the MCACC Data Check screen. See Checking MCACC Data on page 118 for more on this.

7 Depending on the characteristics of your room, sometimes identical speakers with cone sizes of around 12 cm (5 inches) will end up with different size settings. You can correct the setting manually using the Manual speaker setup on page 124.

- The subwoofer distance setting may be farther than the actual distance from the listening position. This setting should be accurate (taking delay and room characteristics into account) and generally does not need to be changed.

- If Auto MCACC Setup measurement results are incorrect due to the interaction of the speakers and viewing environment, we recommend adjusting the settings manually.
Problems when using the Auto MCACC Setup

If the room environment is not optimal for the Auto MCACC Setup (too much background noise, echo off the walls, obstacles blocking the speakers from the microphone) the final settings may be incorrect. Check for household appliances (air conditioner, fridge, fan, etc.), that may be affecting the environment and switch them off if necessary. If there are any instructions showing in the front panel display, please follow them.

- Some older TVs may interfere with the operation of the microphone. If this seems to be happening, switch off the TV when doing the Auto MCACC Setup.

The Input Setup menu

You only need to make settings in the Input Setup menu if you didn’t hook up your digital equipment according to the default settings (see Input function default and possible settings on page 49). In this case, you need to tell the receiver what equipment is hooked up to which terminal so the buttons on the remote control correspond to the components you’ve connected.

1 Switch on the receiver and your TV. Use RECEIVER to switch on.
2 Set the remote control to the receiver operation mode, then press HOME MENU.

A Graphical User Interface (GUI) screen appears on your TV. Use 1/2/3/4/5 and ENTER to navigate through the screens and select menu items. Press RETURN to confirm and exit the current menu.

3 Select ‘System Setup’ from the HOME MENU.
4 Select ‘Input Setup’ from the System Setup menu.

5 Select the input function that you want to set up.
The default names correspond with the names next to the terminals on the rear panel (such as DVD or VIDEO1) which, in turn, correspond with the names on the remote control.

6 Select the input(s) to which you’ve connected your component.
For example, if your DVD player only has an optical output, you will need to change the DVD input function’s Digital In setting from COAX-1 (default) to the optical input you’ve connected it to. The numbering (OPT-1 to 4) corresponds with the numbers beside the inputs on the back of the receiver.

- If your component is connected via a component video cable to an input terminal other than the default, you must tell the receiver which input terminal your component is connected to, or else you may see the S-Video or composite video signals instead of the component video signals.1

7 When you’re finished, proceed to the settings for other inputs.
There are three optional settings in addition to the assignment of the input jacks:

- Input Name – You can choose to rename the input function for easier identification. Select Rename to do so, or Default to return to the system default.
- Input Skip – When set to ON, that input is skipped when selecting the input using INPUT SELECT or the front panel INPUT SELECTOR dial. (DVD and other inputs can be still be selected directly with the input function buttons.)
**Basic Setup**

- **12V Trigger1/2** – After connecting a component to one of the 12 volt triggers (see *Switching components on and off using the 12 volt trigger* on page 41), select MAIN, ZONE 2, ZONE 3 or OFF for the corresponding trigger setting to switch it on automatically along with the (main or sub) zone specified.

8 When you’re finished, press RETURN. You will return to the *System Setup* menu.

---

### Input function default and possible settings

The terminals on the receiver generally correspond to the name of one of the input functions. If you have connected components to this receiver differently from (or in addition to) the defaults below, see *The Input Setup menu* on page 48 to tell the receiver how you’ve connected up. The dots (●) indicate possible assignments.

*a. With **KURO LINK** set to **ON**, assignments cannot be made (see **KURO LINK** on page 84).

b. This assignment is fixed and cannot be changed.

c. **SC-27** only*
Basic playback

Chapter 5: Basic playback

Important
- The procedure for setting the receiver operation mode differs for the remote controls included with the SC-27 and SC-25. For the SC-27’s remote control, set the remote control operation selector switch to RECEIVER. For the SC-25’s remote control, press the RECEIVER button. When “set the remote control to the receiver operation mode” is indicated in these instructions, use the respective procedure described above.

Playing a source
Here are the basic instructions for playing a source (such as a DVD disc) with your home theater system.

SC-27:

1. Switch on your system components and receiver. Start by switching on the playback component (for example a DVD player), your TV and subwoofer (if you have one), then the receiver (press \( \text{\textcopyright Receiver} \)).
   - Make sure the setup microphone is disconnected.

SC-25:

2. Set the remote control to the receiver operation mode.
3. Select the input function you want to play. You can use the input function buttons on the remote control, INPUT SELECT, or the front panel INPUT SELECTOR dial.
4. Press AUTO/ALC/DIRECT (AUTO SURR/ALC/STREAM DIRECT) to select ‘AUTO SURROUND’ and start playback of the source.
   - If you’re playing a Dolby Digital or DTS surround sound DVD disc, you should hear surround sound. If you are playing a stereo source, you will only hear sound from the front left/right speakers in the default listening mode.
   - See also Listening to your system on page 61 for information on different ways of listening to sources.
   - It is possible to check on the front panel display whether or not multi-channel playback is being performed properly.

When using a surround back speaker, D\(\text{D+PLIIx MOVIE}\) is displayed when playing Dolby Digital 5.1 channel signals, and DTS\(\text{+Neo:6}\) is displayed when playing DTS 5.1-channel signals.

When not using a surround back speaker, DOLBY DIGITAL is displayed when playing Dolby Digital 5.1 channel signals.

If the display does not correspond to the input signal and listening mode, check the connections and settings.

5. Use the volume control to adjust the volume level. Turn down the volume of your TV so that all sound is coming from the speakers connected to this receiver.

Playing a source with HDMI connection
- Use INPUT SELECT to select the HDMI input you’ve connected to (for example, HDMI 1).
   You can also perform the same operation by using the INPUT SELECTOR dial on the front panel or by pressing HDMI on the remote control repeatedly.

Note
1. Make sure that the TV’s video input is set to this receiver (for example, if you connected this receiver to the \( \text{\textcopyright Video1} \) jacks on your TV, make sure that \( \text{\textcopyright Video1} \) input is now selected).
2. If you need to manually switch the input signal type press SIGNAL SEL (page 68).
3. You may need to check the digital audio output settings on your DVD player or digital satellite receiver. It should be set to output Dolby Digital, DTS and 88.2 kHz / 96 kHz PCM (2 channel) audio, and if there is an MPEG audio option, set this to convert the MPEG audio to PCM.
   - Depending on your DVD player or source discs, you may only get digital 2 channel stereo and analog sound. In this case, the receiver must be set to a multichannel listening mode (see Listening in surround sound on page 62 if you need to do this) if you want multichannel surround sound.
Basic playback

- Set the HDMI parameter in Setting the Audio options on page 88 to THROUGH if you want to hear HDMI audio output from your TV or flat panel TV (no sound will be heard from this receiver).
- If the video signal does not appear on your TV or flat panel TV, try adjusting the resolution settings on your component or display. Note that some components (such as video game units) have resolutions that may not be converted. In this case, use an analog video connection.
- You can’t hear HDMI audio through this receiver’s digital out jack.

Selecting the multichannel analog inputs

If you have connected a decoder or a DVD player as above, you must select the analog multichannel inputs for surround sound playback.1

1 Make sure you have set the playback source to the proper output setting.

For example, you might need to set your DVD player to output multichannel analog audio.

2 Set the remote control to the receiver operation mode, then use INPUT SELECT to select MULTI CH IN. You can also use the INPUT SELECTOR dial on the front panel.

- Depending on the DVD player you’re using, the analog output level of the subwoofer channel may be too low. In this case, the output level of the subwoofer can be increased by 10 dB in the Multi Ch In Setup in Other Setup. For details, see Multi Channel Input Setup on page 128.

Playing an iPod

This receiver has a dedicated iPod terminal that will allow you to control playback of audio content from your iPod using the controls of this receiver.2

1 Switch on the receiver and your TV. See Connecting an iPod on page 43.

Playing back audio files stored on an iPod

To navigate songs on your iPod, you can take advantage of the GUI screen of your TV connected to this receiver.4

You can also control all operations for music in the front panel display of this receiver.

Note

1 When playback from the multichannel inputs is selected, only the volume and channel levels can be set.
- You can’t listen to your speaker B system during playback from the multichannel inputs.
- With MULTI CH IN inputs, it is possible to play pictures simultaneously. For details, see Multi Channel Input Setup on page 128.

2 This system is compatible with the audio and video of the iPod nano, iPod fifth generation (audio only), iPod classic, iPod touch and iPhone. However, some of the functions may be restricted for some models. The system is not compatible with the iPod shuffle.

- Compatibility may vary depending on the software version of your iPod and iPhone. Please be sure to use the latest available software version.
- iPod and iPhone are licensed for reproduction of non-copyrighted materials or materials the user is legally permitted to reproduce.
- Features such as the equalizer cannot be controlled using this receiver, and we recommend switching the equalizer off before connecting.
- Pioneer cannot accept any responsibility for any direct or indirect loss arising from any inconvenience or loss of recorded material resulting from the iPod failure.
- When listening to a track on the iPod in the main zone, it is possible to control the sub zone, but not to listen to a different track in the sub zone from the one playing in the main zone.

3 The controls of your iPod will be inoperable when connected to this receiver.

4 Note that characters that cannot be displayed on this receiver are displayed as #.
- This feature is not available for photos or video clips on your iPod. To display video clips, switch iPod operation to the iPod (see Switching the iPod controls on page 52).
- If you leave the GUI screen for over five minutes, the screen saver will appear.

2 SC-27 only: Set the remote control operation selector switch to SOURCE.

3 Press iPod USB on the remote control to switch the receiver to the iPod/USB.

Loading appears in the GUI screen while the receiver verifies the connection and retrieves data from the iPod.

When the display shows iPod top menu you’re ready to play music from the iPod.3

Main Zone:

Sub Zone:

Playing back audio files stored on an iPod

To navigate songs on your iPod, you can take advantage of the GUI screen of your TV connected to this receiver.4

You can also control all operations for music in the front panel display of this receiver.

Note

1 When playback from the multichannel inputs is selected, only the volume and channel levels can be set.
- You can’t listen to your speaker B system during playback from the multichannel inputs.
- With MULTI CH IN inputs, it is possible to play pictures simultaneously. For details, see Multi Channel Input Setup on page 128.

2 This system is compatible with the audio and video of the iPod nano, iPod fifth generation (audio only), iPod classic, iPod touch and iPhone. However, some of the functions may be restricted for some models. The system is not compatible with the iPod shuffle.

- Compatibility may vary depending on the software version of your iPod and iPhone. Please be sure to use the latest available software version.
- iPod and iPhone are licensed for reproduction of non-copyrighted materials or materials the user is legally permitted to reproduce.

3 The controls of your iPod will be inoperable when connected to this receiver.

4 Note that characters that cannot be displayed on this receiver are displayed as #.
- This feature is not available for photos or video clips on your iPod. To display video clips, switch iPod operation to the iPod (see Switching the iPod controls on page 52).
- If you leave the GUI screen for over five minutes, the screen saver will appear.
Finding what you want to play
When your iPod is connected to this receiver, you can browse songs stored on your iPod by playlist, artist name, album name, song name, genre or composer, similar to using your iPod directly.

1. Use / to select a category, then press ENTER to browse that category.
   - To return to the previous level any time, press RETURN.

2. Use / to browse the selected category (e.g., albums).
   - Use / to move to previous/next levels.

3. Continue browsing until you arrive at what you want to play, then press ➤ to start playback.1

Main Zone:

Sub Zone:

Navigation through categories on your iPod looks like this:

Playlists ➔ Songs
Artists ➔ Albums ➔ Songs
Albums ➔ Songs
Songs
Podcasts
Genres ➔ Artists ➔ Albums ➔ Songs
Composers ➔ Albums ➔ Songs
Audiobooks
Shuffle Songs

Tip
- You can play all of the songs in a particular category by selecting the All item at the top of each category list. For example, you can play all the songs by a particular artist.

Basic playback controls
The following table shows the basic playback controls for your iPod. Press iPod USB to switch the remote control to the iPod/USB operation mode.

<table>

Switching the iPod controls2
You can switch over the iPod controls between the iPod and the receiver.

1. Press iPod CTRL to switch the iPod controls.3
   This enables operation and display on your iPod, and this receiver’s remote control and GUI screen become inactive.

2. Press iPod CTRL again to switch back to the receiver controls.

Note
- If you’re in the song category, you can also press ENTER to start playback.
- You cannot use this function, when an iPod of fifth generation or iPod nano of first generation is connected.
- When this function is set, iPod images cannot be played on this receiver. However, when video clips recorded on the iPod are played, the playback picture is displayed.
Basic playback

Playing a USB device
It is possible to playback files using the USB interface on the front of this receiver.

1 Switch on the receiver and your TV.
   See Connecting a USB device on page 43.2
2 SC-27 only: Set the remote control operation selector switch to SOURCE.
3 Press iPod USB on the remote control to switch the receiver to the iPod/USB.

Loading appears in the GUI screen as this receiver starts recognizing the USB device connected. When the display shows USB Top menu you’re ready to playback from the USB device.

Main Zone:

Sub Zone:

Important
If an Over Current message lights in the display, the power requirements of the USB device are too high for this receiver. Try following the points below:
- Switch the receiver off, then on again.
- Reconnect the USB device with the receiver switched off.

Note
1 Compatible USB devices include external magnetic hard drives, portable flash memory (particularly keydrives) and digital audio players (MP3 players) of format FAT16/32. It is not possible to connect this unit to a personal computer for USB playback.
2 Pioneer cannot guarantee compatibility (operation and/or bus power) with all USB mass storage devices and assumes no responsibility for any loss of data that may occur when connected to this receiver.
3 When a USB memory device with a large capacity is connected, it may take some time to read all the contents.
4 This receiver does not support a USB hub.
5 Note that characters that cannot be displayed on this receiver are displayed as ．
6 If the file selected cannot be played back, this receiver automatically skips to the next file playable.
7 When the file currently being played back has no title assigned to it, the file name is displayed in the GUI screen instead; when neither the album name nor the artist name is present, the row is displayed as a blank space.
8 Copyrighted audio files cannot be played back on this receiver.
9 DRM-protected audio files cannot be played back on this receiver.
10 If you leave the GUI screen for over five minutes, the screen saver will appear.

Playing back photo files stored on a USB memory device

1. Use ▶️/◀️ to select ‘Photos’ from the USB Top menu.

2. Use ▶️/◀️ to select a folder, then press ENTER to browse that folder.
   - To return to the previous level any time, press RETURN.

3. Continue browsing until you arrive at what you want to play, then press ▶️ to start playback.

The selected content is displayed in full screen and starts a slideshow.

After a slideshow launches, pressing ENTER toggles between play and pause (only when Theme on the Slideshow Setup is set to Normal (OFF)).

Basic playback controls

Button(s) | What it does
---|---
ENTER | Starts displaying a photo and playing a slideshow.
RETURN | Stops the Player and returns to the previous menu.
| Displays the previous photo content.
| Displays the next photo content.
| Pauses/unpauses the slideshow.
| Displays the photo information.

1. You can only use this button when Theme on the Slideshow Setup is set to Normal (OFF).

Slideshow Setup

Make the various settings for playing slideshows of photo files here.

1. Use ▶️/◀️ to select ‘Slideshow Setup’ from the USB Top menu.

2. Select the setting you want.
   - Theme – Add various effects to the slideshow.
   - Interval – Set the interval for switching the photos. This may not be available depending on the Theme setting.
   - BGM – Play music files stored on the USB device while displaying photos.
   - Music Select – Select the folder containing the music files to be played when BGM is set to ON.

3. When you’re finished, press RETURN. You will return to the USB Top menu.

Note

1. Photo files cannot be played in the sub zone.
2. If the slideshow is left in the pause mode for five minutes, the list screen reappears.
Basic playback

About playable file formats
The USB function of this receiver supports the following file formats. Note that some file formats are not available for playback although they are listed as playable file formats.

**Basic playback**

**Listening to the radio**

The following steps show you how to tune in to FM and AM radio broadcasts using the automatic (search) and manual (step) tuning functions. If you already know the frequency of the station you want, see **Tuning directly to a station** below. Once you are tuned to a station you can memorize the frequency for recall later—see **Saving station presets** below for more on how to do this.

**SC-27**:

1. **SC-27 only**: Set the remote control operation selector switch to **SOURCE**.
2. Press **TUNER** to select the tuner.
3. Use **BAND** to change the band (FM or AM), if necessary.
   Each press switches the band between FM and AM.
4. Tune to a station.
   There are three ways to do this:
   - **Automatic tuning** – To search for stations in the currently selected band, press and hold **TUNE** † / ‡ for about a second. The receiver will start searching for the next station, stopping when it has found one. Repeat to search for other stations.
   - **Manual tuning** – To change the frequency one step at a time, press **TUNE** † / ‡.
   - **High speed tuning** – Press and hold **TUNE** † / ‡ for high speed tuning. Release the button at the frequency you want.

**Improving FM sound**

If the **TUNED** or **STereo** indicator doesn’t light when tuning to an FM station because the signal is weak, press **MPX** to switch the receiver into mono reception mode. This should improve the sound quality and allow you to enjoy the broadcast.

**SC-25**:

5. Use the number buttons to enter the frequency of the radio station.
   For example, to tune to 106.00 (FM), press 1, 0, 6, 0, 0.
   If you make a mistake halfway through, press **D.ACCESS** twice to cancel the frequency and start over.

**Saving station presets**

If you often listen to a particular radio station, it’s convenient to have the receiver store the frequency for easy recall whenever you want to listen to that station. This saves the effort of manually tuning in each time. This receiver can memorize up to 63 stations, stored in seven banks, or classes (A to G) of 9 stations each. When saving an FM frequency, the **MPX** setting (see page 56) is also stored.

1. Tune to a station you want to memorize.
   See **Listening to the radio** above for more on this.
2. Press **T.EDIT** (TUNER EDIT).
   The display shows **PRESET MEMORY**, then a blinking memory class.
3. Press **CLASS** to select one of the seven classes, then press **PRESET** ← / → to select the station preset you want.
   You can also use the number buttons to select a station preset.

**Using the noise cut mode**

The two noise cut modes can be used when receiving AM broadcasts. Press **MPX** to select the noise cut mode (1 to 2).

**Using Neural THX**

This feature uses Neural Surround™, THX® technologies to achieve optimal surround sound from FM radio.

- While listening to FM radio, press **AUTO/ALC/DIRECT** for Neural THX listening.

See **About Neural – THX Surround** on page 147 for more on this.

The **Neural THX** mode can be selected also with **STANDARD** (page 62).

**Tuning directly to a station**

Sometimes, you’ll already know the frequency of the station you want to listen to. In this case, you can simply enter the frequency directly using the number buttons on the remote control.

1. **SC-27 only**: Set the remote control operation selector switch to **SOURCE**.
2. Press **TUNER** to select the tuner.
3. Use **BAND** to change the band (FM or AM), if necessary.
   Each press switches the band between FM and AM.
4. Press **D.ACCESS** (Direct Access).
5. Use the number buttons to enter the frequency of the radio station.
   For example, to tune to 106.00 (FM), press 1, 0, 6, 0, 0.
Press ENTER.
After pressing ENTER, the preset class and number stop blinking and the receiver stores the station.

Naming station presets
For easier identification, you can name your station presets.

1. Choose the station preset you want to name. See Listening to station presets below for how to do this.

2. Press T.EDIT (TUNER EDIT). The display shows PRESET NAME, then a blinking cursor at the first character position.

3. Input the name you want. Choose from the following characters for a name up to eight characters long:
   ABCDEFGHIJKLMNOPQRSTUVWXYZ
   abcdefghijklmnopqrstuvwxyz
   0123456789
   !"#$%&'()∗+,-./:;<=>?@[\]^_{|} ˜[space]
Use / to select a character, ↔/↔ to set the position, and ENTER to confirm your selection.

Tip
• To erase a station name, simply repeat steps 1 to 3 and input eight spaces instead of a name.
• Once you have named a station preset, you can press DISP when listening to a station to switch the display between name and frequency.

Listening to station presets
You will need to have some presets stored to do this. See Saving station presets on page 56 if you haven’t done this already.

1. SC-27 only: Set the remote control operation selector switch to SOURCE.

2. Press TUNER to select the tuner.

3. Press CLASS to select the class in which the station is stored. Press repeatedly to cycle through classes A to G.

4. Press PRESET ↔/↔ to select the station preset you want.
   • You can also use the number buttons on the remote control to recall the station preset.

Listening to Satellite Radio
To listen to Satellite Radio, you’ll need to connect either a SIRIUS or XM Satellite Radio tuner (sold separately) to your satellite-ready receiver. Satellite Radio is available to residents of the US (except Alaska and Hawaii) and Canada.

Satellite Radio delivers a variety of commercial-free music from categories ranging from Pop, Rock, Country, R&B, Dance, Jazz, Classical and many more plus coverage of all the top professional and college sports including play by play games from select leagues and teams. Additional programming includes expert sports talk, uncensored entertainment, comedy, family programming, local traffic and weather and news from your most trusted sources.

Whether you purchase a SIRIUS or XM tuner, you’ll need to activate and subscribe to begin enjoying the service. Easy to follow installation and setup instructions are provided with the satellite tuners. Whichever service you choose, there are a variety of programming packages available, including the option of adding “The Best of SIRIUS” programming to your XM tuner or “The Best of XM” programming to your SIRIUS tuner, enabling you to enjoy the most popular programming among both services. The “Best of” packages are not available to SIRIUS or XM Canada subscribers at this time.

Family friendly packages are also available to restrict channels featuring content that may be inappropriate for children.
To subscribe to XM, U.S. customers should visit xmradio.com or call 1-800-XMRADIO (1-800-967-2346); Canadian customers should visit xmradio.ca or call XM Listener Care at 1-877-GETXMSR (1-877-438-9677).
To subscribe to SIRIUS, U.S. and Canadian customers can call 1-888-539-SIRI (1-888-539-7474) or visit sirius.com (US) or siriuscanada.ca (Canada).

Listening to XM Radio
For details on XM Radio, see About SIRIUS and XM on page 148.

• Press XM to switch to the XM RADIO input.
  For best reception, you may need to move the XM Mini-Tuner antenna near a window (the southernmost window should produce the best results).
• If after pressing XM the display shows Check XM Tuner or Check Antenna, try disconnecting the receiver and tuner connections, and then plugging them back in.

Note
1 You can check the strength of reception in Using the XM Menu (page 59).
After connecting, you will be able to use this receiver to select channels and navigate categories using the GUI screen. The information displayed is as follows:

### Main Zone:

- **Life is Like a Wind**
- **Artist name**: Rie fue
- **Song name**: The Blend
- **Channel name**: XM25
- **Category**: Hits
- **Channel number**: A1

### Sub Zone:

- **Life is Like a Wind**
- **Artist name**: Rie fue
- **Song name**: The Blend
- **Channel name**: XM25
- **Category**: Hits
- **Channel number**: A1

### Tip

- You can select channels directly by pressing D.ACCESS, then the three-digit channel number.
- You can press DISP to change XM Radio information in the front panel display.
- The currently selected channel is automatically chosen (without pressing ENTER) after five seconds.

### Using XM HD Surround

XM HD Surround uses Neural Surround™, THX® technologies to achieve optimal surround sound from XM radio. XM HD Surround Sound is available on select XM channels only.

- While listening to XM Radio, press AUTO/ALC/DIRECT for XM HD Surround listening.
  - See About Neural – THX Surround on page 147 for more on this.
- XM HD Surround can be selected also with STANDARD.

### Saving channel presets

This receiver can memorize up to 63 channels, stored in seven banks, or classes (A to G) of nine channels each.

1. Select the channel you want to memorize.
   - See Selecting channels and browsing by genre above.
2. Set the remote control operation selector switch to SOURCE (SC-27 only), then press T.EDIT.
   - The display shows a blinking memory class.
3. Press CLASS to select one of the seven classes, then press / to select the channel preset you want.
   - You can also use the number buttons to select a preset.
   - The default for all presets is XM1.
4. Press ENTER.
   - After pressing ENTER, the preset class and number stop blinking and the receiver stores the XM channel.

### Tip

- You can also press MEMORY during reception display to save the information of up to five songs.
  - See Using the XM Menu below to recall this information.

### Note

1. It’s easiest if you have your TV switched on to take advantage of the GUI screens. You can, however, use just the front panel display to do everything if you prefer.
2. Select 0 (RADIO ID) from the GUI to check the Radio ID of the XM Mini-Tuner.
3. You can reset the channel presets and memory in Resetting the system on page 95.
**Basic playback**

**Listening to channel presets**

1. Set the remote control operation selector switch to SOURCE (SC-27 only), then press CLASS to select the class in which the channel is stored. Press repeatedly to cycle through classes A to G.

2. Press \( \uparrow/\downarrow \) to select the channel preset you want. You can also use the number buttons on the remote control to recall the channel preset.

**Using the XM Menu**

The XM Menu provides additional XM Radio features.1

1. Press the remote control operation selector switch to SOURCE (SC-27 only), then press TOP MENU.

2. Use \( \uparrow/\downarrow \) to select a menu item, then press ENTER. Choose from the following menu items:
   - **Channel Skip/Add** – Use \( \uparrow/\downarrow \) and ENTER to select channels you would like to remove/restore from/to the channel guide.
   - **Antenna Aiming** – Check the strength of satellite and terrestrial reception.
   - **Memory Recall** – Use \( \uparrow/\downarrow \) to browse your saved song information (see Tip on page 58).

3. When you’re finished press TOP MENU to return to the reception display.

**Listening to SIRIUS Radio**

For details on SIRIUS Radio, see About SIRIUS and XM on page 148.

- **Press SIRIUS to switch to the SIRIUS input.**
  For best reception, you may need to move the SiriusConnect™ tuner antenna near a window (refer to the manual for the SiriusConnect™ Home tuner for antenna placement recommendations).2

  - If after pressing SIRIUS the display shows Antenna Error, try disconnecting the antenna and reconnecting.3 If the display shows Check Sirius Tuner, check the connection of the AC adapter and this receiver to the SiriusConnect™ tuner.

After connecting, you will be able to use this receiver to select channels and navigate categories using the GUI screen display.4 The information displayed is as follows:

### Main Zone:

<table>
<thead>
<tr>
<th>Preset number</th>
<th>Channel name</th>
<th>Artist name</th>
<th>Category</th>
<th>Composer name</th>
<th>Signal strength</th>
</tr>
</thead>
<tbody>
<tr>
<td>123</td>
<td>Fifties (50's)</td>
<td>Chuck Berry</td>
<td>Decades</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Sub Zone:

<table>
<thead>
<tr>
<th>Preset number</th>
<th>Channel name</th>
<th>Artist name</th>
<th>Category</th>
<th>Composer name</th>
<th>Signal strength</th>
</tr>
</thead>
<tbody>
<tr>
<td>A1</td>
<td>Johnny B. Goode</td>
<td>Chuck Berry</td>
<td>Fifties (50's)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

---

**Note**

1 You can reset the Channel Skip/Add settings in Resetting the system on page 96.

2 In order to activate your radio subscription, you will need the SIRIUS ID (SID) which uniquely identifies your tuner. The SID may be found on a sticker located on the packaging, or on the bottom of the tuner itself. The label will have a printed 12-digit SID number. When you have located the SID, write it down in the space provided near the end of this manual. Contact SIRIUS on the internet at: https://activate.siriusradio.com

Follow the prompts to activate your subscription, or you can also call SIRIUS toll-free at 1-888-539-SIRIUS (1-888-539-7474).

- Select 0 (SIRIUS ID) from the on-screen display to check the Radio ID of the SiriusConnect™ tuner (see Selecting channels and browsing by genre on page 60).

3 You can check the strength of reception in Using the SIRIUS Menu on page 60.

4 It’s easiest if you have your TV switched on to take advantage of the GUI screens. You can, however, use just the front panel display to do everything if you prefer.
Basic playback

Selecting channels and browsing by genre

From the SIRIUS Channel Guide, you can browse SIRIUS Radio channels in the order that they appear, or you can narrow your channel search by genre.

1 SC-27 only: Set the remote control operation selector switch to SOURCE.

2 Press \( \uparrow/\downarrow \) to enter the SIRIUS Channel Guide, navigate through the channels one at time with \( \uparrow/\downarrow \), then press ENTER to listen to the SIRIUS radio broadcast.
   - To browse by genre, first press CATEGORY, use \( \uparrow/\downarrow \) to select a genre, then press ENTER.
   - To cancel and exit any time, press RETURN.

Tip
- You can select channels directly by pressing D.ACCESS, then the three-digit channel number.
- You can press DISP to change SIRIUS Radio information in the front panel display.
- The currently selected channel is automatically chosen (without pressing ENTER) after five seconds.

Saving channel presets

This receiver can memorize up to 63 channels, stored in seven banks, or classes (A to G) of nine channels each.\(^1\)

1 Select the channel you want to memorize. See Selecting channels and browsing by genre on page 60.

2 Set the remote control operation selector switch to SOURCE (SC-27 only), then press T.EDIT.

3 Press CLASS to select one of the seven classes, then press \( \leftrightarrow/\rightarrow \) to select the channel preset you want.

4 Press ENTER.
   After pressing ENTER, the preset class and number stop blinking and the receiver stores the SIRIUS channel.\(^1\)

Tip
- You can also press MEMORY during reception display to save the information of up to five songs. See Using the SIRIUS Menu below to recall this information.

Listening to channel presets

1 Set the remote control operation selector switch to SOURCE (SC-27 only), then press CLASS to select the class in which the channel is stored.

2 Press \( \leftrightarrow/\rightarrow \) to select the channel preset you want.
   - You can also use the number buttons on the remote control to recall the channel preset.

Using the SIRIUS Menu

The SIRIUS Menu provides additional SIRIUS Radio features.\(^2\)

1 Set the remote control operation selector switch to SOURCE (SC-27 only), then press TOP MENU.

2 Use \( \uparrow/\downarrow \) to select a menu item, then press ENTER.

Choose from the following menu items:
- Channel Skip/Add – Use \( \uparrow/\downarrow \) and ENTER to select channels you would like to remove/restore from/to the channel guide.
- Parental Lock – Use \( \uparrow/\downarrow \) and ENTER to select channels you would like to place under parental lock. Channels put under parental lock are not displayed in the Channel Guide, but may be accessed by directly inputting their channel number and providing the parental lock password.
- Antenna Aiming – Check the strength of satellite and terrestrial reception.
- Memory Recall – Use \( \uparrow/\downarrow \) to browse your saved song information (see Tip above).
- Password Set – Set the parental lock password.

3 When you’re finished press TOP MENU to return to the reception display.

Note

\(^1\) You can reset the Channel presets and memory in Resetting the system on page 95.
\(^2\) You can reset the Channel Skip/Add, Parental Lock and Password settings in Resetting the system on page 95.
Chapter 6: Listening to your system

Important

- The procedure for setting the receiver operation mode differs for the remote controls included with the SC-27 and SC-25. For the SC-27’s remote control, set the remote control operation selector switch to RECEIVER. For the SC-25’s remote control, press the RECEIVER button. When “set the remote control to the receiver operation mode” is indicated in these instructions, use the respective procedure described above.
- The listening modes and many features described in this section may not be available depending on the current source, settings and status of the receiver.

Auto playback

There are many ways to listen back to sources using this receiver, but for the simplest, most direct listening option is the Auto Surround feature. The receiver automatically detects what kind of source you’re playing and selects multichannel or stereo playback as necessary.\(^1\)

SC-27:

1. Set the remote control to the receiver operation mode.
2. While listening to a source, press AUTO/ALC/DIRECT (AUTO SURR/ALC/STREAM DIRECT)\(^2\) for auto playback of a source. AUTO SURROUND shows briefly in the display before showing the decoding or playback format. Check the digital format indicators in the front panel display to see how the source is being processed.\(^3\)
   - If the source is Dolby Digital, DTS, or Dolby Surround encoded, the proper decoding format will automatically be selected and shows in the display.
   - When listening to XM Radio, the XM HD Surround feature is selected automatically (see Using XM HD Surround on page 58 for more on this), and also when listening to the FM Radio, the Neural THX feature is selected automatically (see Using Neural THX on page 56 for more on this).

   - In the Auto level control (ALC) mode, this receiver equalizes playback sound levels.
   - In the Optimum Surround mode, this receiver automatically optimizes sound balance in each scene based on actually set volume. The sound balancer controls three major theater sound elements dialogue, bass and surround with original algorithm.

Tip

- When an ALC is selected, the effect level can be adjusted using the EFFECT parameter in Setting the Audio options on page 88.

SC-25:

Note

1. Stereo surround (matrix) formats are decoded accordingly using Neo:6 CINEMA or Pro Logic IIx MOVIE (see Listening in surround sound above for more on these decoding formats).
2. For more options using this button, see Using Stream Direct on page 65.
3. Neural THX is selected when Neural Radio is accessed with the HOME MEDIA GALLERY input. However, Stereo is selected when a category other than Neural Radio is accessed.
Listening to your system

Listening in surround sound
Using this receiver, you can listen to any source in surround sound. However, the options available will depend on your speaker setup and the type of source you’re listening to.

If you connected surround back speakers, see also Using surround back channel processing on page 66.

Standard surround sound
The following modes provide basic surround sound for stereo and multichannel sources.¹

SC-27:

1 Set the remote control to the receiver operation mode.

2 While listening to a source, press STANDARD (STANDARD SURROUND).²

If necessary, press repeatedly to select a listening mode.

With two channel sources, you can select from³:
- \( \text{\textcopyright Pro Logic llx MOVIE} \) – Up to 7.1 channel sound, especially suited to movie sources
- \( \text{\textcopyright Pro Logic llx MUSIC} \) – Up to 7.1 channel sound, especially suited to music sources⁴
- \( \text{\textcopyright Pro Logic llx GAME} \) – Up to 7.1 channel sound, especially suited to video games
- \( \text{\textcopyright Pro Logic} \) – 4.1 channel sound, especially suited to video games
- \( \text{\textcopyright Pro Logic IIx MOVIE} \) – See above (only available when you’re using two surround back speakers)
- \( \text{\textcopyright Pro Logic IIx MUSIC} \) – See above
- \( \text{\textcopyright Dolby Digital EX} \) – Creates surround back channel sound for 5.1 channel sources and provides pure decoding for 6.1 channel sources (like Dolby Digital Surround EX)
- \( \text{\textcopyright DTS-ES} \) – Allows you to hear 6.1 channel playback with DTS-ES encoded sources
- \( \text{\textcopyright DTS Neo:6} \) – Allows you to hear 6.1 channel playback with DTS encoded sources

With multichannel sources, if you have connected surround back speaker(s) and have selected SBch ON, you can select (according to format):
- \( \text{\textcopyright Pro Logic llx MOVIE} \) – See above (only available when you’re using two surround back speakers)
- \( \text{\textcopyright Pro Logic llx MUSIC} \) – See above
- \( \text{\textcopyright Dolby Digital EX} \) – Creates surround back channel sound for 5.1 channel sources and provides pure decoding for 6.1 channel sources (like Dolby Digital Surround EX)
- \( \text{\textcopyright DTS-ES} \) – Allows you to hear 6.1 channel playback with DTS-ES encoded sources
- \( \text{\textcopyright DTS Neo:6} \) – Allows you to hear 6.1 channel playback with DTS encoded sources

Note
1 In modes that give 6.1 channel sound, the same signal is heard from both surround back speakers.
2 The STANDARD listening mode cannot be selected in the following cases:
   - When headphones are plugged in.
   - When MULTI CH IN input is selected.
   - When the HDMI audio output parameter is set to THROUGH in Setting the Audio options on page 88.
3 If surround back channel processing (page 66) is switched OFF, or the surround back speakers are set to NO (this happens automatically if the Surround back speaker setting on page 124 is set to anything but Normal), \( \text{\textcopyright Pro Logic llx} \) becomes \( \text{\textcopyright Pro Logic II} \) (5.1 channel sound).
4 When listening to 2-channel sources in Dolby Pro Logic llx Music mode, there are three further parameters you can adjust: C.WIDTH, DIMENSION and PANORAMA. See Setting the Audio options on page 88 to adjust them.
5 When listening to 2-channel sources in Neo:6 Cinema or Neo:6 Music mode, you can also adjust the center image effect (see Setting the Audio options on page 88).
6 \( \text{\textcopyright Neural THX} \) can be selected for 2-channel signals for which the input signal is PCM (48 kHz or less), Dolby Digital, DTS or analog 2-channel sources.
7 XM HD Surround can be selected only with the XM input.
Listening to your system

Using the Home THX modes
THX and Home THX are technical standards created by THX Ltd. for cinema and home theater sound. Home THX is designed to make home theater audio sound more like what you hear in a cinema.
Different THX options will be available depending on the source and the setting for surround back channel processing (see Using surround back channel processing on page 66 for more on this).

SC-27:

1. Set the remote control to the receiver operation mode.

2. Press THX (HOME THX) to select a listening mode.1

   - THX2/Select2 GAMES
     With multichannel sources, press THX (HOME THX) repeatedly to select from:3
     - THX Surround EX – Allows you to hear 6.1 or 7.1 channel playback with 5.1 channel sources4
     - Pro Logic IIx MOVIE+THX CINEMA
     - THX2/Select2 CINEMA – Allows you to hear 7.1 channel playback with 5.1 channel sources
     - Pro Logic IIx MUSIC+THX MUSIC
     - THX2/Select2 MUSIC – This mode is suited not only for sources recorded in Dolby Digital and DTS, but also to all multi-channel music sources (DVD-Audio, etc.).
     - THX2/Select2 GAMES – This mode is suited to playing the sound of games.

   The THX mode cannot be selected in the following cases:
   - When headphones are plugged in.
   - When MULTI CH IN input is selected.
   - When the HDMI audio output parameter is set to THROUGH in Setting the Audio options on page 88.
   - When playing an SACD, Neo:6 CINEMA+THX CINEMA, Neo:6 MUSIC+THX MUSIC and THX2/Select2 MUSIC can be selected.
   - If the settings other than Front and SW (Subwoofer) are set to NO at Speaker Setting, only THX CINEMA, THX MUSIC and THX GAMES can be selected.

3. THX CINEMA, THX MUSIC and THX GAMES can be selected when surround back processing is set to SBch OFF, when there is no surround back speaker, or when playing 6.1- and 7.1-channel sources.

4. When playing DTS-encoded sources, Neo:6 CINEMA+THX CINEMA can be selected, not THX Surround EX.

Note
1. When the function is set to TUNER, iPod/USB, PHONO, HOME MEDIA GALLERY, XM or SIRIUS, it is not possible to select Pro Logic IIx GAME+THX GAMES or THX Ultra2/Select2 GAME.

2. Ultra2 for the SC-27, Select2 for the SC-25.

3. Unavailable with only one surround back speaker connected.
Listening to your system

SC-26:

1. Set the remote control to the receiver operation mode.
2. Press ADV SURR (ADVANCED SURROUND) repeatedly to select a listening mode.
   - ACTION – Designed for action movies with dynamic soundtracks
   - DRAMA – Designed for movies with lots of dialog
   - SCI-FI – Designed for science fiction with lots of special effects
   - MONO FILM – Creates surround sound from mono soundtracks
   - ENT.SHOW – Suitable for musical sources
   - EXPANDED – Creates an extra wide stereo field
   - TV SURROUND – Provides surround sound for both mono and stereo TV sources
   - ADVANCED GAME – Suitable for video games
   - SPORTS – Suitable for sports programs
   - CLASSICAL – Gives a large concert hall-type sound
   - ROCK/POP – Creates a live concert sound for rock and/or pop music
   - UNPLUGGED – Suitable for acoustic music sources
   - EXT.STEREO – Gives multichannel sound to a stereo source, using all of your speakers
   - PHONES SURR – When listening through headphones, you can still get the effect of overall surround.

Tip

- When an Advanced Surround listening mode is selected, the effect level can be adjusted using the EFFECT parameter in Setting the Audio options on page 88.

Note

1. Depending on the source and the sound mode you have selected, you may not get sound from the surround back speakers in your setup. For more on this, refer to Using surround back channel processing on page 66.
2. If you press ADV SURR when the headphones are connected, the PHONES SURR mode will automatically be selected.
3. Use with Dolby Pro Logic for a stereo surround effect (stereo field is wider than standard modes with Dolby Digital sources).

Listening in stereo

When you select STEREO, you will hear the source through just the front left and right speakers (and possibly your subwoofer depending on your speaker settings). Dolby Digital, DTS and WMA9 Pro multichannel sources are downmixed to stereo.

SC-27:

1. Set the remote control to the receiver operation mode.
2. While listening to a source, press STEREO for stereo playback.
   - STEREO – The audio is heard with your surround settings and you can still use the Midnight, Loudness, and Tone functions.
   - F.S.SURR FOCUS – See Using Front Stage Surround Advance below for more on this.
   - F.S.SURR WIDE – See Using Front Stage Surround Advance below for more on this.

3. The STEREO mode cannot be selected in the following cases:
   - When MULTI CH IN input is selected.
   - When the HDMI audio output parameter is set to THROUGH in Setting the Audio options on page 88.
Using Front Stage Surround Advance
The Front Stage Surround Advance function allows you to create natural surround sound effects using just the front speakers and the subwoofer.

**SC-27:**

1. Set the remote control to the receiver operation mode.
2. While listening to a source, press STEREO to select Front Stage Surround Advance modes.
   - **STEREO** – See Listening in stereo above for more on this.
   - **F.S.SURR FOCUS** – Use to provide a rich surround sound effect directed to the center of where the front left and right speakers sound projection area converges.

**SC-25:**

- **F.S.SURR WIDE** – Use to provide a surround sound effect to a wider area than **FOCUS** mode.

**FOCUS position**
- (Recommended)

**WIDE position**
- Front left speaker
- Front right speaker
- Front left speaker
- Front right speaker

Using Stream Direct
Use the Stream Direct modes when you want to hear the truest possible reproduction of a source. All unnecessary signal processing is bypassed, and you’re left with the pure analog or digital sound source.

**SC-27:**

1. Set the remote control to the receiver operation mode.
2. While listening to a source, press AUTO/ALC/DIRECT (AUTO SURR/ALC/STREAM DIRECT) to select the mode you want.
3. Check the digital format indicators in the front panel display to see how the source is being processed.

**Note**
1. The Front Stage Surround Advance mode cannot be selected in the following cases:
   - When headphones are plugged in.
   - When **MULTI CH IN** input is selected.
   - When the HDMI audio output parameter is set to **THROUGH** in **Setting the Audio options** on page 88.
2. When using **F.S.SURR WIDE**, a better effect can be obtained if the **Full Auto MCACC** procedure under **Advanced MCACC** is performed. For more on this, refer to **Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control)** on page 46.
3. The Stream Direct mode cannot be selected in the following cases:
   - When headphones are plugged in (except **PURE DIRECT**).
   - When **MULTI CH IN** input is selected.
   - When the **HDMI** audio output parameter is set to **THROUGH** in **Setting the Audio options** on page 88.
Listening to your system

- **AUTO SURROUND** – See Auto playback on page 61.
- **ALC** – Listening in Auto level control mode (page 61).
- **DIRECT** – Sources are heard according to the settings made in the Surround Setup (speaker setting, channel level, speaker distance, acoustic calibration EQ, and X-curve), as well as with dual mono, the input attenuator, and any sound delay and hi-bit/hi-sampling (SC-25 only) settings. You will hear sources according to the number of channels in the signal.
- **PURE DIRECT** – Analog sources are heard without any digital processing.¹ No sound is output from the Speaker B in this mode.
- **OPTIMUM SURR** – Listening in Optimum Surround mode (page 61).

**Using surround back channel processing**

- **Default setting: SBch ON**
  You can have the receiver automatically use 6.1 or 7.1 decoding for 6.1 encoded sources (for example, Dolby Digital EX or DTS-ES), or you can choose to always use 6.1 or 7.1 decoding (for example, with 5.1 encoded material). With 6.1 encoded sources, a surround back channel will be generated, but the material may sound better in the 5.1 format for which it was originally encoded (in which case, you can simply switch surround back channel processing off).
  - With a 7.1-channel surround system, audio signals that have undergone matrix decoding processing through surround back channel processing to which the Up Mix function is added are output from the surround back speakers.

**SC-27:**

1. Set the remote control to the receiver operation mode.
2. Press SBch repeatedly to cycle the surround back channel options.
   Each press cycles through the options as follows:
   - **SBch ON** – Matrix decoding processing for generating the surround back component from the surround component is turned on.
   - **SBch AUTO** – Matrix decoding processing for generating the surround back component from the surround component is switched automatically. Matrix decoding processing is only performed when surround back channel signals are detected in the input signals.
   - **SBch OFF** – Matrix decoding processing for generating the surround back component from the surround component is turned off.

**Using the Virtual Surround Back mode**

- **Default setting: OFF**
  When you're not using surround back speakers, selecting this mode allows you to hear a virtual surround back channel through your surround speakers. You can choose to listen to sources with no surround back channel information, or if the material sounds better in the format (for example, 5.1) for which it was originally encoded, you can have the receiver only apply this effect to 6.1 encoded sources like Dolby Digital EX or DTS-ES.²
  - Press SBch repeatedly to cycle the virtual surround back channel options.
    Each press cycles through the options as follows:
    - **VirtualSB ON** – Virtual Surround Back is always used (for example, on 5.1 encoded material)
    - **VirtualSB AUTO** – Virtual Surround Back is automatically applied to 6.1 encoded sources (for example, Dolby Digital EX or DTS-ES)
    - **VirtualSB OFF** – Virtual Surround Back mode is switched off

² You can't use the Virtual Surround Back mode when the headphones are connected to this receiver or when any of the THX, stereo, Front Stage Surround Advance or Stream Direct mode is selected.
² You can only use the Virtual Surround Back mode if the surround speakers are on and the SB setting is set to NO or if Front Bi-Amp, Speaker B or ZONE 2 is selected at Surr Back System.
² The Virtual Surround Back mode cannot be applied to sources that do not have surround channel information.

¹ There are cases where a brief noise is heard before playback of sources other than PCM. Please select AUTO SURROUND or DIRECT if this is a problem.
Setting the Up Mix function

In a 7.1-channel surround system with surround speakers placed directly at the sides of the listening position, the surround sound of 5.1-channel sources is heard from the side. The Up Mix function mixes the sound of the surround speakers with the surround back speakers so that the surround sound is heard from diagonally to the rear as it should be.¹

- Using the Up Mix function is effective when the speakers in the 7.1-channel surround system are set up as recommended in the example on page 23.
- Depending on the positions of the speakers and the sound source, in some cases it may not be possible to achieve good results. In this case, set the setting to OFF.

1 Switch the receiver into standby.

2 While holding down ENTER on the front panel, press STANDBY/ON.

   The display shows RESET NO.

   Use to select UP MIX ON, and then use to select ON or OFF.

3 Press ENTER to confirm.

   - When set to ON, the UP MIX indicator on the front panel lights.

   **Note**
   1. Set to ON regardless of this setting when playing DTS-HD signals.
   2. May automatically be set to OFF even when set to ON, depending on the input signal and listening mode.
   3. Different presets might also have separate calibration settings for the same listening position, depending on how you're using your system. These presets can be set in Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46 or Automatic MCACC (Expert) on page 110, either of which you should have already completed.

Selecting MCACC presets

- Default setting: MEMORY 1

If you have calibrated your system for different listening positions², you can switch between settings to suit the kind of source you’re listening to and where you’re sitting (for example, watching movies from a sofa, or playing a video game close to the TV).

**SC-27:**

1 Set the remote control to the receiver operation mode.

2 While listening to a source, press MCACC.

   Press repeatedly to select one of the six MCACC presets³.

3 You can also press +/- to select the MCACC preset.

   **Note**
   1. These settings have no effect when headphones are connected.
   2. Different presets might also have separate calibration settings for the same listening position, depending on how you’re using your system.

**SC-25:**

123

456

789

* A.ATT CLR

0 ENTER

---

² Different presets might also have separate calibration settings for the same listening position, depending on how you’re using your system.

³ These settings have no effect when headphones are connected.

You can also press +/- to select the MCACC preset.
Choosing the input signal

On this receiver, it is possible to switch the input signals for the different inputs as described below.1

SC-27:

1 Set the remote control to the receiver operation mode.

2 Press SIGNAL SEL to select the input signal corresponding to the source component. Each press cycles through the options as follows:
   - AUTO – The receiver selects the first available signal in the following order: HDMI; DIGITAL; ANALOG.
   - ANALOG – Selects an analog signal.
   - DIGITAL – Selects an optical or coaxial digital signal.
   - HDMI – Selects an HDMI signal.2
   - PCM – For PCM input signals.3 The receiver selects the first available signal in the following order: HDMI; DIGITAL.

When set to DIGITAL, HDMI or AUTO (only selected DIGITAL or HDMI), the indicators light according to the signal being decoded, as follows:
   - DIGITAL lights with Dolby Digital decoding.
   - DIGITAL PLUS lights with Dolby Digital Plus decoding.
   - TrueHD lights with Dolby TrueHD decoding.
   - DTS lights with DTS decoding.

- DTS HD lights with DTS-HD decoding.
- MSTR lights with DTS-HD Master Audio decoding.
- 96/24 lights with DTS 96/24 decoding.
- WMA9 Pro lights to indicate that a WMA9 Pro signal is being decoded.

1 This receiver can only play back Dolby Digital, PCM (32 kHz to 192 kHz), DTS (including DTS 96/24) and WMA9 Pro digital signal formats. The compatible signals via the HDMI terminals are: Dolby Digital, DTS, WMA9 Pro, PCM (32 kHz to 192 kHz), Dolby TrueHD, Dolby Digital Plus, DTS-EXPRESS, DTS-HD Master Audio, SACD and DVD Audio (including 192 kHz). With other digital signal formats, set to ANALOG (the MULTI CH IN, TUNER and PHONO).
2 You may get digital noise when a LD or CD player compatible with DTS is playing an analog signal. To prevent noise, make the proper digital connections (page 35) and set the signal input to DIGITAL.
3 When PCM is selected, noise may be output during playback of non-PCM sources. Please select another input signal if this is a problem.

Better sound using Phase Control and Full Band Phase Control

This receiver is equipped with the two types of functions that correct phase distortion and group delay: Phase Control and Full Band Phase Control. Activating Full Band Phase Control is strongly recommended because it also involves the effects of Phase Control. For details on each of these two features, refer to the following explanations.

Using Phase Control

During multichannel playback, LFE (Low-Frequency Effects) signals as well as low-frequency signals in each channel are assigned to the subwoofer or the other most appropriate speaker. At least in theory, however, this type of processing involves a group delay that varies with frequency, resulting in phase distortion where the low-frequency sound is delayed or muffled by the conflict with other channels. With the Phase Control mode switched on, this receiver can reproduce powerful bass sound without deteriorating the quality of the original sound (see illustration below).

Phase Control OFF

- Rhythms blurred and difficult to hear
- Bass sound with loss of depth
- Sound of musical instruments with no reality

Note

1 When the HDMI audio output parameter is set to THROUGH, the sound will be heard through your TV, not from this receiver.
2 When PCM is selected, noise may be output during playback of non-PCM sources. Please select another input signal if this is a problem.
3 This is useful if you find there is a slight delay before AUTO recognizes the PCM signal on a CD, for instance.
Listening to your system

Phase Control ON

1. Set the remote control to the receiver operation mode.
2. Press PHASE CTRL (PHASE CONTROL) to select PHASE CONTROL.

The ▶ indicator on the front panel lights.

Using Full Band Phase Control

The Full Band Phase Control feature calibrates the frequency-phase characteristics of the speakers connected.

Standard speakers designed exclusively for audio use generally reproduce sound with the divided frequency bands output from a speaker system consisting of multiple speakers (in case of typical 3-way speakers, for instance, the tweeter, the squawker (midrange), and the woofer output sound in the high-, middle- and low-frequency ranges, respectively). Though these speakers are designed to flatten the frequency-amplitude characteristics across wide ranges, there are cases where the group delay characteristics are not effectively flattened. This phase distortion of the speakers subsequently causes group delay (the delay of low-frequency sound against high-frequency sound) during audio signal playback.

This receiver analyzes the frequency-phase characteristics of the speakers by calibrating test signals output from the speakers with the supplied microphone, therefore flattening the analyzed frequency-phase characteristics during audio signal playback\(^2\) – the same correction is made for a pair of left and right speakers. This correction minimizes group delay between the ranges of a speaker and improves the frequency-phase characteristics across all ranges.

Furthermore, the enhanced frequency-phase characteristics between channels ensure better surround sound integration for multichannel setting.\(^3\)

Note

1. Phase matching is a very important factor in achieving proper sound reproduction. If two waveforms are 'in phase', they crest and trough together, resulting in increased amplitude, clarity and presence of the sound signal. If a crest of a wave meets a trough (as shown in the upper section of the diagram above), then the sound will be 'out of phase' and an unreliable sound image will be produced.

2. The PHASE CONTROL feature is available even when the headphones are plugged in.

3. If your subwoofer has a phase control switch, set it to the plus (+) sign (or 0°). However, the effect you can actually feel when PHASE CONTROL is set to ON on this receiver depends on the type of your subwoofer. Set your subwoofer to maximize the effect. It is also recommended you try changing the orientation or the place of your subwoofer.

4. Set the built-in lowpass filter switch of your subwoofer to off. If this cannot be done on your subwoofer, set the cutoff frequency to a higher value.

5. If the speaker distance is not properly set, you may not have a maximized PHASE CONTROL effect.

6. The PHASE CONTROL mode cannot be set to ON in the following cases:
   - When the PURE DIRECT mode is switched on.
   - When the MULTI CH IN input is selected.
   - When the HDMI audio output parameter is set to THROUGH in Setting the Audio options on page 88.

7. When you perform the Auto MCACC with Auto MCACC menu under Advanced MCACC (see Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46), or set Auto MCACC menu under Auto MCACC under Advanced MCACC to Full Band Phase Ctrl. Select ALL when you perform the Auto MCACC with Auto MCACC menu. Upon calibration of the frequency-phase characteristics of the speakers, the Full Band Phase Ctrl feature is automatically switched on. Note that FULLBAND PHASE cannot be selected unless the frequency-phase characteristics of the speakers are calibrated.

8. The original characteristics of group delay of the speakers calibrated and the targeted characteristics after correction can be displayed graphically in the GUI screen (see Using Full Band Phase Control on page 69). Also, when your PC is connected to this receiver, the original characteristics of group delay of the speakers calibrated and the corrected characteristics of group delay can be displayed in 3-dimension on your PC (see Output PC on page 120).
Listening to your system

Full Band Phase Control OFF

Sound in the middle- and low-frequency ranges is delayed against the high-frequency sound due to group delay.

Full Band Phase Control ON

With the phase distortion corrected, the frequency-phase characteristics are improved across all ranges.

- Sound with live dynamics
- Sound of musical instruments with superb reality
- Sound so accurately reproduced that you can even hear the lip movement of the singer
- Speech heard with no loss of clarity
- Surround sound with excellent integration

Note

1 The Full Band Phase Ctrl mode cannot be set to ON in the following cases:
   - When headphones are plugged in.
   - When the PURE DIRECT mode is switched on.
   - When MULTI CH IN input is selected.
   - When the HDMI audio output parameter is set to THROUGH in Setting the Audio options on page 88.
Chapter 7: Playback with HOME MEDIA GALLERY inputs

Enjoying the Home Media Gallery

This receiver’s Home Media Gallery function allows you to listen to audio files or listen to Internet radio stations on a computer or other component connected to the receiver’s LAN terminal. This chapter describes the connection, setup, and playback procedures required to enjoy these features. It is advisory that you also refer to the operation manual supplied with your network component.

Features of Home Media Gallery

This receiver is equipped with the LAN terminal and you can enjoy the following features by connecting your components to these terminals.

- **Playback the music files stored in PCs**
  You can playback a lot of musics stored in your PCs using this unit.
  → See Playback with Home Media Gallery on page 74 and Playing back audio files stored on components on the network on page 75.

- **Listening to Internet radio stations**
  You can select and listen to your favorite Internet radio station from the list of Internet radio stations created, edited, and managed by the vTuner database service exclusively for use with the Pioneer products.
  → See Playback with Home Media Gallery on page 74 and Listening to Internet radio stations on page 75.

- **Listening to Rhapsody, Sirius, Neural THX internet radio or Neural Music Direct**
  → See Listening to Rhapsody on page 77.
  → See Listening to Sirius Internet Radio on page 77.
  → See Listening to Neural Music Direct on page 77.

Note

1 Besides a PC, you can also play back audio files stored on your other components with the built-in media server function based on DLNA 1.0 framework and protocols (i.e. network-capable hard disks and audio systems).
### Playback with HOME MEDIA GALLERY inputs

#### Connecting to the network through LAN interface

**Caution**
- Before making or changing the connections, switch off the power and disconnect the power cord from the power outlet. Plugging in should be the final step.
- Illustration shows the SC-27, however connections for the SC-25 are the same except where noted.

By connecting this receiver to the network via the LAN terminal, you can play back audio files stored on components on the network, including your PC, and listen to Internet radio stations.

Connect the LAN terminal on this receiver to the LAN terminal on your router (with or without the built-in DHCP server function) with a straight LAN cable (CAT 5 or higher).

Turn on the DHCP server function of your router. In case your router does not have the built-in DHCP server function, it is necessary to set up the network manually. Otherwise, you cannot play back audio files stored on components on the network or listen to Internet radio stations. See Setting up the network on page 79 for more on this.

The specifications of a LAN terminal

<table>
<thead>
<tr>
<th>LAN terminal</th>
<th>Ethernet jack</th>
</tr>
</thead>
<tbody>
<tr>
<td>..................</td>
<td>10BASE-T/100BASE-TX</td>
</tr>
</tbody>
</table>

**Note**
- To listen to Internet radio stations, you must sign a contract with an ISP (Internet Service Provider) beforehand.
- Photo or video files cannot be played back.
- With Windows Media Connect or Windows Media Player 11, you can even play back copyrighted audio files on this receiver.

---

**Introduction**

The Home Media Gallery allows you to play music on media servers connected on an identical Local Area Network (LAN) as the receiver. This unit allows for the playing of files stored on the following:

- PCs running Microsoft Windows XP with Windows Media Connect installed
- PCs running Microsoft Windows Vista or XP with Windows Media Player 11 installed
- DLNA-compatible digital media servers (on PCs or other components)

To play back audio files stored on components on the network or listen to Internet radio stations, you must turn on the DHCP server function of your router. In case your router does not have the built-in DHCP server function, you must turn on the DHCP server function of your router. In case your router does not have the built-in DHCP server function, it is necessary to set up the network manually. Otherwise, you cannot play back audio files stored on components on the network or listen to Internet radio stations. See Setting up the network on page 79 for more on this.
About network playback

The network playback function of this unit uses the following technologies:

Windows Media Player

See Windows Media Player 11/ Windows Media Connect on page 83 for more on this.

Windows Media DRM

Microsoft Windows Media Digital Rights Management (WMDRM) is a platform to protect and securely deliver content for playback on computers, portable devices and network devices. Home Media Gallery functions as a WMDRM 10 for networked devices. WMDRM protected content can only be played on media servers supporting WMDRM.

Content owners use WMDRM technology to protect their intellectual property, including copyrights. This device uses WMDRM software to access WMDRM protected content. If the WMDRM software fails to protect the content, content owners may ask Microsoft to revoke the software's ability to use WMDRM to play or copy protected content. Revocation does not affect unprotected content. When you download licenses for protected content, you agree that Microsoft may include a revocation list with the licenses. Content owners may require you to upgrade WMDRM to access their content. If you decline an upgrade, you will not be able to access content that requires the upgrade.

This product is protected by certain intellectual property rights of Microsoft. Use or distribution of such technology outside of this product is prohibited without a license from Microsoft.

DLNA

DLNA CERTIFIED™ Audio Player

The Digital Living Network Alliance (DLNA) is a cross-industry organization of consumer electronics, computing industry and mobile device companies. Digital Living provides consumers with easy sharing of digital media through a wired or wireless network in the home.

The DLNA certification logo makes it easy to find products that comply with the DLNA Interoperability Guidelines. This unit complies with DLNA Interoperability Guidelines v1.0.

When a PC running DLNA server software or other DLNA compatible device is connected to this player, some setting changes of software or other devices may be required. Please refer to the operating instructions for the software or device for more information.

DLNA and DLNA CERTIFIED are trademarks and/or service marks of Digital Living Network Alliance.

Content playable over a network

- Even when encoded in a compatible format, some files may not play correctly.
- Movie or Photo files cannot be played back.
- There are cases where you cannot listen to an Internet radio station even if the station can be selected from a list of radio stations.
- Some functions may not be supported depending on the server type or version used.
- Supported file formats vary by server. As such, files not supported by your server are not displayed on this unit. For more information check with the manufacturer of your server.

About playback behavior over a network

- Playback may stall when the PC is switched off or any media files stored on it are deleted while playing content.
- If there are problems within the network environment (heavy network traffic, etc.) content may not be displayed or played properly (playback may be interrupted or stalled). For best performance, a 100BASE-TX connection between player and PC is recommended.
- If several clients are playing simultaneously, as the case may be, playback is interrupted or stalled.
- Depending on the security software installed on a connected PC and the setting of such software, network connection may be blocked.

Pioneer is not responsible for any malfunction of the player and/or the Home Media Gallery features due to communication error/malfunctions associated with your network connection and/or your PC, or other connected equipment. Please contact your PC manufacturer or Internet service provider.

“Windows Media™” is a trademark of Microsoft Corporation. This product includes technology owned by Microsoft Corporation and cannot be used or distributed without a license from Microsoft Licensing, Inc.

Microsoft®, Windows® Vista, Windows® XP, Windows® 2000, Windows® Millennium Edition, Windows® 98, and Windows® NT® are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

Authorizing this receiver

In order to be able to play with Home Media Gallery, this receiver must be authorized. This happens automatically when the receiver makes a connection over the network to the PC. If not, please authorize this receiver manually on the PC. The authorization (or permission) method for access varies depending on the type of server currently being connected. For more information on authorizing this receiver, refer to the instruction manual of your server.
Playback with HOME MEDIA GALLERY inputs

**Playback with Home Media Gallery**

**SC-27:**

![Remote Control](image1)

**SC-25:**

![Remote Control](image2)

**Important**
- When you play back audio files, "Connecting..." is displayed before playback starts. The display may continue for several seconds depending on the type of file.
- In case a domain is configured in a Windows network environment, you cannot access a PC on the network while you are logged onto the domain. Instead of logging onto the domain, log onto the local machine.
- There are cases where the time elapsed may not be correctly displayed.

1. **SC-27 only:** Set the remote control operation selector switch to SOURCE.
2. Press HOME MEDIA GALLERY to select Home Media Gallery as the input function.
   It may take several seconds for this receiver to access the network. The following screen appears when the Home Media Gallery is selected as the input function. The number next to the mark indicates the number of connected servers.
   **Main Zone:**
   - Internet Radio
   - Rhapsody
   - Sirius
   - Neural Music Direct
   - Server Name
   - Favorites
   - Recently played
   - Setup
   - Top Menu

**Sub Zone:**
- The server without the mark cannot be accessed.
3. Use arrow keys to select the category you want to play back, and then press ENTER.
   Select a category from the following list:
   - Internet Radio
   - Rhapsody
   - Sirius
   - Neural Music Direct
   - Server Name
   - Favorites
   - Recently played
   - Setup
   - Top Menu

Depending on the selected category, the names of folders, files, and Internet radio stations are displayed.

4. Use arrow keys to select the folder, music files or Internet radio station to play back, and then press ENTER.
   Press arrow keys to scroll up and down the list and select the desired item. When you press ENTER, playback starts with the playback screen being displayed for the selected item. To return to the list screen, press RETURN.
   - In case of a server

**Note**
1. When the list screen is displayed from the playback screen, the playback screen reappears automatically if no operation is performed for 10 seconds while the list screen is displayed.
Playback with HOME MEDIA GALLERY inputs

- In case of Internet radio

Only audio files with the \(\bullet\) mark can be played. In case of the folders with the \(\bullet\) mark, use \(\Delta/\nabla\) and ENTER to select the desired folder and audio files.

5 Repeat step 4 to play back the desired song.
For detailed operating instructions, refer to the section shown below.
- Internet radio stations – See Listening to Internet radio stations below.
- Rhapsody – See Listening to Rhapsody on page 77.
- Sirius – See Listening to Sirius Internet Radio on page 77.
- Neural Music Direct – See Listening to Neural Music Direct on page 77.
- Server – See Playing back audio files stored on components on the network below.

Playing back audio files stored on components on the network

About the playback screen

Listening to Internet radio stations

About Internet radio
Internet radio is an audio broadcasting service transmitted via the Internet. There are a large number of Internet radio stations broadcasting a variety of services from every corner of the world. Some are hosted, managed, and broadcast by private individuals while others are by the corresponding traditional terrestrial radio stations or radio networks. Whereas terrestrial, or OTA (over-the-air), radio stations are geographically restricted on the range of radio waves broadcast from a transmitter through the air, Internet radio stations are accessible from anywhere in the world, as long as there
is a connection to the Internet, as services are not transmitted through the air but are delivered over the World Wide Web. On this receiver you can select Internet radio stations by genre as well as by region.

About the playback screen
The following screen appears when audio streams from an Internet radio station are received.

Main Zone:

Sub Zone:

About list of Internet radio
The list of Internet radio stations on this receiver is created, edited, and managed by the vTuner database service exclusively for use with this receiver. For details about vTuner, see vTuner on page 82.

Saving and retrieving Internet radio stations
You can easily save and retrieve saved Internet radio stations. See Advanced operations for Internet radio on page 79 for more on this.¹

Registering broadcast stations not on the vTuner list from the special Pioneer site
With the receiver, broadcast stations not included on the list of station distributed by vTuner can be registered and played. Check the access code required for registration on the receiver, use this access code to access the special Pioneer Internet radio site and register the desired broadcast stations in your favorites. The address of the special Pioneer Internet radio site is:
http://www.radio-pioneer.com

1. Display the Internet Radio list screen.
To display the Internet Radio list screen, perform steps 1 to 3 at Playback with Home Media Gallery on page 74.

2. Use / to select ‘Help’, then press ENTER.

3. Use / to select ‘Get access code’, then press ENTER.
The access code required for registration on the special Pioneer Internet radio site is displayed. Make a memo of this address.

The following can be checked on the Help screen:

- Get access code – The access code required for registration on the special Pioneer Internet radio site is displayed.

- Show Your WebID/PW – After registering on the special Pioneer Internet radio site, the registered ID and password are displayed.

- Reset Your WebID/PW – Resets all the information registered on the special Pioneer Internet radio site. When reset, all the registered broadcast stations are also cleared. If you want to listen to the same stations, re-register after resetting.

¹ To listen to Internet radio stations, you must have high-speed broadband Internet access. With a 56 K or ISDN modem, you may not enjoy the full benefits of Internet radio.

- The port number varies depending on the Internet radio station. Check the firewall settings.

- A list of Internet radio stations provided by the vTuner database service is subject to change or deletion without notice due to various reasons.

- Broadcasts may be stopped or interrupted depending on the Internet radio station. In this case, you cannot listen to a radio station selected from the list of Internet radio stations.
Playback with HOME MEDIA GALLERY inputs

4    Access the special Pioneer Internet radio site from your computer and perform the registration process. http://www.radio-pioneer.com
    Access the above site and use the access code in step 3 to perform user registration, following the instructions on the screen.

5    Register the desired broadcast stations as your favorites, following the instructions on the computer's screen.
    Both broadcast stations not on the vTuner list and stations on the vTuner list can be registered. In this case they are registered on the receiver as favorite broadcast stations and can be played.

Listening to Rhapsody

About Rhapsody
Rhapsody is a paid digital music broadcast service provided by RealNetworks. Rhapsody offers 30-day free trial. Access the website in order to set up a trial account: http://www.rhapsody.com/pioneer/signup

- You must have a registered account in order to listen to songs using Rhapsody. For details, see Checking about the Accounts on page 81.
- As of April 2009, the Rhapsody service is only offered in the United States.
- Some functions may be changed at Rhapsody's discretion.

Listening to Sirius Internet Radio
Check the website below to listen to Sirius Internet Radio:
http://www.sirius.com/siriusinternetradio

- You must have a registered account in order to listen to songs using Sirius Internet Radio. For details, see Checking about the Accounts on page 81.
- Some functions may be changed at Sirius' discretion.

Listening to Neural Music Direct

About Neural Music Direct
Neural Music Direct is an Internet radio station managed and operated by Neural THX. Neural radio stations deliver multichannel surround sound. The Neural-THX Surround mode is automatically selected and lets you enjoy a rich multichannel surround sound experience. For details about Neural THX, see the operation manual supplied separately.

Playing back your favorite songs

About the Favorites folder
You can register up to 20 of your favorite songs or Internet radio stations in the Favorites folder. Note that only the audio files stored on components on the network can be registered.

Registering and deleting audio files and Internet radio stations in and from the Favorites folder
Press PGM while a song is being played back or stopped. The selected song is then registered in the Favorites folder.
Up to 20 songs or Internet radio stations can be registered.
To delete a registered song, select the Favorites folder, select the song you want to delete from the folder, and press CLR. The selected song is then deleted from the Favorites folder.

Neural Surround is a trademark owned by Neural Audio Corporation, THX is a trademark of THX Ltd., which may be registered in some jurisdictions. All rights reserved.
### About playable file formats

The Home Media Gallery feature of this receiver supports the following file formats. Note that some file formats are not available for playback although they are listed as playable file formats. Also, the compatibility of file formats varies depending on the type of server. Check with your server to ensure the compatibility of file formats supported by your server.

Advanced operations for Internet radio
SC-27:

Saving Internet radio stations
This receiver can remember the Internet radio stations that you often listen to in seven classes (A to G) with up to nine stations in each class to make the total of 63 stations at its maximum capacity.

Before proceeding with the following steps, check whether you have followed Steps 2 to 4 on page 74.

1. SC-27 only: Set the remote control operation selector switch to SOURCE.

2. Tune into the Internet radio station that you want to save.

3. Press T.EDIT to switch to the station-saving mode.

4. Press CLASS to select the class that you want to save the station in.

5. Use †/‡ to select the number that you want to save the station as, and then press ENTER.

You can also select the station number by using the number buttons. Select the desired number from 1 to 9.

Retrieving saved Internet radio stations
You need to save Internet radio stations first before retrieving them. If there are no Internet radio stations currently being saved, see Saving Internet radio stations above and save at least one Internet radio station before proceeding with the following steps.

1. SC-27 only: Set the remote control operation selector switch to SOURCE.

2. Select the class that you want to retrieve an Internet radio station from.

Each time you press CLASS, the class switches to A to G in turn.

3. Use †/‡ to select the station number that you want to retrieve.

You can also select the station number by using the number buttons. ‘Preset Not Stored’ appears when you select an Internet radio station currently not being saved.

Setting up the network
In case the router connected to the LAN terminal on this receiver is a broadband router (with the built-in DHCP server function), simply turn on the DHCP server function, and you will not need to set up the network manually. You must set up the network as described below only when you have connected this receiver to a server without the DHCP server function. Before you set up the network, consult with your ISP or the network manager for the required settings. It is advisory that you also refer to the operation manual supplied with your network component.  

IP Address
The IP address to be entered must be defined within the following ranges. If the IP address defined is beyond the following ranges, you cannot play back audio files stored on components on the network or listen to Internet radio stations.

Class A: 10.0.0.1 to 10.255.255.254
Class B: 172.16.0.1 to 172.31.255.254
Class C: 192.168.0.1 to 192.168.255.254

Subnet Mask
In case an xDSL modem or a terminal adapter is directly connected to this receiver, enter the subnet mask provided by your ISP on paper. In most of the cases, enter 255.255.255.0.

Gateway IP
In case a gateway (router) is connected to this receiver, enter the corresponding IP address.

DNS Server Preferred/DNS Server Alternate
In case there is only one DNS server address provided by your ISP on paper, enter ‘DNS Server Preferred’. In case there are more than two DNS server addresses, enter ‘DNS Server Alternate’ in the other DNS server address field.

Note
1 In case you make changes to the network configuration without the DHCP server function, make the corresponding changes to the network settings of this receiver.
Proxy Hostname/Proxy Port
This setting is required when you connect this receiver to the Internet via a proxy server. Enter the IP address of your proxy server in the ‘Proxy Hostname’ field. Also, enter the port number of your proxy server in the ‘Proxy Port’ field.

Tip
- Press ↑ / ↓ or the numeric buttons to enter alphanumeric characters. To delete alphanumeric characters entered one at a time, press CLEAR or RETURN. ‘Cancel Key Editing Lose Changes?’ appears when you press RETURN or CLEAR while the cursor is placed in the leftmost position on the alphanumeric character entry screen. In this case, press ENTER to cancel the editing screen. RETURN to return to the editing screen.

3 Select ‘SETUP’ and press ENTER to confirm your selection.
The SETUP screen appears.

4 Select ‘Network Setup’ and press ENTER to confirm your selection.
The Network Setup screen appears.

5 Either ‘Network Found’ or ‘No Network Found’ appears. Check the network connection status and press ENTER.
   - Network Found – Connected to a component on the network.
   - No Network Found – Not connected to a component on the network.
The Network IP Settings screen appears.

6 Select ‘Static IP Address’ and press ENTER to confirm your selection.
The IP address screen appears. When you select ‘Automatic (DHCP)’, the network is automatically set up, and you do not need to follow Steps 7 to 8. Proceed with Step 9.

7 Select ‘Change’ and press ENTER to confirm your selection.
The Edit IP address screen appears.

8 Enter the IP address.
Press ↑ / ↓ to select a number and ← / → to move the cursor. After you select the last number, press ENTER or RETURN. You can also use the numeric buttons to enter a number. The Enable Proxy Server screen appears.
Playback with HOME MEDIA GALLERY inputs

9 Select ‘No’ or ‘Yes’ for the proxy server setting to deactivate or activate the proxy server.

10 Select ‘Change’ and press ENTER to confirm your selection.
The Edit Proxy Hostname screen appears.

11 Enter the address of your proxy server or the domain name.
After entry, press ➔ or ENTER. The Proxy Port screen appears.

12 Select ‘Change’ and press ENTER to confirm your selection.
The Edit Proxy Port screen appears.

13 Enter the port number of your proxy server.
Use the numeric buttons to enter the port number. After entry, press ➔ or ENTER. The Settings OK? screen appears.

14 Press ENTER to complete the network setup procedure.
The Top Menu screen appears.

15 Switch off the receiver.
Use 🎪 RECEIVER to switch off.

Checking the network settings
You can check the following network settings of this receiver: the MAC address, the IP address, the gateway IP address, the proxy server, the Subnet mask, and the firmware version (for the Home Media Gallery of this receiver).

Before proceeding with the following steps, check whether you have followed Steps from 1 to 3 on page 80.

1 Select ‘Information’ and press ENTER to confirm your selection.
The Firmware Version (for the Home Media Gallery of this receiver) screen appears.

(The version of the illustration is not the latest.)

2 Check the network settings.
Press ↑/↓ to switch the display. Each time you press ↑/↓, the display switches as follows.
Firmware Version ↔ MAC Address ↔ IP address ↔ Gateway IP ↔ Proxy Server ↔ Subnet Mask

3 Press RETURN.
The Setup screen appears. To return to the Top Menu screen, press RETURN again.

Checking about the Accounts
Screen concerning Rhapsody or Sirius Internet Radio account registration.

Before proceeding with the following steps, check whether you have followed Steps from 1 to 3 on page 80.

1 Select Accounts and press ENTER to confirm your selection.

2 Select Rhapsody or Sirius and press ENTER.¹
The contents below can be checked when Rhapsody is selected.
• Sign in to Rhapsody (Set Account)
• Account Info
The contents below can be checked when Sirius is selected.
• Set Account
When disposing of the product, we recommend you reset it to delete the data. See Resetting the system on page 95.

¹ Some operating procedures, etc., may be changed at the discretion of Rhapsody and Sirius.
Software update
Information on software updates may be posted on the Pioneer website.
http://www.pioneerelectronics.com

Glossary

**aacPlus**
AAC decoder uses aacPlus developed by Coding Technologies. (www.codingtechnologies.com)

**Default Gateway**
Default Gateway is a node on a computer network that serves as an access point to another network. A default gateway (such as a computer and router) is used to forward all traffic that is not addressed to a station within the local subnet.

**DHCP (Dynamic Host Configuration Protocol) Server**
A DHCP server is a server that allocates IP addresses to hosts (network devices). In most cases, a broadband router serves as a DHCP server in a home network.

**DLNA**
The DLNA authorized logo makes it easy for consumers to recognize products that meet the new standard for home network PCs and other digital devices, as set down in the DLNA Guidelines for interoperability. This allows music, video, etc. to be enjoyed from various devices over a home network. This unit is compatible with music, photo and video content, and is based on the DLNA Home Networked Device Interoperability Guidelines v1.0. This unit can be used to playback music, photos and video stored on a DLNA-compatible server connected through a LAN cable.

Digital Living Network Alliance (DLNA) is dedicated to the simplified sharing of digital content, such as digital music, photos and video among networked consumer electronics (CE) and PCs. By establishing a platform of interoperability based on open industry standards, DLNA delivers technical design guidelines that companies can use to develop digital home products that share content through wired or wireless networks in the home.

**DNS**
DNS is an abbreviation for the Domain Name System, which stores and associates many types of information with domain names. Most importantly, DNS translates domain names (computer hostnames or sitenames, such as www.pioneerelectronics.com) to IP addresses (such as 202.221.192.106).

**Ethernet**
A frame-based computer networking technology for local area networks (LANs). This player supports 100BASE-TX and 10BASE-T.

**FLAC**
FLAC (Free Lossless Audio Codec) is an audio format allows lossless codec. Audio is compressed in FLAC without any loss in quality. For more details about FLAC, visit the following website: http://flac.sourceforge.net/

**IP (Internet Protocol) address**
A unique number that devices use in order to identify and communicate with each other on a network utilizing the Internet Protocol standard, such as '192.168.0.1'. No duplicate numbers are allowed in the network.

**LAN**
LAN is an abbreviation for the Local Area Network, which is a computer network covering a small geographical area, like a home, office, or group of buildings. Current LANs are most likely to be based on switched IEEE 802.3 Ethernet technology, running at 10, 100, or 1000 Mbit/s, or on IEEE 802.11 Wi-Fi technology.

**MAC (Media Access Control) address**
An address attached to the port of any network device with an IP address. The MAC address is expressed as “00:e0:36:xx:xx:xx” and cannot be changed.

**Neural Surround**
Neural Surround represents the latest advancement in surround technology and has been adopted by XM Satellite Radio, FM Radio and Neural Music Direct for broadcasts of surround recordings and live events.
Playback with HOME MEDIA GALLERY inputs

Neural Surround employs psychoacoustic frequency domain processing which allows delivery of a more detailed sound stage with superior localization of surround elements. System playback is scalable from stereo up to state-of-the-art multichannel surround.

**Subnet mask**
The IP address is divided into the network address part and the host address part. The subnet mask is expressed as ‘255.255.255.0’. In most cases, the subnet mask is automatically assigned by the DHCP server.

**vTuner**
vTuner is a paid online database service that allows you to listen to radio and TV broadcasts on the Internet. vTuner lists thousands of stations from over 100 different countries around the globe. For more detail about vTuner, visit the following website:
http://www.radio-pioneer.com

“This product is protected by certain intellectual property rights of NEMS and BridgeCo. Use or distribution of such technology outside of this product is prohibited without a license from NEMS and BridgeCo or an authorized subsidiary.”

**Windows Media**
Windows Media is a multimedia framework for media creation and distribution for Microsoft Windows. Windows Media is either a registered trademark or trademark of Microsoft Corporation in the U.S. and/or other countries. Use an application licensed by Microsoft Corporation to author, distribute, or play Windows Media formatted content. Using an application unauthorized by Microsoft Corporation is subject to malfunction.

**Windows Media DRM**
Windows Media DRM is a DRM (Digital Rights Management) service for the Windows Media platform. It is designed to provide secure delivery of audio and/or video content over an IP network to a PC or other playback device in such a way that the distributor can control how that content is used. The WMDRM-protected content can only be played back on a component supporting the WMDRM service.

**Windows Media Player 11/Windows Media Connect**
Windows Media Connect is software to deliver music, photos and movies from a Microsoft Windows XP computer to home stereo systems and TVs. With this software, you can play back files stored on the PC through various devices wherever you like in your home.

At this time you cannot download the Windows Media Connect software from Microsoft’s website. If your server currently does not have Windows Media Connect installed, install Windows Media Player 11 (for Windows XP) instead. This software can be downloaded from Microsoft’s website.

For more information check the official Microsoft website.
Chapter 8: KURO LINK

Important

- The procedure for setting the receiver operation mode differs for the remote controls included with the SC-27 and SC-25. For the SC-27's remote control, set the remote control operation selector switch to RECEIVER. For the SC-25's remote control, press the RECEIVER button. When “set the remote control to the receiver operation mode” is indicated in these instructions, use the respective procedure described above.

Synchronized operation with a KURO LINK-compatible Pioneer flat panel TV or Blu-ray disc player or with a component of another make that supports the KURO LINK function is possible when the component is connected to the receiver using an HDMI cable. For details about concrete operations, settings, etc., refer to the operating instructions for each component.

You cannot use this function with components that do not support KURO LINK.

We do not guarantee this receiver will work with Pioneer KURO LINK-compatible components or components of other makes that support the KURO LINK function. We do not guarantee that all synchronized operations will work with components of other makes that support the KURO LINK function.

- Use a High Speed HDMI™ cable when you want to use the KURO LINK function. The KURO LINK function may not work properly if a different type of HDMI cable is used.

Making the KURO LINK connections

You can use synchronized operation for a connected flat panel TV and up to four other components. Be sure to connect the flat panel TV’s audio cable to the audio input of this unit.

For details, see Connecting your TV and playback components on page 29.

Important

- When connecting this system or changing connections, be sure to switch the power off and disconnect the power cord from the wall socket. After completing all connections, connect the power cords to the wall socket.

- After this receiver is connected to an AC outlet, a 2 second to 10 second HDMI initialization process begins. You cannot carry out any operations during initialization. The HDMI indicator on the display unit blinks during initialization, and you can turn this receiver on once it has stopped blinking.

- To get the most out of this function, we recommend that you connect your HDMI component not to a flat panel TV but rather directly to the HDMI terminal on this receiver.

- To use the KURO LINK function, connect this receiver and flat panel TV using the HDMI OUT 1 terminal. Connecting the KURO LINK compatible component using the HDMI OUT 2 terminal may result in malfunction. If this happens, turn off the KURO LINK compatible component’s KURO LINK setting.

- While the receiver is equipped with four HDMI inputs, the KURO LINK function can only be used with up to three DVD or Blu-ray disc players or up to three DVD or Blu-ray disc recorders.

Cautions on the KURO LINK function

- Connect the TV directly to this receiver. Interrupting a direct connection with other amps or an AV converter (such as an HDMI switch) can cause operational errors.

- Only connect components (Blu-ray disc player, etc.) you intend to use as a source to the HDMI input of this receiver. Interrupting a direct connection with other amps or an AV converter (such as an HDMI switch) can cause operational errors.

- When KURO LINK is set to ON, HDMI Input is automatically set to OFF.
If a listening mode other than AUTO SURROUND, ALC DIRECT, PURE DIRECT, OPTIMUM SURROUND or STEREO is selected while the PQLS effect is enabled, the PQLS effect is disabled.

When this receiver is connected by HDMI cable to a Pioneer player that is compatible with the PQLS function via HDMI connection and HDMI reauthentication is performed (the HDMI indicator blinks), the PQLS effect is enabled and the listening mode is set to AUTO SURROUND if a listening mode other than AUTO SURROUND, ALC DIRECT, PURE DIRECT, OPTIMUM SURROUND or STEREO is selected.

When the receiver’s KURO LINK is turned ON, even if the receiver’s power is in the standby mode, it is possible to output the audio and video signals from a player via HDMI to the TV without producing sound from the receiver, but only when a KURO LINK-compatible component (Blu-ray disc player, etc.) and compatible TV are connected. In this case, the receiver’s power turns on and the power and HDMI indicators light.

About connections with a product of a different brand that supports the KURO LINK function

The synchronized operations below can be used when the receiver’s KURO LINK function is connected to a TV of a brand other than Pioneer that supports the KURO LINK function. (Depending on the TV, however, some of the KURO LINK functions may not work.)

- You can set whether to output the sound over the speakers connected to the receiver or over the TV’s speakers using the TV’s menu screen.
- You can adjust the receiver’s volume or mute the sound using the TV’s remote control.
- When the TV’s power is set to standby, the receiver’s power is also set to standby. (Only when the input for a component connected to the receiver by HDMI connection is selected or when watching the TV)
- The sound of TV programs or an external input connected to the TV can also be output from the speakers connected to the receiver. (This requires connection of an optical digital cable, etc., in addition to the HDMI cable.)

The synchronized operations below can be used when the receiver’s KURO LINK function is connected to a player or recorder of a brand other than Pioneer that supports the KURO LINK function.

- When playback starts on the player or recorder, the receiver’s input switches to the HDMI input to which that component is connected.

See the Pioneer website for the latest information on the models of non-Pioneer brands and products that support the KURO LINK function.

KURO LINK Setup

You must adjust the settings of this receiver as well as KURO LINK-compatible connected components in order to make use of the KURO LINK function. For more information see the operating instructions for each component.

1 Set the remote control to the receiver operation mode, then press Home Menu.

2 Select ‘System Setup’, then press ENTER.

3 Select ‘Other Setup’, then press ENTER.

4 Select the ‘KURO LINK’ setting you want. Choose whether to set this unit’s KURO LINK function ON or OFF. You will need to set it to ON to use the KURO LINK function.

- ON – Enables the KURO LINK function.
- OFF – The KURO LINK is disabled. Synchronized operations cannot be used.

5 Select the ‘Display Power Off’ setting you want. If the TV’s power is turned off while using the KURO LINK function, the receiver’s power is also turned off (all power off function). This function can be disabled.
YES – The all power off function is enabled. The receiver’s power turns off together with the TV’s power. This function only works when the input for a component connected to the receiver by HDMI connection is selected or when watching the TV.

NO – The all power off function is disabled. The receiver’s power is not affected when the TV’s power is turned off.

6 When you’re finished, press HOME MENU.
You will finish to HOME MENU.

Setting the PQLS function
PQLS (Precision Quartz Lock System) is a digital audio signal transfer control technology using the KURO LINK function. It offers higher-quality audio playback by controlling audio signals from the receiver to a PQLS compatible player, etc. This enables removing jitter that has a negative effect on the quality of the sound and is generated upon transmission.

• On players compatible with PQLS Multi Surround, PQLS works for all sources. Set the player’s audio output to Linear PCM.
• On players compatible with PQLS 2 ch Audio, PQLS only works when playing CDs.

Please refer to the operating instructions supplied with your player for more information.
This function is activated when KURO LINK is set to ON.

SC-27:

PQLS AUTO – PQLS is enabled. A precision quartz controller in this receiver eliminates distortion caused by timing errors (jitter), giving you the best possible digital-to-analog conversion when you use the HDMI interface. This is valid as an HDMI function for PQLS-compatible players.

PQLS OFF – PQLS is disabled.

SC-26:

1 Set the remote control to the receiver operation mode, then press PQLS to select PQLS setting.
The setting is displayed on the front panel display.
Before using synchronization
Once you have finished all connections and settings, you must:
1. Put all components into standby mode.
2. Turn the power on for all components, with the power for the flat panel TV being turned on last.
3. Choose the HDMI input to which the TV is connected to this receiver, and see if video output from connected components displays properly on the screen or not.
4. Check whether the components connected to all HDMI inputs are properly displayed.

Synchronized amp mode
The synchronized amp mode can be set from the KURO LINK-compatible TV’s remote control. See the explanation below for operations in the synchronized amp mode.

These functions are set from the TV’s menu screen. For more information, refer to the operating instructions of the KURO LINK-compatible TV.

Synchronized amp mode operations
When using the synchronized amp mode, the KURO LINK-compatible component connected to the receiver operates in sync as described below.

- The receiver’s volume can be set and the sound can be muted using the TV’s remote control.
- When the TV’s power is set to standby, the receiver’s power is also set to standby. (Only when the input for a component connected to the receiver by HDMI connection is selected or when watching the TV)
- The receiver’s input switches automatically when the KURO LINK-compatible component is played.
- The receiver’s input switches automatically when the TV’s channel is switched.
- The synchronized amp mode remains in effect even if the receiver’s input is switched to a component other than one connected by HDMI.

The operations below can also be used on Pioneer KURO LINK-compatible flat panel TVs.

- When the receiver’s volume is adjusted or the sound is muted, the volume status is displayed on the flat panel TV’s screen.
- When the OSD language is switched on the flat panel TV, the receiver’s language setting also switches accordingly.

Canceling synchronized amp mode
- When the synchronized amp mode is canceled, the receiver’s power turns off if you were viewing an HDMI input or a TV program on the TV.
- When in the synchronized amp mode, the synchronized amp mode is canceled when the receiver’s power is turned off. To turn the synchronized amp mode back on, select the synchronized amp mode using the TV’s remote control.
- When in the synchronized amp mode, the synchronized amp mode is canceled if an operation that produces sound from the TV is performed from the TV’s menu screen, if the receiver’s HDMI output setting is changed, etc.
Chapter 9: Using other functions

Important

• The procedure for setting the receiver operation mode differs for the remote controls included with the SC-27 and SC-25. For the SC-27’s remote control, set the remote control operation selector switch to RECEIVER. For the SC-25’s remote control, press the RECEIVER button. When “set the remote control to the receiver operation mode” is indicated in these instructions, use the respective procedure described above.

Setting the Audio options

There are a number of additional sound settings you can make using the AUDIO PARAMETER menu. The defaults, if not stated, are listed in bold.

Important

• Note that if a setting doesn’t appear in the AUDIO PARAMETER menu, it is unavailable due to the current source, settings and status of the receiver.

1 Set the remote control to the receiver operation mode, then press AUDIO PARAMETER.

2 Use †/‡ to select the setting you want to adjust. Depending on the current status/mode of the receiver, certain options may not be able to be selected. Check the table below for notes on this.

3 Use ueue to set it as necessary. See the table below for the options available for each setting.

4 Press RETURN to confirm and exit the menu.

**About the SRC (Sampling Rate Converter)**

**SC-27 only**

The SC-27 is designed for jitterless high sound quality thanks to the combination of the SRC and a high precision clock system.

The SRC function expands the dynamic range and frequency bandwidth for digital audio signals. (PCM 15-bit or compressed 20-bit audio signals are converted to 24 bits, increasing the sampling frequency for data processing to achieve smoother, more delicate musical expression.)

There is no setting to turn the SRC function on or off; the SRC function is activated in all modes other than Pure Direct with an analog input and Multi channel analog input.

[^3]: Only when listening to 2-channel sources in Dolby Pro Logic II Music/Cinema mode.
[^4]: Only when listening to 2-channel sources in Neo:6 MUSIC/CINEMA mode.
[^5]: Only when listening to 2-channel sources in Neo:6 MUSIC/CINEMA mode.
[^6]: Only when listening to 2-channel sources in Dolby Pro Logic II Music/Cinema mode.
Using other functions

Setting the Video options
There are a number of additional picture settings you can make using the VIDEO PARAMETER menu. The defaults, if not stated, are listed in bold.

**Important**
- Note that if an option cannot be selected on the VIDEO PARAMETER menu, it is unavailable due to the current source, setting and status of the receiver.
- These functions do not affect inputs other than DVD, TV/SAT, DVR, VIDEO1, and VIDEO2.

1. Set the remote control to the receiver operation mode, then press VIDEO PARAMETER.

2. Use to select the setting you want to adjust. Depending on the current status/mode of the receiver, certain options may not be able to be selected. Check the table below for notes on this.

3. Use to set as necessary. See the table below for the options available for each setting.

4. Press RETURN to confirm and exit the menu.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What it does</th>
<th>Option(s)</th>

</thead>
<tbody>
<tr>
<td>V.CONV</td>
<td>Converts video signals for output from the MONITOR OUT jacks (including HDMI OUT connector) for all video types (see page 28).</td>
<td>ON, OFF</td>
</tr>
<tr>
<td>RES</td>
<td>Specifies the output resolution of the video signal (when analog video input signals are output at the HDMI OUT connector, select this according to the resolution of your monitor and the images you wish to watch).</td>
<td>AUTO, PURE, 480p/576p, 720p, 1080i, 1080p</td>
</tr>
<tr>
<td>ASP</td>
<td>Specifies the aspect ratio when analog video input signals are output at the HDMI output. Make your desired settings while checking each setting on your display (if the image doesn’t match your monitor type, cropping or black bands appear).</td>
<td>THROUGH, NORMAL</td>
</tr>
<tr>
<td>PCINEMA</td>
<td>This setting optimizes the picture for film material when the video output is set to progressive. Usually set to AUTO, but try switching to OFF if the picture appears unnatural. Additionally, certain PAL movie video (576i, 25 frames/second STB video output or DVD disc playback, etc.) that contain film progressive material cannot be recognized as such by this receiver.</td>
<td>AUTO, PAL, OFF</td>
</tr>
<tr>
<td>P.MOTION</td>
<td>Adjusts the motion and still picture quality when video output is set to progressive.</td>
<td>–4 to +4, Default: 0</td>
</tr>
<tr>
<td>YNR</td>
<td>Adjusts the amount of noise reduction (NR) applied to the Y (brightness) component.</td>
<td>0 to +8, Default: 0</td>
</tr>
<tr>
<td>DETAIL</td>
<td>Adjusts how sharp edges appear.</td>
<td>–4 to +4, Default: 0</td>
</tr>
<tr>
<td>SHARP</td>
<td>Adjusts the sharpness of the high-frequency (detailed) elements in the picture.</td>
<td>–4 to +4, Default: 0</td>
</tr>
<tr>
<td>BRIGHT</td>
<td>Adjusts the overall brightness.</td>
<td>–6 to +6, Default: 0</td>
</tr>
<tr>
<td>CONTRAST</td>
<td>Adjusts the contrast between light and dark.</td>
<td>–6 to +6, Default: 0</td>
</tr>
<tr>
<td>HUE</td>
<td>Adjusts the red/green balance.</td>
<td>–6 to +6, Default: 0</td>
</tr>
<tr>
<td>CHROMA</td>
<td>Adjusts saturation from dull to bright.</td>
<td>–6 to +6, Default: 0</td>
</tr>
</tbody>
</table>

a. When set to a resolution with which the TV (monitor) is not compatible, no picture is output. Also, in some cases no picture will be output due to copyright protection signals. In this case, change the setting.
- When AUTO is selected, the resolution is selected automatically according to the capacity of the TV (monitor) connected by HDMI. When PURE is selected, the signals are output with the same resolution as when input (At this time, video signals are only output from the same type of terminals to which they were input).
- When a display is connected by HDMI, if this is set to something other than PURE and 480i/576i analog signals are input, 480p/576p signals are output from the component output terminals.
- Conversion to 1080p is only performed for 480i, 576i, 480p and 576p input signals.

b. If the image doesn’t match your monitor type, adjust the aspect ratio on the source component or on the monitor.
- This cannot be set when the resolution is set to PURE.
- NORMAL setting is only displayed when 480i/p or 576i/p video signals are being input.
c. This setting is only displayed when 480i or 576i video signals are being input.
d. This setting is only valid for component outputs.
e. This setting is not valid for HDMI outputs.
f. This setting is not displayed for component inputs.

**Note**
- All of the setting items can be set for each input function.
- Setting items other than V.CONV can only be selected when V.CONV is set to ON.
Using other functions

Switching the speaker system

If you selected **Speaker B** in **Surround back speaker setting** on page 124, three speaker system settings are possible using **SPEAKERS**. If you selected **Normal**, **Front Bi-Amp** or **ZONE 2**, the button will simply switch your main speaker system on or off. The options below are for the **Speaker B** setting only.¹

- **Use SPEAKERS on the front panel to select a speaker system setting.**
  
  As mentioned above, if you have selected **Normal**, the button will simply switch your main speaker system (A) on or off.

Press repeatedly to choose a speaker system option:

- **SP>A** – Sound is output from speaker system A and the same signal is output from the pre-out terminals.
- **SP>B** – Sound is output from the two speakers connected to speaker system B. Multichannel sources will not be heard. The same signal is output from the surround back channel pre-out terminals.
- **SP>AB** – Sound is output from speaker system A (up to 5 channels, depending on the source), the two speakers in speaker system B, and the subwoofer. The sound from speaker system B will be the same as the sound from speaker system A (multichannel sources will be downmixed to 2 channels).
- **SP>(off)** – No sound is output from the speakers. The same sound is output from the pre-out terminals (including from your subwoofer, if connected) as when selecting speaker system A (above).

**Using the MULTI-ZONE controls**

The following steps use the front panel controls to adjust the sub zone volume and select sources. See **MULTI-ZONE remote controls** on page 92.

1. **Press MULTI-ZONE ON/OFF on the front panel.**
   
   Each press selects a MULTI-ZONE option:
   
   - **ZONE 2 ON** – Selects your primary (ZONE 2) sub zone
   - **ZONE 2&3 ON** – Select both sub zones
   - **ZONE 3 ON** – Selects your secondary (ZONE 3) sub zone
   - **MULTI ZONE OFF** – Switches the MULTI-ZONE feature off

   The MULTI-ZONE indicator lights when the MULTI-ZONE control has been switched ON.

2. **Press MULTI-ZONE CONTROL on the front panel to select the sub zone(s) you want.**
   
   If you selected **ZONE 2&3 ON** above, you can toggle between **ZONE 2** and **ZONE 3**.
   
   - When the receiver is on,² make sure that any operations for the sub zone are done while **ZONE** and your selected sub zone(s) show in the display. If this is not showing, the front panel controls affect the main zone only.
   
3. **Use the INPUT SELECTOR dial to select the source for the zone you have selected.**
   
   For example, **ZONE 2 CD-R** sends the source connected to the **CD-R** inputs to the primary (ZONE 2) sub room.
   
   - If you select **TUNER**, you can use the tuner controls to select a preset station (see **Saving station presets** on page 56 if you’re unsure how to do this).³

¹ The subwoofer output depends on the settings you made in **Manual speaker setup** on page 124. However, if **SP>B** is selected above, no sound is heard from the subwoofer (the LFE channel is not downmixed).

² Depending on the settings in **Surround back speaker setting** on page 124 output from the surround back pre-out terminals may change.

³ All speaker systems (except **Speaker B** connections) are switched off when headphones are connected.

² If the receiver is in standby, the display is dimmed, and **ZONE** and your selected sub zone(s) continue to show in the display.

³ The tuner cannot be tuned to more than one station at a time. Therefore, changing the station in one zone also changes the station in the other zone. Please be careful not to change stations when recording a radio broadcast.
When using ZONE 2 and ZONE 3, it is not possible to use the multi-zone function to play different inputs from among Home Media Gallery, iPod/USB, XM and SIRIUS Radio. (It is possible to play when using the main zone and ZONE 2 or the main zone and ZONE 3.)

4 Use the MASTER VOLUME dial to adjust the volume for the zone you have selected. This is only possible if you selected the Variable volume control in ZONE Audio Setup on page 129.1

5 When you’re finished, press MULTI-ZONE CONTROL again to return to the main zone controls. You can also press MULTI-ZONE ON/OFF on the front panel to switch off all output to the sub zone(s).2

MULTI-ZONE remote controls
Set the MULTI-ZONE operation switch to ZONE 2 or ZONE 3 to operate the corresponding zone.

The following table shows the possible MULTI-ZONE remote controls:

<table>
<thead>
<tr>
<th>Button</th>

</tr>
<tr>
<td>VOL +/- (SC-27)</td>
<td>Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).</td>
</tr>
</tbody>
</table>

Making an audio or a video recording
You can make an audio or a video recording from the built-in tuner, or from an audio or video source connected to the receiver (such as a CD player or TV).3

Keep in mind you can’t make a digital recording from an analog source or vice-versa, so make sure the components you are recording to/from are hooked up in the same way (see Connecting your equipment on page 20 for more on connections).

Since the video converter is not available when making recordings (from the video OUT jacks) make sure to use the same type of video cable for connecting your recorder as you used to connect your video source (the one you want to record) to this receiver. For example, you must connect your recorder using Component video if your source has also been connected using Component video. For more information about video connections, see Connecting an HDD/DVD recorder, VCR and other video sources on page 33.

1 The volume levels of the main and sub zones are independent.
2 You won’t be able to switch the main zone off completely unless you’ve switched off the MULTI-ZONE control first.
3 If you don’t plan to use the MULTI-ZONE feature for a while, turn off the power in both the sub and main rooms so that this receiver is in standby.

Some digital sources are copy-protected, and can only be recorded in analog.
Some video sources are copy-protected. These cannot be recorded.

1 Select the source you want to record. Use the input function buttons (or INPUT SELECT).
   • If necessary, set the remote control to the receiver operation mode, then press SIGNAL SEL to select the input signal corresponding to the source component (see Choosing the input signal on page 68 for more on this).
Using other functions

2  Prepare the source you want to record.
   Tune to the radio station, load the CD, video, DVD etc.

3  Prepare the recorder.
   Insert a blank tape, MD, video etc. into the recording device and set the recording levels.
   Refer to the instructions that came with the recorder if you are unsure how to do this. Most video recorders set the audio recording level automatically—check the component’s instruction manual if you’re unsure.

4  Start recording, then start playback of the source component.

Reducing the level of an analog signal
The input attenuator lowers the input level of an analog signal when it’s too strong. You can use this if you find that the OVER indicator lights often or you can hear distortion in the sound.  

SC-27:  
   • Set the remote control to the receiver operation mode, then press A.ATT to switch the input attenuator on or off.

Using the sleep timer
The sleep timer switches the receiver into standby after a specified amount of time so you can fall asleep without worrying about the receiver being left on all night. Use the remote control to set the sleep timer.

SC-27:  
   • Set the remote control to the receiver operation mode, then press SLEEP repeatedly to set the sleep time.

SC-25:  
   • You can check the remaining sleep time at any time by pressing SLEEP once. Pressing repeatedly will cycle through the sleep options again.

Dimming the display
You can choose between four brightness levels for the front panel display. Note that when selecting sources, the display automatically brightens for a few seconds.

SC-27:  

Note
1  The attenuator isn’t available with digital sources, or when using the Stream Direct (ANALOG DIRECT) modes.
2  • You can also switch off the sleep timer simply by switching off the receiver.
   • The sleep timer is valid for all zones. If any zone is on, the sleep timer continues functioning.
Using other functions

SC-25:

- Set the remote control to the receiver operation mode, then press DIMMER repeatedly to change the brightness of the front panel display.

Switching the HDMI output

Set which terminal to use when outputting video and audio signals from the HDMI output terminals (HDMI OUT ALL, HDMI OUT 1 or HDMI OUT 2).
The HDMI OUT1 terminal is compatible with the KURO LINK function.

SC-27:

1 Set the remote control to the receiver operation mode, then press STATUS to check the system settings. These appear on the front panel display.
The front panel display shows each of the following settings for three seconds each:

   - Input Source
   - Sampling Frequency
   - Surround Back channel Processing

SC-25:

- Set the remote control to the receiver operation mode, then press HDMI OUT.
Please wait a while when Please wait ... is displayed.
The output switches among HDMI OUT ALL, HDMI OUT 1 and HDMI OUT 2 each time the button is pressed.¹

Checking your system settings

Use the status display screen to check your current settings for features such as surround back channel processing and your current MCACC preset.

SC-27:

1 If the Pure Direct mode is switched on, some settings above will show OFF, even though they are on.

Note

1 Synchronized amp mode on page 87 is canceled when the HDMI output is switched. If you wish to use the synchronized amp mode, switch to HDMI OUT 1, then select the synchronized amp mode on the flat panel TV using the flat panel TV’s remote control.
2 When the power is turned off then back on after switching the HDMI output, the input is set to a setting between HDMI1 and HDMI4, or BD.
2 If the Pure Direct mode is switched on, some settings above will show OFF, even though they are on.
## Using other functions

### Resetting the system

Use this procedure to reset all the receiver’s settings to the factory default. Use the front panel controls to do this. Set **MULTI-ZONE** to **OFF**.

- Disconnect the iPod and USB memory device from the receiver beforehand.

1. **Switch the receiver into standby.**
2. **While holding down ENTER on the front panel, press STANDBY/ON.**
   The display shows **RESET NO**.
3. **Select ‘RESET’ using , then press ENTER on the front panel.**
   The display shows **RESET? OK**.
4. **Press ENTER to confirm.**
   OK appears in the display to indicate that the receiver has been reset to the factory default settings.

   - Note that all settings will be saved, even if the receiver is unplugged.

Chapter 10: Controlling the rest of your system (In case of SC-27)

Important
• This section includes explanations for the SC-27’s remote control. For instructions for the SC-25’s remote control, see Controlling the rest of your system (In case of SC-25) on page 103.

Operating multiple receivers
The remote control included with this receiver can be used to operate up to three other receivers (of the same model as this receiver) in addition to this receiver. The receiver to be operated is switched by inputting the preset code to set the remote control setting.

• Set the remote modes on the receivers before using this function (see Remote Control Mode Setup on page 130).

1 Check that the remote control’s MULTI-ZONE selector switch is set to MAIN and that the operation selector switch is set to RECEIVER.
2 While pressing MULTI OPERATION, press HOME MENU.
The remote LCD display shows SETUP.
3 Useît/î to select RC MODE, then press ENTER.
4 Useít/î to select the remote mode. 
   RC MODE 1 to 4 can be selected.
5 Press ENTER to set the remote mode.
The selected mode flashes for 3 seconds.
To operate another receiver, start over from step 1 to input its preset code.

Setting the remote to control other components
Most components can be assigned to one of the input function buttons (such as DVD or CD) using the component’s manufacturer preset code stored in the remote.

However, there are cases where only certain functions may be controllable after assigning the proper preset code, or the codes for the manufacturer in the remote control will not work for the model that you are using.

If you can’t find a preset code that matches the component you want to control, you can still teach the remote individual commands from another remote control (see Programming signals from other remote controls on page 97).

Note
• You can cancel or exit any of the steps by pressing MULTI OPERATION. To go back a step, press RETURN.
• After one minute of inactivity, the remote automatically exits the operation.

Selecting preset codes directly

1 While pressing MULTI OPERATION, press HOME MENU. 
The remote LCD display shows SETUP.
2 Use ît/î to select PRESET, then press ENTER. 
3 Press the input function button for the component you want to control, then press ENTER.
When assigning preset codes to TV CONTROL, set the remote control operation selector switch to TV here.
The LCD on the remote displays the component you want to control (for example DVD or TV).1
4 Use ît/î to select the first letter of the brand name of your component, then press ENTER.
This should be the manufacturer’s name (for example, P for Pioneer).
5 Use ît/î to select the manufacturer’s name from the list, then press ENTER.

Note
1 You can’t assign TUNER, HOME MEDIA GALLERY, iPod USB, XM or SIRIUS.
6 Use ‡/¶ to select the proper code from the list, then try using this remote with your component. The code should start with the component type (for example, DVD 020). If there is more than one, start with the first one.1

To try out the remote control, switch the component on or off (into standby) by pressing SOURCE. If it doesn’t seem to work, select the next code from the list (if there is one).

- If you can’t find or properly enter a preset code, you can still teach the remote individual commands from another remote control (see Controls the components below).

7 If your component is controlled successfully, press ENTER to confirm.

The remote LCD display shows OK.

Programming signals from other remote controls

If the preset code for your component is not available, or the available preset codes do not operate correctly, you can program signals from the remote control of another component. This can also be used to program additional operations (buttons not covered in the presets) after assigning a preset code.2

1 While pressing MULTI OPERATION, press HOME MENU.

The remote LCD display shows SETUP.

2 Use ‡/¶ to select LEARNING, then press ENTER.

The LCD on the remote prompts you for the component you want to control (for example DVD or TV).

3 Press the input function button for the component you want to control, then press ENTER.

PRES KEY blinks in the LCD display.3

4 Point the two remote controls towards each other, then press the button that will be doing the learning on this receiver’s remote control.

PRES KEY lights to indicate the remote is ready to accept a signal.

- The remote controls should be 3 cm (1 inch) apart.

5 Press the corresponding button on the other remote control that is sending (teaching) the signal to this receiver’s remote control.

For example, if you want to learn the playback control button as you vary the distance between the two remotes, until the LCD display shows OK.4

If for some reasons the operation hasn’t been learned the LCD will display ERROR briefly, and then display PRES KEY again. If this happens, keep pressing the (teaching) button as you vary the distance between the two remotes, until the LCD display shows OK.5

Certain buttons represent operations that cannot be learned from other remote controls. The buttons available are shown below:

Note

1 *When using a Pioneer HDD recorder, please select PIONEER DVR 450, 451 or 452.

2 *When using a Pioneer flat panel TV released prior to summer 2005, please select preset code 644.

3 *You can’t assign TV CONTROL buttons (TV CH ++/–, TV VOL ++/–, INPUT, and MUTE) can only be learned after the operation selection switch is set to TV.

4 *Note that interference from TVs or other devices will sometimes result in the remote control learning the wrong signal.

5 *Some commands from other remote controls cannot be learned, but in most cases the remotes just need to be moved closer together or farther apart.

- If the remote LCD shows FULL, it means the memory is full. See Erasing one of the remote control button settings above to erase a programmed button you’re not using to free up more memory (note that some signals may take more memory than others).
Controlling the rest of your system (In case of SC-27)

6 To program additional signals for the current component repeat steps 4 and 5. To program signals for another component, exit and repeat steps 1 through 5.

7 Press and hold MULTI OPERATION for a couple of seconds to exit and store the operation(s).

Erasing one of the remote control button settings
This erases one of the buttons you have programmed and restores the button to the factory default.

1 While pressing MULTI OPERATION, press HOME MENU.
   The remote LCD display shows SETUP.
2 Use ↑/↓ to select ERASE, then press ENTER.
   The LCD on the remote prompts you for the component corresponding to the button setting to be erased.
3 Press the input function button corresponding to the command to be erased, then press ENTER.
   The LCD display flashes PRES KEY.
4 Press and hold the button to be erased for two seconds.
   The LCD display shows OK or NO CODE to confirm the button has been erased.
5 Repeat step 4 to erase other buttons.
6 Press and hold MULTI OPERATION for a couple of seconds when you’re done.

Confirming preset codes
Use this feature to check which preset code is assigned to an input function button.

1 While pressing MULTI OPERATION, press HOME MENU.
   The remote LCD display shows SETUP.
2 Use ↑/↓ to select READ ID, then press ENTER.
   The LCD on the remote prompts you for the input function button you want to check.
3 Press the button of the component for which you want to check the preset code, then press ENTER.
   The brand name and preset code appears in the display for three seconds.

Renaming input function names
You can customize the names that appear on the remote LCD when you select an input function (for example, you could change the name of DVR to HDD/DVR).

1 While pressing MULTI OPERATION, press HOME MENU.
   The remote LCD display shows SETUP.
2 Use ↑/↓ to select RENAME, then press ENTER.
   The LCD on the remote prompts you for the button of the input function you want to rename.
3 Press the input function button you want to rename then press ENTER.
4 Use ↑/↓ to select NAME EDT, then press ENTER.
   To reset the button to its original (default) name, select NAME RST above.
5 Edit the name of the input function in the remote control LCD, pressing ENTER when you’re finished.
   Use ↑/↓ to change the character and ←/→ to move forward/back a position. The name can be up to eight characters (the possible characters are listed below).

   ABCDEFGHIJKLMNOPQRSTUVWXYZ
   0123456789 \ / * + – 

Note
1 When Selecting preset codes directly on page 96 are set, all the signals learned in the input function buttons are cleared. This function is convenient when you want to reset some but not all of input function buttons.
**Direct function**

- Default setting: ON

You can use the direct function feature to control one component using the remote control while at the same time, using your receiver to playback a different component. This could let you, for example, use the remote control to set up and listen to a CD on the receiver, and then use the remote control to rewind a tape in your VCR while you continue to listen to your CD player.

When direct function is on, any component you select (using the input function buttons) will be selected by both the receiver and the remote control. When you turn direct function off, you can operate the remote control without affecting the receiver.

1. While pressing MULTI OPERATION, press HOME MENU.
   The remote LCD display shows SETUP.
2. Use ‹/› to select DIRECT F, then press ENTER.
   The LCD on the remote prompts you for the button of the input function you want to control.
3. Press the input function button for the component you want to control, then press ENTER.
4. Use ‹/› to switch direct function ON or OFF, then press ENTER.
   The LCD shows OK to confirm the setting.

**Multi Operation and System Off**

The Multi Operation feature allows you to program a series of up to 5 commands for the components in your system. For example, you could turn on your TV, turn on your DVD player and start playing the loaded DVD using only two buttons on the remote control.

Similar to multi operations, System Off allows you to use one button to stop and switch off a series of components in your system at the same time.¹

**Programming a multi-operation or a shutdown sequence**

Set the remote control operation mode selector switch to RECEIVER when you want to program this receiver’s operations, to SOURCE when you want to program operations of other components.

1. While pressing MULTI OPERATION, press HOME MENU.
   The remote LCD display shows SETUP.
2. Use ‹/› to select MULTI OP or SYS OFF from the menu and press ENTER.
   If you selected Multi Operation (MULTI OP), the LCD on the remote prompts you for an input function button.
   If you selected System Off (SYS OFF), go to step 4.
3. Press the input function button for the component that will start the multi-operation, then press ENTER.
   For example, if you want to start the sequence by switching on your DVD player, press DVD.
4. Use ‹/› to select CODE EDT, then press ENTER.
   To erase any previously stored multi-operations (or shutdown sequences) select CODE ERS above.
5. Use ‹/› to select a command in the sequence, then press ENTER.
6. If necessary, press the input function button for the component whose command you want to input.
   This is only necessary if the command is for a new component (input function).
7. Select the button for the command you want to input.
   The following remote control commands can be selected:

---

¹ Before Multi Operation and System Off will work correctly, you must setup the remote to work with your TV and other components (see Operating multiple receivers on page 103 for more on this).
- Some units may take some time to power up, in which case multiple operations may not be possible.
- Power on and off commands only work with components that have a standby mode.
Controlling the rest of your system (In case of SC-27)

You don’t need to program the receiver to switch on or off. This is done automatically.

* You don’t need to program the receiver to switch on or off. This is done automatically.

* Program the receiver to switch off in a shutdown sequence (except DVD recorders);

These take priority in multi operations (not shutdown).

8 Repeat steps 5 to 7 to program a sequence of up to five commands.

9 When you’re finished, use / to select EXIT from the menu and press ENTER. You will return to the remote control Setup menu. Select * EXIT * again to exit.

Using multi operations

You can start multi operations with the receiver switched on, or in standby.

1 Press MULTI OPERATION. MULTI OP flashes in the display.

2 Press  SOURCE. The command sequence you programmed will run, then all Pioneer components will switch off1, followed by this receiver.

Using System off

1 Press MULTI OPERATION. MULTI OP flashes in the display.

2 Press  SOURCE. The command sequence you programmed will run, then all Pioneer components will switch off1, followed by this receiver.

Note

1 In order to avoid accidently switching off a DVD recorder that is currently recording, no DVD recorder power off codes are sent.
Controlling the rest of your system (In case of SC-27)

Controls for TVs

This remote control can control components after entering the proper codes or teaching the receiver the commands (see Operating multiple receivers on page 103 for more on this). Set the remote control operation selector switch to SOURCE, then press the other device operation button of the device you want to operate.

- TV CONTROL on the remote control are dedicated to control the TV assigned to the TV operation selector switch.

Controlling the rest of your system (In case of SC-25)

Important
- This section includes explanations for the SC-25’s remote control. For instructions for the SC-27’s remote control, see Controlling the rest of your system (In case of SC-27) on page 96.

Operating multiple receivers
The remote control included with this receiver can be used to operate up to three other receivers (of the same model as this receiver) in addition to this receiver. The receiver to be operated is switched by inputting the preset code to set the remote control setting.
- Set the remote modes on the receivers before using this function (see Remote Control Mode Setup on page 130).

1 Check the operation selector switch to MAIN.
2 Press RECEIVER.
3 Press and hold REMOTE SETUP, then release it after the LED flashes twice.
4 Use the number buttons to enter the 5-digit preset code (see below).
   - Receiver 1: 6 1 9 3 5 (Default)
   - Receiver 2: 6 2 6 3 0
   - Receiver 3: 6 2 6 3 1
   - Receiver 4: 6 2 6 3 2
When the preset code is fully input, the LED flashes once to indicate that the setting is completed.
To operate another receiver, start over from step 1 to input its preset code.

Setting the remote to control other components
Most components can be assigned to one of the input function buttons (such as DVD or CD) using the component’s manufacturer preset code stored in the remote.
However, there are cases where only certain functions may be controllable after assigning the proper preset code, or the codes for the manufacturer in the remote control will not work for the model that you are using.
If you can’t find a preset code that matches the component you want to control, you can still teach the remote individual commands from another remote control (see Programming signals from other remote controls on page 104).

Note
- You can cancel or exit any of the steps by pressing RECEIVER. To go back a step, press RETURN.
- After ten seconds of inactivity, the remote automatically exits the operation.

Selecting preset codes directly
1 Press the input function button for the component you want to control.1
   When assigning preset codes to TV CONTROL, press TV CTRL here.
2 Press and hold REMOTE SETUP, then release it after the LED flashes twice.
3 Use the number buttons to enter the 5-digit preset code.
   See Preset code list on the separate booklet.
   The LED flashes twice when the preset code has been properly registered. When the preset code is fully input, the LED flashes once to indicate that the setting has failed.

Note
1 You can’t assign RECEIVER, TUNER, HOME MEDIA GALLERY, iPod USB, XM or SIRIUS.
4 Repeat steps 1 through 3 for the other components you want to control.
To try out the remote control, switch the component on or off (into standby) by pressing SOURCE. If it doesn’t seem to work, select the next code from the list (if there is one).

**Programming signals from other remote controls**

If the preset code for your component is not available, or the available preset codes do not operate correctly, you can program signals from the remote control of another component. This can also be used to program additional operations (buttons not covered in the presets) after assigning a preset code.

1 Press and hold REMOTE SETUP, then release it after the LED flashes twice.
2 Use the number buttons to enter 9, 7, 5.
The LED flashes twice.
3 Press the input function button for the component you want to control.
4 Point the two remote controls towards each other, then press the button that will be doing the learning on this receiver’s remote control.
The LED flashes continuously for about 5 seconds.

- The remote controls should be 3 cm (1 inch) apart.
5 Press the corresponding button on the other remote control that is sending (teaching) the signal to this receiver’s remote control.
For example, if you want to learn the playback control signal, press and hold briefly. If the LED flashes twice then turns off, this indicates that learning has been successful. If the LED only flashes once, learning has failed.

6 To program additional signals for the current component repeat steps 4 and 5.
To program signals for another component, exit and repeat steps 1 through 5.

**Erasing the remote control button settings**

This erases the buttons you have programmed and restores the button to the factory default.

1 Press and hold REMOTE SETUP, then release it after the LED flashes twice.
2 Use the number buttons to enter 9, 7, 6.
The LED flashes twice.
3 Press the input function button corresponding to the command to be erased, then press the button to be erased twice.
To erase all the settings stored at the input function buttons, press the input function button twice here. The LED flashes twice to confirm the button has been erased.
4 Repeat step 3 to erase other buttons.

---

**Note**

1 The remote can store about 200 preset codes (this has been tested with codes of Pioneer format only).
2 You can’t assign TUNER, HOME MEDIA GALLERY, iPod USB, XM or SIRIUS.
3 The TV CONTROL buttons (TV CH +/–, TV VOL +/– and INPUT) can only be learned after the TV CTRL is pressed.
4 Note that interference from TVs or other devices will sometimes result in the remote control learning the wrong signal.
5 Some commands from other remote controls cannot be learned, but in most cases the remotes just need to be moved closer together or farther apart.
6 If the LED flashes once, it means the memory is full. See Erasing one of the remote control button settings above to erase a programmed button you’re not using to free up more memory (note that some signals may take more memory than others).
Controlling the rest of your system (In case of SC-25)

Multi Operation and System Off
The Multi Operation feature allows you to program a series of up to 32 commands for the components in your system. For example, you could turn on your TV, turn on your DVD player and start playing the loaded DVD using only two buttons on the remote control.

Similar to multi operations, System Off allows you to use one button to stop and switch off a series of components in your system at the same time. The System Off feature allows you to program a series of 5 commands for the components in your system.1

Programming a multi-operation

1 Press and hold REMOTE SETUP, then release it after the LED flashes twice.

2 Use the number buttons to enter 9, 9, 5.
   The LED flashes twice.
   If you selected System Off, go to step 3.
   If you selected Multi Operation, go to step 4.

3 Press the SOURCE button.

4 Press the input function button for the component whose command you want to input, then press the button for the command you want to input.
   For example, if you want to start the sequence by switching on your DVD player, press DVD, then press SOURCE.

The following remote control commands can be selected:

- You don’t need to program the receiver to switch on or off. This is done automatically.

With Pioneer components, you don’t need to:
- program the power to switch off in a shutdown sequence (except DVD recorders);
these take priority in multi operations (not shutdown).

5 Repeat step 4 to program a sequence.
- A space of 250 ms can be input between commands by pressing REMOTE SETUP between commands.
- If the LED does not light when the input function button is pressed, this indicates that there is no command for that input function.

Using multi operations
You can start multi operations with the receiver switched on, or in standby.

1 Press MULTI OPE.

2 Press an input function button that has been set up with a multi operation.
   The receiver switches on (if it was in standby) and the programmed multi operation is performed automatically.

Note
1 Before Multi Operation and System Off will work correctly, you must setup the remote to work with your TV and other components (see Operating multiple receivers on page 103 for more on this).
   - Some units may take some time to power up, in which case multiple operations may not be possible.
   - Power on and off commands only work with components that have a standby mode.
Controlling the rest of your system (In case of SC-25)

Using System off

1 Press MULTI OPE.
2 Press SOURCE.
The command sequence you programmed will run, then all Pioneer components will switch off, followed by this receiver.

Resetting the remote control presets
This will erase all preset remote control preset codes and programmed buttons.
1 Check the operation selector switch to MAIN.
2 Press RECEIVER.
3 Press and hold REMOTE SETUP, then release it after the LED flashes twice.
4 Use the number buttons to enter 9, 8, 1.
The LED flashes four times to indicate that the resetting is completed.

Default preset codes

Chapter 11: The Advanced MCACC menu

Important

- The procedure for setting the receiver operation mode differs for the remote controls included with the SC-27 and SC-25. For the SC-27’s remote control, set the remote control operation selector switch to RECEIVER. For the SC-25’s remote control, press the RECEIVER button. When “set the remote control to the receiver operation mode” is indicated in these instructions, use the respective procedure described above.

Making receiver settings from the Advanced MCACC menu

The Advanced MCACC (Multi Channel ACoustic Calibration) system was developed in Pioneer’s laboratories with the aim of making it possible for home users to perform adjustments of the same level as in a studio easily and with high precision. The acoustic characteristics of the listening environment are measured and the frequency response is calibrated accordingly to allow high precision, automatic analysis and optimal calibration of the sound field to bring it closer to a studio environment than ever before. Furthermore, while it was previously difficult to eliminate standing waves, this receiver is equipped with a standing wave control function using a unique process to perform acoustic analysis and reduce their influence.

This section describes how to calibrate the sound field automatically and fine-adjust the sound field data manually.

SC-27:

1. Switch on the receiver and your TV. Use RECEIIVER to switch on.
   - If headphones are connected to the receiver, disconnect them.

2. Set the remote control to the receiver operation mode, then press HOME MENU.
   - A Graphical User Interface (GUI) screen appears on your TV. Use \( \text{and} \) and ENTER to navigate through the screens and select menu items. Press RETURN to confirm and exit the current menu.
   - Press HOME MENU at any time to exit the HOME MENU.
   - The screen saver will automatically appear after five minutes of inactivity.

3. Select ‘Advanced MCACC’ from the HOME MENU, then press ENTER.

4. Select the setting you want to adjust.
   - Full Auto MCACC – See Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46 for a quick and effective automatic surround setup.

Note

1. Make sure not to switch off the power when using the HOME MENU.
2. You can’t use the HOME MENU when the HOME MEDIA GALLERY, XM, SIRIUS or iPod/USB input function is selected (in either the main or sub zone). When you set ZONE 2, ZONE 3 or ZONE 2&3 to ON (page 91), you can’t use the HOME MENU.
The Advanced MCACC menu

- **Auto MCACC** – See Automatic MCACC (Expert) on page 110 for a more detailed MCACC setup. In addition, the Full Band Phase Control function calibrates the frequency-phase characteristics of the connected speakers.
- **Manual MCACC** – Fine-tunes your speaker settings and customize the Acoustic Calibration EQ (see Manual MCACC setup on page 112).
- **Demo** – No settings are saved and no errors occur. When the speakers are connected to this receiver, the test tone is output repeatedly. Press **RETURN** to cancel the test tone.

### Automatic MCACC (Expert)

If your setup requires more detailed settings than those provided in **Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control)** on page 46, you can customize your setup options below. You can calibrate your system differently for up to six different MCACC presets, which are useful if you have different listening positions depending on the type of source (for example, watching movies from a sofa, or playing a video game close to the TV).

#### Important
- Make sure the microphone/speakers are not moved during the Auto MCACC Setup.
- Using the Auto MCACC Setup will overwrite any existing settings for the MCACC preset you select.

#### CAUTION
- The test tones used in the Auto MCACC Setup are output at high volume.

**THX®**

THX is a trademark of THX Ltd., which may be registered in some jurisdictions. All rights reserved.

1. Select ‘Auto MCACC’ from the Advanced MCACC menu, then press **ENTER**.
   - If the Advanced MCACC screen is not displayed, refer to **Making receiver settings from the Advanced MCACC menu** on page 109.

2. Select the parameters you want to set.
   - Use ↑/↓ to select the item, then use ←/→ to set.

   - **Auto MCACC** – The default is **ALL** (recommended), but you can limit the system calibration to only one setting (to save time) if you want.
   - The available options are **ALL**, **Keep SP System**, **Speaker Setting**, **Channel Level**, **Speaker Distance**, **EQ Pro & S-Wave**, and **Full Band Phase Ctrl**.
   - **EQ Type** (only available when the Auto MCACC Menu above is **EQ Pro & S-Wave**) – This determines how the frequency balance is adjusted. After a single calibration is performed, each of the following three correction curves can be stored separately in the MCACC memory. **SYMMETRY** (default) implements symmetric correction for each pair of left and right speakers to flatten the frequency-amplitude characteristics. **ALL CH ADJ** is a ‘flat’ setting where all the speakers are set individually so no special weighting is given to any one channel. **FRONT ALIGN** sets all speakers in accordance with the front speaker settings (no equalization is applied to the front left and right channels).

### Note

1. These are stored in memory and referred to as **MEMORY1** to **MEMORY6** until you rename them in **Data Management** on page 121.
2. You may also want to have separate calibration settings for the same listening position, depending on how you’re using your system.
3. Except in cases where you are only adjusting one parameter (i.e., channel level) from the Auto MCACC menu (step 2).
4. The EQ Pro & S-Wave measurement is also taken when Keep SP System or EQ Pro & S-Wave is selected. See Acoustic Calibration EQ Professional on page 115 for more on this.
5. Either effect of Acoustic Calibration EQ Professional and Standing Wave can be switched on and off in the respective MCACC preset. For details, see Setting the Audio options on page 88.
6. If you selected **ALL** as your Auto MCACC menu, you can specify the MCACC preset where you want to save the **ALL CH ADJ** and **FRONT ALIGN** settings.
The Advanced MCACC menu

- THX Speaker (only available when the Auto MCACC Menu above is ALL or Speaker Setting) – Select YES if you are using THX speakers (set all speakers to SMALL), otherwise leave it set to NO.

- STAND.WAVE Multi-Point (only available when the Auto MCACC Menu above is EQ Pro & S-Wave) – In addition to measurements at the listening position, you can use two more reference points for which test tones will be analyzed for standing waves. This is useful if you want to get a balanced ‘flat’ calibration for several seating positions in your listening area.1

Place the microphone at the reference point indicated on-screen and note the last microphone placement will be at your main listening position:

3 Connect the microphone to the MCACC SETUP MIC jack on the front panel. Make sure there are no obstacles between the speakers and the microphone.

If you have a tripod, use it to place the microphone so that it’s about ear level at your normal listening position. If you do not have a tripod, use some other object to install the microphone.2

4 When you’re finished settings the options, select START then press ENTER.

5 Follow the instructions on-screen.
   - Make sure the microphone is connected.
   - If you’re using a subwoofer, it is automatically detected every time you switch on the system. Make sure it is on and the volume is turned up.

6 Wait for the Auto MCACC Setup to finish outputting test tones.
   A progress report is displayed on-screen while the receiver outputs test tones to determine the speakers present in your setup. Try to be as quiet as possible while it’s doing this.
   - Do not adjust the volume during the test tones. This may result in incorrect speaker settings.
   - With error messages (such as Too much ambient noise! or Check microphone) select RETRY after checking for ambient noise (see Problems when using the Auto MCACC Setup on page 48) and verifying the mic connection. If there doesn’t seem to be a problem, you can simply select GO NEXT and continue.

7 If necessary, confirm the speaker configuration in the GUI screen.3
   The configuration shown on-screen should reflect the actual speakers you have.
   If no operations are performed for 10 seconds while the speaker configuration check screen is being displayed, the Auto MCACC Setup will resume automatically. In this case, you don’t need to select OK and press ENTER in step 8.

- If you see an ERR message (or the speaker configuration displayed isn’t correct), there may be a problem with the speaker connection. If selecting RETRY doesn’t work, turn off the power and check the speaker connections. If there doesn’t seem to be a problem, you can simply use ↑/↓ to select the speaker and ↔ to change the setting and continue.
   - If Reverse Phase is displayed, the speaker’s wiring (+ and –) may be inverted. Check the speaker connections.4
     – If the connections were wrong, turn off the power, disconnect the power cord, then reconnect properly.

Note

1 Switch the Multi-Point setting NO if you only use one listening position.
2 It may not be possible to measure correctly if the microphone is placed on a table, sofa, etc.
3 This screen is only shown if you selected ALL or Speaker Setting from the Auto MCACC menu.
4 If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the phase (dipole speakers, reflective speakers, etc.), Reverse Phase may be displayed even if the speakers are properly connected.
The Advanced MCACC menu

After this, perform the Full Auto MCACC procedure again.
- If the connections were right, select GO NEXT and continue.

8 Make sure ‘OK’ is selected, then press ENTER.
A progress report is displayed on-screen while the receiver outputs more test tones to determine the optimum receiver settings for channel level, speaker distance, and Acoustic Calibration EQ.

Again, try to be as quiet as possible while this is happening. It may take 3 to 7 minutes.
- If you selected a STAND.WAVE Multi-Point setup (in step 2), you will be asked to place the mic at the 2nd and 3rd reference points before finally placing it at your main listening position.

9 The Auto MCACC Setup procedure is completed and the Advanced MCACC menu reappears automatically. The settings made in the Auto MCACC Setup should give you excellent surround sound from your system, but it is also possible to adjust these settings manually using the Manual MCACC setup menu (starting below) or Manual SP Setup menu (starting on page 124).¹

You can also choose to view the settings by selecting individual parameters from the MCACC Data Check screen:
- **Speaker Setting** – The size and number of speakers you’ve connected (see page 124 for more on this)
- **Channel Level** – The overall balance of your speaker system (see page 113 or 125 for more on this)
- **Speaker Distance** – The distance of your speakers from the listening position (see page 114 or 126 for more on this)²
- **Standing Wave** – Filter settings to control lower ‘boomy’ frequencies (see page 114 for more on this)
- **Acoustic Cal EQ** – Adjustments to the frequency balance of your speaker system based on the acoustic characteristics of your room (see page 115 for more on this)

- **Group Delay** – The original characteristics of group delay of the speakers calibrated and the targeted characteristics can be displayed graphically (see Group Delay on page 120 for more on this).
- **Output PC** – The data transfer mode with the connected computer is set. The graphs of the reverb characteristics and group delay characteristics before and after calibration and the various MCACC parameters can be checked (see Output PC on page 120 for more on this).

Press RETURN after you have finished checking each screen. When you’re finished, select RETURN to go back to the HOME MENU.
Be sure to disconnect the microphone from this receiver upon completion of the Auto MCACC Setup.

**Manual MCACC setup**

You can use the settings in the Manual MCACC setup menu to make detailed adjustments when you’re more familiar with the system. Before making these settings, you should have already completed Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46.

You only need to make these settings once (unless you change the placement of your current speaker system or add new speakers).

**CAUTION**
- The test tones used in the Manual MCACC setup are output at high volume.

**Important**
- You will need to first specify the MCACC preset you want to adjust by pressing MCACC before pressing HOME MENU (step 2 in Making receiver settings from the Advanced MCACC menu on page 109).
- For some of the settings below, you’ll have to connect the setup microphone to the front panel and place it about ear level at your normal listening position. Press HOME MENU to display the HOME MENU before you connect the microphone to this receiver. If the microphone is connected while the HOME MENU is not being displayed, the display will change to the Full Auto MCACC under Advanced MCACC.

**Note**
- Depending on the characteristics of your room, sometimes identical speakers with cone sizes of around 12 cm (5 inches) will end up with different size settings. You can correct the setting manually using the Manual speaker setup on page 129.
- The subwoofer distance setting may be farther than the actual distance from the listening position. This setting should be accurate (taking delay and room characteristics into account) and generally does not need to be changed.
- If Auto MCACC Setup measurement results are incorrect due to the interaction of the speakers and viewing environment, we recommend adjusting the settings manually.

² Since the distance measurements have been set according to the sound characteristics of your speakers, there are cases where (for optimal surround sound) the actual distance may differ from the speaker distance setting.
The Advanced MCACC menu

- See Problems when using the Auto MCACC Setup on page 48 for notes regarding high background noise levels and other possible interference.
- If you’re using a subwoofer, switch it on and turn up the volume to the middle position.

1. Select ‘Manual MCACC’ from the Advanced MCACC menu.

See Making receiver settings from the Advanced MCACC menu on page 109 if you’re not already at this screen.

2. Select the setting you want to adjust.

If you’re doing this for the first time, you might want to make these settings in order.

- **Fine Channel Level** – Make fine adjustments to the overall balance of your speaker system (see Fine Channel Level below).
- **Fine SP Distance** – Make precise delay settings for your speaker system (see Fine Speaker Distance below).
- **Standing Wave** – Control overly resonant low frequencies in your listening room (see Standing Wave on page 114).

The last two settings are specifically for customizing the parameters explained in Acoustic Calibration EQ Adjust on page 115:

- **EQ Adjust** – Manually adjust the frequency balance of your system while listening to test tones (see Acoustic Calibration EQ Adjust on page 115).
- **EQ Professional** – Calibrate your system based on the direct sound coming from the speakers and make detailed settings according to your room’s reverb characteristics (see Acoustic Calibration EQ Professional on page 115).
- **Precision Distance** – Fine-adjusting the positions of the speakers (see Precision Distance (SC-27 only) on page 117).

### Fine Channel Level

- Default setting: 0.0dB (all channels)

You can achieve better surround sound by properly adjusting the overall balance of your speaker system. You can adjust the Channel Level of each speaker in 0.5 dB increments. The following setting can help you make detailed adjustments that you may not achieve using the Manual speaker setup on page 124.

The volume increases to the 0.0 dB reference level.

2. Adjust the level of the left channel.

This will be the reference speaker level, so you may want to keep the level around 0.0dB so that you’ll have plenty of room to adjust the other speaker levels.

3. Select each channel in turn and adjust the levels (+/-10.0 dB) as necessary.

   Use ←/→ to adjust the volume of the speaker you selected to match the reference speaker. When it sounds like both tones are the same volume, press ↓ to confirm and continue to the next channel.

4. When you’re finished, press RETURN.

   You will return to the Manual MCACC setup menu.
Fine Speaker Distance

- Default setting: 10'00" (all speakers)

For proper sound depth and separation with your system, it is necessary to add a slight bit of delay to some speakers so that all sounds will arrive at the listening position at the same time. You can adjust the distance of each speaker in 1/2 inch increments. The following setting can help you make detailed adjustments that you may not achieve using the Manual speaker setup on page 124.

1. Select ‘Fine SP Distance’ from the Manual MCACC setup menu.

2. Adjust the distance of the left channel from the listening position.

3. Select each channel in turn and adjust the distance as necessary.

Use \( \downarrow, \uparrow \) to adjust the delay of the speaker you selected to match the reference speaker. The delay is measured in terms of speaker distance from 0'00-1/2" to 45'00".

Listen to the reference speaker and use it to measure the target channel. From the listening position, face the two speakers with your arms outstretched pointing at each speaker. Try to make the two tones sound as if they are arriving simultaneously at a position slightly in front of you and between your arm span.1

When it sounds like the delay settings are matched up, press \( \downarrow, \uparrow \) to confirm and continue to the next channel.

- For comparison purposes, the reference speaker will change depending on which speaker you select.
- If you want to go back and adjust a channel, simply use \( \uparrow, \downarrow \) to select it.

4. When you’re finished, press RETURN. You will return to the Manual MCACC setup menu.

Standing Wave

- Default setting: ON \( \uparrow, \downarrow \) ATT 0.0dB (all filters)

Acoustic standing waves occur when, under certain conditions, sound waves from your speaker system resonate mutually with sound waves reflected off the walls in your listening area. This can have a negative effect on the overall sound, especially at certain lower frequencies. Depending on speaker placement, your listening position, and ultimately the shape of your room, it results in an overly resonant ("boomy") sound. The Standing Wave Control uses filters to reduce the effect of overly resonant sounds in your listening area. During playback of a source, you can customize the filters used for Standing Wave Control for each of your MCACC presets.3

2. Adjust the parameters for the Standing Wave Control.

- Filter Channel – Select the channel to which you will apply the filter(s): MAIN (all except center channel and subwoofer), Center or SW (subwoofer).
- TRIM (only available when the filter channel above is SW) – Adjust the subwoofer channel level (to compensate for the difference in output post-filter).

Note

1. If you can’t seem to achieve this by adjusting the distance setting, you may need to change the angle of your speakers very slightly.
2. For better audibility, the subwoofer emits a continuous test tone (oscillating pulses are heard from your other speakers). Note that it may be difficult to compare this tone with the other speakers in your setup (depending on the low frequency response of the reference speaker). You can switch on or off the Standing Wave in the AUDIO PARAMETER menu. See Setting the Audio options on page 88 for more on this.
3. Since they will be overwritten, you may want to save the standing wave settings made with the Auto MCACC Setup to another MCACC preset.

Standing Wave control filter settings cannot be changed during playback of sources using the HDMI connection.

When Standing Wave is selected for an MCACC preset memory where STAND.WAVE is set to OFF in the AUDIO PARAMETER, STAND.WAVE ON is automatically selected.
The Advanced MCACC menu

- **Freq / Q / ATT** – These are the filter parameters where **Freq** represents the frequency you will be targeting and **Q** is the bandwidth (the higher the Q, the narrower the bandwidth, or range) of the attenuation (**ATT**; the amount of reduction to the targeted frequency).

3. When you’re finished, press RETURN.
   You will return to the Manual MCACC setup menu.

**Acoustic Calibration EQ Adjust**

- Default setting: **ON** / **0.0dB** (all channels/bands)

Acoustic Calibration Equalization is a kind of room equalizer for your speakers (excluding the subwoofer). It works by measuring the acoustic characteristics of your room and neutralizing the ambient characteristics that can color the original source material (providing a 'flat' equalization setting). If you’re not satisfied with the adjustment provided in **Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control)** on page 46 or **Automatic MCACC (Expert)** on page 110, you can also adjust these settings manually to get a frequency balance that suits your tastes.²

![Manual MCACC setup menu](image)

Precision Distance is only for SC-27.

2. Select the channel(s) you want and adjust to your liking.

![EQ Adjust menu](image)

Use **†/‡** to select the channel.

Use **↔** to select the frequency and **†/‡** to boost or cut the EQ. When you’re finished, go back to the top of the screen and press **↔** to return to **Ch**, then use **†/‡** to select the channel.

- **The OVER!** indicator shows in the display if the frequency adjustment is too drastic and might distort. If this happens, bring the level down until OVER! disappears from the display.

**Tip**

- Changing the frequency curve of one channel too drastically will affect the overall balance. If the speaker balance seems uneven, you can raise or lower channel levels using test tones with the **TRIM** feature. Use **†/‡** to select **TRIM**, then use **↔** to raise or lower the channel level for the current speaker.

3. When you’re finished, press RETURN.
   You will return to the Manual MCACC setup menu.

**Acoustic Calibration EQ Professional**

This setup minimizes the unwanted effects of room reverberation by allowing you to calibrate your system based on the direct sound coming from the speakers. It can also provide you with a graphical output of the frequency response of your room.³

**How to use Acoustic Calibration EQ Professional**

If you find that lower frequencies seem overly reverberant in your listening room (i.e., it sounds ‘boomy’), or that different channels seem to exhibit different reverb characteristics, select **EQ Pro & S-Wave** (or **ALL**) for the **Auto MCACC** setting in **Automatic MCACC (Expert)** on page 110 to calibrate the room automatically. This should provide a balanced calibration that suits the characteristics of your listening room.

If you still aren’t satisfied with the results, the manual **Advanced EQ Setup** (below) provides a more customized calibration of your system using the direct sound coming from the speakers. This is done with the help of a graphical output that can be displayed on-screen, or using a computer (with software available from Pioneer — see **Output PC** on page 120).

**How to interpret the graphical output**

The graph shows decibels on the vertical axis and time (in milliseconds) on the horizontal axis. A straight line indicates a flat-response room (no reverb), whereas a sloping line indicates the presence of reverberation when outputting test tones. The sloping line will eventually flatten out when the reverberant sound stabilizes (this usually takes about 100 ms or so).

**Note**

1. You can switch on or off the Acoustic Calibration EQ feature in the **AUDIO PARAMETER** menu. See **Setting the Audio options** on page 88 for more on this.

2. When **EQ Adjust** is selected for an MCACC preset memory where **EQ** is set to **OFF** in the **AUDIO PARAMETER**, **EQ ON** is automatically selected.

3. This system allows you to customize your system calibration with the help of a graphical output that can be displayed on-screen, or using a computer (with software available from Pioneer—see **Output PC** on page 120 for more on this).
By analyzing the graph, you should be able to see how your room is responding to certain frequencies. Differences in channel level and speaker distance are taken into account automatically (compensation is provided for comparison purposes), and the frequency measurements can be examined both with and without the equalization performed by this receiver.

**Setting Acoustic Calibration EQ Professional according to your room characteristics**

Using the manual setup, you can set the time period at which the frequency response is analyzed, pinpointing the time that is best for system calibration with your particular room characteristics. The graph below shows the difference between conventional acoustic calibration and professional calibration (the gray circle indicates the point where the microphone captures sound during frequency analysis).

As soon as audio is output from your speaker system, it is influenced by room characteristics, such as walls, furniture, and the dimensions of the room. The sooner the frequency analysis, the less it is influenced by the room. We recommend an earlier time setting of 30-50ms to compensate for two major factors that will influence the sound of most rooms:

- **Reverberance of high vs. low frequencies** – Depending on your room, you may find that lower frequencies seem overly reverberant compared to higher frequencies (i.e. your room sounds ‘boomy’). This may result in a skewed frequency analysis if the measurement is done too late.

- **Reverb characteristics for different channels** – Reverber characteristics can be somewhat different for each channel. Since this difference increases as the sound is influenced by the various room characteristics, it is often better to capture a frequency analysis early on for smoother mixing of channel frequencies/sounds.

If your room isn’t affected by the factors above, it is often not necessary to make a 30-50ms setting. Later time settings may provide a more detailed sound experience with your speaker system. It is best to try and see what works best for your particular room.

Note that changing the room (for example, moving furniture or paintings) will affect the calibration results. In such cases, you should recalibrate your system.

**Using Acoustic Calibration EQ Professional**

1. Select ‘EQ Professional’, then press ENTER.
2. Select an option and press ENTER.
   - **Reverb Measurement** – Use this to measure the reverb characteristics of your room (for graphical output using a PC, see Connecting a PC for Advanced MCACC output on page 41 to connect an RS-232C cable before selecting this option).
   - **Reverb View** – You can check the reverb measurements made for specified frequency ranges in each channel.

---

**Notes**

1. Note that due to an effect known as ‘group delay’, lower frequencies will take longer to be generated than higher frequencies (this is most obvious when comparing the frequencies at 0 ms). This initial slope is not a problem (i.e. excessive reverb) with your listening room.

2. If the Reverb View procedure is performed after the Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46 or Reverb Measurement operation, depending on the standing wave control setting, differences may appear on the reverb graph.

With the Auto MCACC function, the reverberations are measured with the standing waves controlled, so the reverber characteristics graph shows the characteristics with the effect of the standing waves eliminated. By contrast, the Reverb Measurement function measures the reverberations without controlling the standing waves, so the graph indicates the reverber characteristics including the effect of the standing waves. If you wish to check the reverber characteristics of the room itself (with the standing waves as such), we recommend using the **Reverb Measurement** function.
The Advanced MCACC menu

- **Advanced EQ Setup** – Use this to select the time period that will be used for frequency adjustment and calibration, based on the reverb measurement of your listening area. Note that customizing system calibration using this setup will alter the settings you made in Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46 or Automatic MCACC (Expert) on page 110 and is not necessary if you’re satisfied with these settings.

3 If you selected ‘Reverb Measurement’, select EQ ON or OFF, and then START.

The following options determine how the reverb characteristics of your listening area are displayed in **Reverb View** and **Output PC** (see Connecting a PC for Advanced MCACC output on page 41):

- **EQ OFF** – You will see the reverb characteristics of your listening area without the equalization performed by this receiver (before calibration).
- **EQ ON** – You will see the reverb characteristics of your listening area with the equalization performed by this receiver (after calibration). Note that the EQ response may not appear entirely flat due to adjustments necessary for your listening area.

When the reverb measurement is finished, you can select **Reverb View** to see the results on-screen. See Professional Calibration EQ graphical output on page 137 for troubleshooting information.

4 If you selected ‘Reverb View’, you can check the reverb characteristics for each channel. Press RETURN when you’re done.

The reverb characteristics are displayed when the **Full Auto MCACC** or **Reverb Measurement** measurements are conducted. Use **leftrightarrow** to select the channel, frequency and calibration setting you want to check. Use **↑↓** to go back and forth between the three. The reverb characteristics graph before and after EQ calibration can be displayed by selecting **Calibration : Before / After**.

5 If ‘Advanced EQ Setup’ is selected, select the MCACC memory to be stored, then enter the desired time setting for calibration, and then select START. Based on the reverb measurement above, you can choose the time period that will be used for the final frequency adjustment and calibration. Even though you can make this setting without reverb measurement, it is best to use the measurement results as a reference for your time setting. For an optimal system calibration based on the direct sound coming from the speakers, we recommend using the **30-50ms** setting.

Use **leftrightarrow** to select the setting. Use **↑↓** to switch between them.

Select the setting from the following time periods (in milliseconds): **0-20ms, 20-40ms, 30-50ms, 40-60ms, 50-70ms and 60-80ms**. This setting will be applied to all channels during calibration.

When you’re finished, select **START**. It will take about 2 to 4 minutes for the calibration to finish. After the Acoustic Calibration Equalization is set, you are given the option to check the settings on-screen.

**Precision Distance** (SC-27 only)

Before using this function, perform the Full Auto MCACC Setup procedure (see page 46). Performing the Full Auto MCACC procedure corrects the distance to a precision of 1/2 inch, but the Precision Distance function lets you adjust the distance to the speakers (their position) with a precision of under 1/2 inch. Here, rather than correct the...
The Advanced MCACC menu

numerical value of the distance, actually move the physical positions of the speakers to fine-adjust (the subwoofer cannot be adjusted). The input from the microphone is indicated on the screen. Fine-adjust the positions of the speakers so that the gauge reading is maximum. The detailed distance adjustments that were previously performed by skilled installers by ear can easily be performed watching the gauge on the monitor. Place the microphone in the same position as when the microphone was connected and the Full Auto MCACC operation was performed.

1 Select ‘Precision Distance’ from the Manual MCACC setup menu.

2 Fine-adjust the positions of the speakers in sequence, starting from the front right channel.1

Test pulses are output from the speaker for the selected channel and from one other speaker. Move the position of the selected speaker 1/2 inch towards or away from the microphone. Watch the screen when doing so, and fine-adjust the positions of the speakers so that the gauge reading is maximum. Also, the channel serving as the standard differs according to the channel being adjusted. Do not move the speaker serving as the standard channel.

The maximum gauge reading is 10.0. (If the reading stays under 10.0, adjust the speaker for the maximum value.)

3 When you’re finished, press RETURN.

You will return to the Manual MCACC setup menu.

Note

1 If the microphone is placed in a different position from when the Auto MCACC procedure was performed, it may not be possible to adjust properly. In this case, we recommend performing the procedure at Fine Speaker Distance on page 114 in the Auto MCACC custom measurements, then performing the adjustment described here without moving the microphone.

2 The adjustment here is for adjusting for an error of 1/2 inch or less (not adjustable with the Auto MCACC Setup). 0.0 may be displayed after distance correction with the Auto MCACC Setup, but even in this case this adjustment allows you to optimize the correction. Note that if the Auto MCACC Setup is performed after completing the fine-adjustment here, the correction precision will drop to about 1/2 inch.

3 Select the setting you want to check.

• Speaker Setting – Used to check the settings of the speaker systems. See Speaker Setting below for more on this.

• Channel Level – Used to check the output level of the different speakers. See Channel Level below for more on this.

• Speaker Distance – Used to check the distance to the different speakers. See Speaker Distance below for more on this.

• Standing Wave – Used to check the standing wave control filter settings. See Standing Wave on page 119 for more on this.

• Acoustic Cal EQ – Used to check the calibration values of the listening environment’s frequency response. See Acoustic Cal EQ on page 120 for more on this.

Checking MCACC Data

At the procedure of Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46, the procedure of Automatic MCACC (Expert) on page 110 or after fine-adjusting at Manual MCACC setup on page 112, you can check your calibrated settings using the GUI screen or, if a computer is connected, on the computer’s screen.

1 Set the remote control to the receiver operation mode, then press HOME MENU.

A Graphical User Interface (GUI) screen appears on your TV. Use ↑ / ↓ / ← / → and ENTER to navigate through the screens and select menu items. Press RETURN to confirm and exit the current menu.

2 Select ‘MCACC Data Check’ from the HOME MENU.

3 Select the setting you want to check.

• Speaker Setting – Used to check the settings of the speaker systems. See Speaker Setting below for more on this.

• Channel Level – Used to check the output level of the different speakers. See Channel Level below for more on this.

• Speaker Distance – Used to check the distance to the different speakers. See Speaker Distance below for more on this.

• Standing Wave – Used to check the standing wave control filter settings. See Standing Wave on page 119 for more on this.

• Acoustic Cal EQ – Used to check the calibration values of the listening environment’s frequency response. See Acoustic Cal EQ on page 120 for more on this.
The Advanced MCACC menu

- **Group Delay** – Used to check the speakers’ group delay (both before and after calibration). See Group Delay on page 120 for more on this.
- **Output PC** – See Output PC on page 120 for more on this.

4 Press RETURN to go back to MCACC Data Check menu, repeating steps 2 and 3 to check other settings.

5 When you're finished, press RETURN. You will return to the HOME MENU.

**Speaker Setting**
Use this to display the speaker size and number of speakers. See Speaker Setting on page 124 for more on this.

1 Select ‘Speaker Setting’ from the MCACC Data Check menu.

2 Select the channel you want to check. Use ↑/↓ to select the channel. The corresponding channel on the layout diagram is highlighted.

**Channel Level**
Use this to display the level of the various channels. See Channel Level on page 125 for more on this.

1 Select ‘Channel Level’ from the MCACC Data Check menu.

2 When ‘MCACC’ is highlighted, use ↔/↑ to select the MCACC preset you want to check.

**Speaker Distance**
Use this to display the distance from the different channels to the listening position. See Speaker Distance on page 126 for more on this.

1 Select ‘Speaker Distance’ from the MCACC Data Check menu.

2 When ‘MCACC’ is highlighted, use ↔/↑ to select the MCACC preset you want to check.

The distance from the various channels set at the selected MCACC preset is displayed. ‘---’ is displayed for channels that are not connected.

**Standing Wave**
Use this to display the standing wave related adjustment values for the various MCACC memories. See Standing Wave on page 114 for more on this.

1 Select ‘Standing Wave’ from the MCACC Data Check menu.

2 When ‘Filter Channel’ is highlighted, use ↑/↓ to select the channel for which you want to check standing wave control.

The standing wave related calibration value for the selected channel stored at the selected MCACC preset and its graph are displayed.

3 Press ↔ to highlight ‘MCACC’, then use ↑/↓ to select the MCACC preset you want to check.
The Advanced MCACC menu

Acoustic Cal EQ
Use this to display the calibration values for the frequency response of the various channels set in the different MCACC presets. See Acoustic Calibration EQ Adjust on page 115 for more on this.

1 Select ‘Acoustic Cal EQ’ from the MCACC Data Check menu.

2 When ‘Ch’ is highlighted, use †/‡ to select the channel.
The calibration value for the frequency response of the selected channel stored at the selected MCACC preset and its graph are displayed.

3 Press † to highlight ‘MCACC’, then use †/‡ to select the MCACC preset you want to check.

Group Delay
Use this to display the calibrated speaker group delay results. See Using Full Band Phase Control on page 69 for more on this.

1 Select ‘Group Delay’ from the MCACC Data Check menu.

2 When ‘Channel’ is highlighted, use †/‡ to select the channel you want to check.
The result of group delay calibration for the selected channel is displayed.

When measurements have been performed with Full Auto MCACC selected at Advanced MCACC or with ALL or Full Band Phase Ctrl selected when Auto MCACC is selected, the graph before group delay calibration is also displayed.

When After is selected at Calibration, the group delay after calibration is displayed. Compared to when Before is selected, with After there is less difference in the delay between frequency bands and the group delay between the different channels is uniform, allowing you to check the full band phase control effect.

No Data is displayed if the selected group delay has not been measured.

Output PC
Before continuing, make sure you have completed step 2 in Checking MCACC Data on page 118. The data measured with the Advanced MCACC function is transmitted to the connected computer. The 3D graphs of the reverb characteristics and group delay characteristics before and after calibration and the MCACC results (parameters) can be checked.

1 Select ‘Output PC’ from MCACC Data Check menu and press ENTER.

When the receiver is ready for transmission, Start the MCACC application on your computer shows on the GUI screen.

2 Start the MCACC application on your computer.
Follow the instructions provided with the application. It will take about ten seconds for the transmission to complete, then you will be able to analyze the output on your computer. The various parameters, the reverb characteristics and group delay characteristics data used for display on the computer are not cleared when the power is turned off. If the reverb characteristics are re-measured, however, the data is overwritten.

3 When you’re finished, press RETURN.
You will return to the MCACC Data Check menu. Continue with other operations in the MCACC Data Check menu if necessary. Press RETURN again to exit the MCACC Data Check menu.

Note
1 To transmit data, the receiver and computer must be connected using an RS-232C cable and a special application must be installed on the computer. See Connecting a PC for Advanced MCACC output on page 41 on page 34 for more on this.
2 Only one set of reverb characteristics is stored on the receiver. If you wish to compare several different measurement results, transmit the data to the computer each time reverb measurements are taken.
**Data Management**

This system allows you to store up to six MCACC presets, allowing you to calibrate your system for different listening positions (or frequency adjustments for the same listening position). This is useful for alternate settings to match the kind of source you’re listening to and where you’re sitting (for example, watching movies from a sofa, or playing a video game close to the TV).

From this menu you can copy from one preset to another, name presets for easier identification and clear any ones you don’t need.

1. Set the remote control to the receiver operation mode, then press HOME MENU.

A Graphical User Interface (GUI) screen appears on your TV. Use 

![](image1) and to navigate through the screens and select menu items. Press RETURN to confirm and exit the current menu.

2. Select ‘Data Management’ from the HOME MENU.

3. Select the setting you want to adjust.
   - **Memory Rename** – Name your MCACC presets for easy identification (see **Renaming MCACC presets** below).
   - **MCACC Memory Copy** – Copy settings from one MCACC preset to another (see **Copying MCACC preset data** below).
   - **MCACC Memory Clear** – Clear any MCACC presets that you don’t want (see **Clearing MCACC presets** on page 122).

**Renaming MCACC presets**

If you have several different MCACC presets that you’re using, you may want to rename them for easier identification.

1. Select ‘Memory Rename’ from the Data Management setup menu.

2. Select the MCACC preset you want to rename, then select an appropriate preset name.

Use 

![](image2) to select the preset, then 

![](image3) to select a preset name.

3. Repeat for as many MCACC presets as necessary, then press RETURN when you’re finished.

You will return to the Data Management setup menu.

**Copying MCACC preset data**

If you want to manually adjust the Acoustic Calibration EQ (see **Manual MCACC setup** on page 112), we recommend copying your current settings to an unused MCACC preset. Instead of just a flat EQ curve, this will give you a reference point from which to start.

1. Select ‘MCACC Memory Copy’ from the Data Management setup menu.

2. Select the setting you want to copy.
   - **All Data** – Copies all the settings of the selected MCACC preset memory.
   - **Level & Distance** – Copies only the channel level and speaker distance settings of the selected MCACC preset memory.

3. Select the MCACC preset you’ll be copying the settings ‘From’, then specify where you want to copy them (‘To’).

Make sure you don’t overwrite an MCACC preset you’re currently using (this can’t be undone).

### Note

1. This can be done in Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46 or Automatic MCACC (Expert) on page 110, either of which you should have already completed.

2. The settings made in Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46 or Automatic MCACC (Expert) on page 110.
4 Select ‘OK’ to confirm and copy the settings. When MCACC Memory Copy? is displayed, select YES. If NO is selected, the memory is not copied. Completed! shows in the GUI screen to confirm the MCACC preset has been copied, then you automatically return to the Data Management setup menu.

Clearing MCACC presets
If you are no longer using one of the MCACC presets stored in memory, you can choose to clear the calibration settings of that preset.

1 Select ‘MCACC Memory Clear’ from the Data Management setup menu.

2 Select the MCACC preset you want to clear. Make sure you don’t clear an MCACC preset you’re currently using (this can’t be undone).

3 Select ‘OK’ to confirm and clear the preset. When MCACC Memory Clear? is displayed, select YES. If NO is selected, the memory is not cleared. Completed! shows in the GUI screen to confirm the MCACC preset has been cleared, then you automatically return to the Data Management setup menu.
Chapter 12: The system and the other setup

**Important**
- The procedure for setting the receiver operation mode differs for the remote controls included with the SC-27 and SC-25. For the SC-27's remote control, set the remote control operation selector switch to RECEIVER. For the SC-25’s remote control, press the RECEIVER button. When “set the remote control to the receiver operation mode” is indicated in these instructions, use the respective procedure described above.

Making receiver settings from the System Setup menu
The following section describes how to change the speaker-related settings manually and make various other settings (input selection, OSD language selection, etc.).

**SC-27:**

1. Switch on the receiver and your TV.
   Use the RECEIVER button to switch on.¹
   - If headphones are connected to the receiver, disconnect them.

2. Set the remote control to the receiver operation mode, then press HOME MENU.²
   A Graphical User Interface (GUI) screen appears on your TV. Use ¹/>/⁹ and ENTER to navigate through the screens and select menu items. Press RETURN to confirm and exit the current menu.

**Note**
1. Make sure not to switch off the power when using the System Setup menu.
2. You can’t use the HOME MENU when either the HOME MEDIA GALLERY, XM, SIRIUS or iPod/USB input function is selected or the headphones are connected. When you set ZONE 2, ZONE 3 or ZONE 2&3 to ON (page 91), you can’t use the HOME MENU.

3. Press HOME MENU at any time to exit the HOME MENU.

4. Select the setting you want to adjust.

   - **Manual SP Setup** – Sets the type of connection used for surround back terminals and the size, number distance and overall balance of the connected speakers (see Manual speaker setup below).
   - **Input Setup** – Specifies what you’ve connected to the digital, HDMI and component video inputs (see The Input Setup menu on page 48).
   - **OSD Language** – The GUI screen’s display language can be changed (see Changing the OSD display language (OSD Language) on page 45).
   - **Other Setup** – Changes customized settings to reflect how you are using the receiver (see The Other Setup menu on page 128).
Manual speaker setup

This receiver allows you to make detailed settings to optimize the surround sound performance. You only need to make these settings once (unless you change the placement of your current speaker system or add new speakers).

These settings are designed to customize your system, but if you’re satisfied with the settings made in Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46, it isn’t necessary to make all of these settings.

**CAUTION**

- The test tones used in the Manual SP Setup are output at high volume.

1. Select ‘Manual SP Setup’, then press ENTER.

   See Making receiver settings from the System Setup menu above if you’re not already at this screen.

2. Select the setting you want to adjust.

   If you are doing this for the first time, you may want to adjust these settings in order:

   - **Surr Back System** – Specifies how you are using your surround back speakers (see below).
   - **Speaker Setting** – Specifies the size and number of speakers you’ve connected (see below).
   - **Channel Level** – Adjusts the overall balance of your speaker system (page 125).
   - **Speaker Distance** – Specifies the distance of your speakers from the listening position (page 126).
   - **X-Curve** – Adjusts the tonal balance of your speaker system for movie soundtracks (page 126).
   - **THX Audio Setting** – Specifies whether you are using a THX speaker setup (page 126).

3. Make the adjustments necessary for each setting, pressing RETURN to confirm after each screen.

---

**Surround back speaker setting**

- **Default setting: Normal**

There are several ways you can use the surround back speaker channels with this system. In addition to a normal home theater setup where they are used for the surround back speakers, they can be used for bi-amping the front speakers or as an independent speaker system in another room.

   See Making receiver settings from the System Setup menu on page 123 if you’re not already at this screen.

2. Select the surround back speaker setting.

   - **Normal** – Select for normal home theater use with surround back speakers in your main (speaker system A) setup.
   - **Speaker B** – Select to use the (surround back) B speaker terminals to listen to stereo playback in another room (see Switching the speaker system on page 91).
   - **Front Bi-Amp** – Select this setting if you’re bi-amping your front speakers (see Bi-amping your speakers on page 26).
   - **ZONE 2** – Select to use the (surround back) B speaker terminals for an independent system in another zone (see Using the MULTI-ZONE controls on page 91).

3. When “Setting Change?” is displayed, select Yes. If No is selected, the setting is not changed.

   You will return to the Manual SP Setup menu.

**Speaker Setting**

Use this setting to specify your speaker configuration (size, number of speakers and crossover frequency). It is a good idea to make sure that the settings made in Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46 are correct. Note that this setting applies to all MCACC presets, and cannot be set independently.
The system and the other setup

1. Select ‘Speaker Setting’ from the Manual SP Setup menu.

   4a. Manual SP Setup

   1. Surr Back System
   2. Speaker Distance
   3. Speaker Setting
   4. Channel Level
   5. X-Curve
   6. THX Audio Setting

   4b. Speaker Setting

   1. Surr Back System
   2. Speaker Distance
   3. Speaker Setting
   4. Channel Level
   5. X-Curve
   6. THX Audio Setting

2. Choose the set of speakers that you want to set, then select a speaker size.

   Use ➩ tapping to select the size (and number) of each of the following speakers:

   • Front – Select LARGE if your front speakers reproduce bass frequencies effectively, or if you didn’t connect a subwoofer. Select SMALL to send the bass frequencies to the subwoofer.

   • Center – Select LARGE if your center speaker reproduces bass frequencies effectively, or select SMALL to send bass frequencies to the other speakers or subwoofer. If you didn’t connect a center speaker, choose NO (the center channel is sent to the front speakers).

   • Surr – Select LARGE if your surround speakers reproduce bass frequencies effectively. Select SMALL to send bass frequencies to the other speakers or subwoofer. If you didn’t connect surround speakers choose NO (the sound of the surround channels is sent to the front speakers or a subwoofer).

   • SB – Select the number of surround back speakers you have (one, two or none). Select LARGEx2 or LARGEx1 if your surround back speakers reproduce bass frequencies effectively. Select SMALLx2 or SMALLx1 to send bass frequencies to the other speakers or subwoofer. If you didn’t connect surround back speakers choose NO.

   • SW – LFE signals and bass frequencies of channels set to SMALL are output from the subwoofer when YES is selected. Choose the PLUS setting if you want the subwoofer to output bass sound continuously or you want deeper bass (the bass frequencies that would normally come out the front and center speakers are also routed to the subwoofer). If you did not connect a subwoofer choose NO (the bass frequencies are output from other speakers).

3. Select ‘X.OVER’ and set the crossover frequency. Frequencies below this point will be sent to the subwoofer (or LARGE speakers).

4. When you’re finished, press RETURN. You will return to the Manual SP Setup menu.

Channel Level

Using the channel level settings, you can adjust the overall balance of your speaker system, an important factor when setting up a home theater system.

1. Select ‘Channel Level’ from the Manual SP Setup menu.

   4c. Channel Level

   1. Surr Back System
   2. Speaker Distance
   3. Speaker Setting
   4. Channel Level
   5. X-Curve
   6. THX Audio Setting

2. Select a setup option.

   • MANUAL – Move the test tone manually from speaker to speaker and adjust individual channel levels.

   • AUTO – Adjust channel levels as the test tone moves from speaker to speaker automatically.

Note

1. If you select SMALL for the front speakers the subwoofer will automatically be fixed to YES. Also, the center, surround and surround back speakers can’t be set to LARGE if the front speakers are set to SMALL. In this case, all bass frequencies are sent to the subwoofer.

2. If you selected Speaker B, ZONE 2 or Front Bi-Amp (in Surround back speaker setting on page 124) you can’t adjust the surround back setting.

3. If you have a subwoofer and like lots of bass, it may seem logical to select LARGE for your front speakers and PLUS for the subwoofer. This may not, however, yield the best bass results. Depending on the speaker placement of your room you may actually experience a decrease in the amount of bass due low frequency cancellations. In this case, try changing the position or direction of speakers. If you can’t get good results, listen to the bass response with it set to PLUS and YES or the front speakers set to LARGE and SMALL alternatively and let your ears judge which sounds best. If you’re having problems, the easiest option is to route all the bass sounds to the subwoofer by selecting SMALL for the front speakers.

4. This setting decides the cutoff between bass sounds playing back from the speakers selected as LARGE or the subwoofer, and bass sounds playing back from those selected as SMALL. It also decides where the cutoff will be for bass sounds in the LFE channel.

• If you’re using a THX speaker setup, confirm that the crossover frequency is set to 80Hz.
3 Confirm your selected setup option.
The test tones will start after you press ENTER.

4 Adjust the level of each channel using ↑/↓.
If you selected MANUAL, use ↑/↓ to switch speakers.
The AUTO setup will output test tones in the order shown on-screen:

Adjust the level of each speaker as the test tone is emitted.

5 When you're finished, press RETURN.
You will return to the Manual SP Setup menu.

Tip
• You can change the channel levels by setting the remote control to the receiver operation mode, then pressing CH LEVEL, and then using ↑/↓ on the remote control.

Speaker Distance
For good sound depth and separation from your system, you need to specify the distance of your speakers from the listening position. The receiver can then add the proper delay needed for effective surround sound.

1 Select 'Speaker Distance' from the Manual SP Setup menu.

2 Choose the X-Curve setting you want.
Use ↑/↓ to adjust the setting. The X-Curve is expressed as a downwards slope in decibels per octave, starting at 2 kHz. The sound becomes less bright as the slope increases (to a maximum of −3.0 dB/oct).

3 When you're finished, press RETURN.

X-Curve
Most soundtracks mixed for cinema sound too bright when played back in large rooms. The X-Curve setting acts as a kind of re-equalization for home theater listening, and restores proper tonal balance of movie soundtracks.

1 Select 'X-Curve' from the Manual SP Setup menu.

2 Adjust the distance of each speaker using ↑/↓.
You can adjust the distance of each speaker in 1/2 inch increments.

3 Confirm your selected setup option.
The test tones will start after you press ENTER.

3 Since the principal is the same, X-Curve isn't applied when you're using any of the Home THX modes (see Using the Home THX modes on page 63).
The system and the other setup

THX Audio Setting
This menu allows the user to adjust various THX features including Loudness Plus, SB Speaker Position, THX Ultra2/Select2\(^1\) Subwoofer (on/off), and Boundary Gain Control. Please see page 145 for a details regarding these THX features.

1 Select ‘THX Audio Setting’ from the Manual SP setup menu.

2 Select either ON or OFF for THX Loudness Plus setting.

3 Specify the distance of your surround back speakers from each other.

- **0–1 ft** – Surround back speakers within 1 foot apart.
- **>1–4 ft** – Surround back speakers between 1 and 4 feet apart.
- **4 ft<** – Surround back speakers more than 4 feet apart (default).

4 Specify whether your subwoofer is THX Ultra2/Select2\(^1\) certified or not.

If your subwoofer isn’t THX Ultra2/Select2\(^1\) certified, but you still want to switch boundary gain compensation on, select **YES** here, but the effect might not work properly.

5 Select either ON or OFF for Boundary Gain Compensation (BGC) setting.

6 When you’re finished, press RETURN. You will return to the Manual SP Setup menu.

**Note**
1 Ultra2 for the SC-27, Select2 for the SC-25.
The Other Setup menu

The Other Setup menu is where you can make customized settings to reflect how you are using the receiver.

1. Set the remote control to the receiver operation mode, then press HOME MENU.
   A Graphical User Interface (GUI) screen appears on your TV. Use 
   and ENTER to navigate through the screens and select menu items. Press RETURN to confirm and exit the current menu.

2. Select ‘System Setup’ from the HOME MENU.

3. Select ‘Other Setup’, then press ENTER.

4. Select the setting you want to adjust.
   If you are doing this for the first time, you may want to adjust these settings in order:
   - KURO LINK Setup – Synchronizes this receiver with your Pioneer component supporting KURO LINK (see KURO LINK Setup on page 85).
   - Multi Ch In Setup – Specifies the optional settings for a multi-channel input (page 128).
   - ZONE Audio Setup – Specifies the volume setting for a MULTI-ZONE setup (page 129).
   - Power ON Level Setup – Specifies the volume level set when the power is turned on (page 129).
   - Volume Limit Setup – Limits the maximum volume (page 129).
   - Remote Control Mode Setup – Sets this receiver’s remote control mode (page 130).
   - Flicker Reduction – Adjusts the way the GUI screen looks (page 130).

5. Make the adjustments necessary for each setting, pressing RETURN to confirm after each screen.

Multi Channel Input Setup

You can adjust the level of the subwoofer for a multi-channel input. Also, when the multi-channel input is selected as an input function, you can display the video images of other input functions. In the Multi Channel Input Setup, you can assign a video input to the multi-channel input.

1. Select ‘Multi Ch In Setup’ from the Other Setup menu.

2. Select the ‘SW Input Gain’ setting you want.
   - 0dB – Outputs sound of the subwoofer at the level originally recorded on the source.
   - +10dB – Outputs sound of the subwoofer at the level increased by 10 dB.

3. Select the ‘Video Input’ setting you want.
   When the multi-channel input is selected as an input function, you can display the video images of other input functions. The video input can be selected from the following: DVD, TV/SAT, DVR, VIDEO 1, VIDEO 2, OFF.

4. When you’re finished, press RETURN.
   You will return to the Other Setup menu.
The system and the other setup

ZONE Audio Setup
If you’ve made MULTI-ZONE connections (see Using the MULTI-ZONE controls on page 91), you may need to specify your volume setting.

1 Select ‘ZONE Audio Setup’ from the Other Setup menu.

2 Select the volume level setting of ZONE 2\(^1\) and ZONE 3.
   - Variable – Use this setting if you’ve connected a power amplifier in the sub room (this receiver is simply being used as a pre-amp) and you will be using this receiver’s controls to adjust the volume.
   - Fixed – Use this setting if you’ve connected a fully integrated amplifier (such as another Pioneer VSX receiver) in the sub room and want to use that receiver’s volume controls.

With the Fixed setting, the source is sent from this receiver at maximum volume, so make sure the volume is quite low in the sub zone at first, and then experiment to find the correct level.

3 When you’re finished, press RETURN.
You will return to the Other Setup menu.

Power ON Level Setup
The volume can be set so that it is always set to the same level when the receiver’s power is turned on.

1 Select ‘Power ON Level Setup’ from the Other Setup menu.

2 Select the Power ON Level setting you want.
   - LAST – When the power is turned on, the volume is set to the same level as when the power was last turned off.
   - “~” – When the power is turned on, the volume is set to minimum level.
   - –80.0dB to +12.0dB – Specify the volume to be set when the power is turned, in steps of 0.5 dB.

It is not possible to set a volume level greater than the value specified at Volume Limit Setup.

3 When you’re finished, press RETURN.
You will return to the Other Setup menu.

Volume Limit Setup
Use this function to limit the maximum volume. The volume cannot be increased above the level set here, even by operating MASTER VOLUME button (or the dial on the front panel).

1 Select ‘Volume Limit Setup’ from the Other Setup menu.

2 Select the Volume Limit setting you want.
   - OFF – The maximum volume is not limited.
   - –20.0dB—10.0dB:0.0dB – The maximum volume is limited to the value set here.

3 When you’re finished, press RETURN.
You will return to the Other Setup menu.

\(^1\) If you selected ZONE 2 in the Surround back speaker setting on page 124, you won’t be able to change the volume level.
Remote Control Mode Setup

- Default setting: 1

This sets this receiver’s remote control mode to prevent erroneous operation when multiple units of the receiver are being used.

1 Select 'Remote Control Mode Setup' from the Other Setup menu.

2 Select the Remote Control Mode setting you want.

3 Select “OK” to change the remote control mode.

4 Follow the instructions on the screen to change the remote control’s setting.

5 When you’re finished, press RETURN.

You will return to the Other Setup menu.

Flicker Reduction Setup

- Default setting: 4

The GUI screen’s resolution can be increased. If you feel the GUI screen is hard to see, try changing this setting. Note that the resolution in this setting only affects the GUI screen; it has no influence on the video output.

1 Select ‘Flicker Reduction Setup’ from the Other Setup menu.

2 Select the Flicker Reduction setting you want.

3 When you’re finished, press RETURN.

You will return to the Other Setup menu.

Note

1 If you change this receiver’s setting, also change the setting on the remote control.
Chapter 13:
Additional information

Speaker Setting Guide
In order to achieve an even better surround effect, it is important to accurately position the speakers and make their volume and tone characteristics uniform so as to finely focus the multi-channel sound.

The three major elements in positioning the speakers are **distance**, **angle**, and **orientation** (the direction in which the speakers are pointing).

**Distance**: The distance of all the speakers should be equal.

**Angle**: The speakers should be horizontally symmetrical.

**Orientation**: The orientation should be horizontally symmetrical.

In most homes, however, it is not possible to achieve this environment. For the distance, on this receiver it is possible to automatically correct the speaker distance electrically to a precision of \( \frac{1}{2} \) inch using the Auto MCACC Setup function (page 46) and to adjust precisely using the procedure described at Precision Distance (page 117). For the volume and sound quality as well, accurate sound field correction using the equalizer and speaker phase characteristic correction using the Full Band Phase Control function (page 68) together make it possible to achieve the ideal listening environment.

**Step 1: Speaker layout and distance adjustment**
Use speaker stands or the like to make sure the speakers are steady, and leave at least 10 cm (4 inches) from the surrounding walls. Position the speakers attentively so that the speakers on the left and right are at equal angles from the listening position (center of the adjustments). (We recommend using cords, etc., when adjusting the layout.) Ideally all the speakers should be equidistant from the listening position.

**Tip**
- If the speakers cannot be set at equal distances (on a circle), use the Auto MCACC Setup speaker distance correction and Fine Speaker Distance (or Precision Distance – SC-27 only) functions to make them equalize the distance artificially.

**Step 2: Adjusting the speaker height**
Adjust the heights (angles) of the different speakers. Adjust so that the front speaker units reproducing mid- and high frequencies is roughly at the height of the ears. If the center speaker cannot be set at the same height as the front speakers, adjust its angle of elevation to point it to the listening position.

Set surround speaker 1 so that it is not under the height of the ears.

**Step 3: Adjusting the speaker orientation**
If the left and right speakers are not pointing in the same direction, the tone will not be the same on the right and left, and as a result the sound field will not be reproduced properly. However, if all the speakers are pointed towards the listening position, the sound field will seem cramped. Testing by the Pioneer Multi-channel Research Group has shown that a good sense of sound positioning can be achieved by pointing all the speakers towards an area 30 cm (12 inches) to 80 cm (31 inches) behind the listening position (between the surround speakers and the listening position).

However, the sense of sound positioning can differ according to the conditions in the room and the speakers being used. In smaller environments in particular (when the front speakers are close to the listening position), with this method the speakers will be pointed too inward. We suggest you use this example of installation as reference when trying out different installation methods.

**Step 4: Positioning and adjusting the subwoofer**
Placing the subwoofer between the center and front speakers makes even music sources sound more natural (if there is only one subwoofer, it doesn’t matter if it is placed on the left or right side). The low bass sound output from the subwoofer is not directional and there is no need to adjust the height. Normally the subwoofer is placed on the floor. Put it in a position at which it will not cancel out the bass sound output from the other speakers. Also note that placing it near a wall may result in sympathetic vibrations with the building that could excessively amplify the bass sound.

If the subwoofer must be installed near a wall, place it at an angle so that it is not parallel to the wall surface. This can help reduce any sympathetic vibrations, but depending on the shape of the room this could result in standing waves. However, even if standing waves are generated, their influence on the sound quality can be prevented using the Auto MCACC’s standing wave control function (page 119).

**Step 5: Default settings with the Auto MCACC Setup (auto sound field correction) function**
It is more effective to perform the Auto MCACC Setup (page 46) and Precision Distance (SC-27 only) on page 117) procedure once the adjustments described above have been completed.
Tip

- The distance to the subwoofer may be slightly larger than the distance actually measured with a tape measure, etc. This is because this distance is corrected for electric delay, and is not a problem.

Positional relationship between speakers and monitor

Position of front speakers and monitor

The front speakers should be as equidistant as possible to the monitor.

Position of center speaker and monitor

Since mostly dialogs are output from the center speaker, keeping the center speaker as close as possible to the screen makes the overall sound more natural. For TVs using Braun tubes, however, when installing the center speaker on the floor, adjust its angle of elevation to point it towards the listening position.

If the center speaker is not of the shielded type, install it away from the TV.

When installing the center speaker on top of the monitor, place it facing slightly downwards towards the listening position.

Troubleshooting

Incorrect operations are often mistaken for trouble and malfunctions. If you think that there is something wrong with this component, check the points below. Sometimes the trouble may lie in another component. Investigate the other components and electrical appliances being used. If the trouble cannot be rectified even after exercising the checks listed below, ask your nearest Pioneer authorized independent service company to carry out repair work.

Note

- If the unit does not operate normally due to external effects such as static electricity disconnect the power plug from the outlet and insert again to return to normal operating conditions.

Power

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The power does not turn on.</td>
<td>• Make sure that the power cord is plugged in to an active power outlet. • Try disconnecting from the power outlet, then plugging back in.</td>
</tr>
<tr>
<td>Power cannot be turned off. (ZONE 2 ON or ZONE 3 ON is displayed.)</td>
<td>• Set the remote control's MULTI-ZONE operation selector switch to ZONE 2 or ZONE 3, then press RECEIVER to switch the sub zone off.</td>
</tr>
<tr>
<td>The receiver suddenly switches off or the PHASE CONTROL indicator blinks.</td>
<td>• Check that there are no loose strands of speaker wire touching the rear panel or another set of wires. If so, re-attach the speaker wires, making sure there are no stray strands. • The receiver may have a serious problem. Disconnect from the power and call a Pioneer authorized independent service company.</td>
</tr>
<tr>
<td>During loud playback the power suddenly switches off.</td>
<td>• Turn down the volume. • Lower the 63 Hz and 125 Hz equalizer levels in the Manual MCACC setup on page 112. • Switch on the digital safety feature. While holding down ENTER on the front panel, press STANDBY/ON to set this receiver to the standby mode. Use 1/2 to select D.SAFETY, then use 1/2 to select 1 or 2 (select D.SAFETY OFF to deactivate this feature). If the power switches off even with 2 switched on, turn down the volume. With 1 or 2 on, some features may be unavailable.</td>
</tr>
</tbody>
</table>
### Additional information

#### Symptom | Remedy
--- | ---
**The unit does not respond when the buttons are pressed.**
- Try switching the receiver off, then back on again.
- Try disconnecting the power cord, then connect again.

**AMP ERR** blinks in the display, then the power automatically switches off. The power indicator blinks and the power does not turn on.
- Try tuning on the power after 1 minute.

**AMP ERR** blinks in the display, then the power automatically switches off. The **ADVANCED MCACC** blinks and the power does not turn on.
- The receiver may have a serious problem. Do not try switching the receiver on. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

The **PQLS** indicator flashes and power turns off. The **FAN STOP** indicator is displayed.
- There is a problem with the receiver’s fan. Try turning on the power. If the same thing happens, the receiver is damaged. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

The **ADVANCED MCACC** indicator flashes and power turns off.
- There is a problem with the receiver’s power unit. The receiver may have a serious problem. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

**AMP OVERHEAT** (or **OVERHEAT**) and the power indicator flash and the power turns off.
- Allow the unit to cool down in a well-ventilated place before switching back on.
- Wait at least 1 minute, then try turning the power on again.

The Receiver suddenly power off or the blue indicator at the center of the receiver flashes.
- The power unit is damaged. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

Display blinks **12V TRG ERR**.
- An error has arisen in the 12 V trigger jacks. Reconnect accurately then turn the power back on.

#### No sound

#### Symptom | Remedy
--- | ---
**No sound is output when an input function is selected.**
- Check the volume, mute setting (press **MUTE**) and speaker setting (press **SPEAKERS**).
- Make sure the correct input function is selected.
- Check that the MCACC setup microphone is disconnected.
- Make sure the correct input signal is selected (press **SIGNAL SEL**). Note that when **PCM** is selected, you won’t be able to hear any other signal format.
- Check that the source component is connected properly (see Connecting your equipment on page 20).
- Check that the speakers are connected properly (see Connecting the speakers on page 24).

**No sound output from the front speakers.**
- Check that the Stereo listening mode or the Front Stage Surround Advance mode isn’t selected; select one of the surround listening modes (see Listening in surround sound on page 62).
- Check that the surround/center speakers are not set to **NO** (see Speaker Setting on page 124).
- Check the channel level settings (see Channel Level on page 125).
- Check the speaker connections (see Connecting the speakers on page 24).

**No sound from the surround or center speakers.**
- Check that the surround back channel processing is set to **SBch ON** (see Using surround back channel processing on page 66).
- If the source does not have 6.1 playback channels, make sure that surround back channel processing is set to **SBch Auto** and a surround mode is selected (see Listening in surround sound on page 62).
- Check the speaker connections (see Connecting the speakers on page 24). If only one surround back speaker is connected, make sure it’s connected to the left channel speaker terminal.

#### Other audio problems

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>No sound from subwoofer.</td>
<td>- Check that the subwoofer is connected properly, switched on and the volume turned up.</td>
</tr>
<tr>
<td></td>
<td>- If your subwoofer has a sleep function, make sure it is switched off.</td>
</tr>
<tr>
<td></td>
<td>- Make sure that the Subwoofer setting is YES or PLUS (see Speaker Setting on page 124).</td>
</tr>
<tr>
<td></td>
<td>- The crossover frequency may be set too low; try setting it higher to match the characteristics of your other speakers (see Speaker Setting on page 124).</td>
</tr>
<tr>
<td></td>
<td>- If there is very little low frequency information in the source material, change your speaker settings to Front: SMALL / Subwoofer: YES, or Front: LARGE / Subwoofer: PLUS (see Speaker Setting on page 124).</td>
</tr>
<tr>
<td></td>
<td>- Check that the LFE channel is not set to OFF, or a very quiet setting (see Setting the Audio options on page 88).</td>
</tr>
<tr>
<td></td>
<td>- Check the speaker level settings (see Channel Level on page 125).</td>
</tr>
<tr>
<td>No sound from one speaker.</td>
<td>- Check the speaker connection (see Connecting the speakers on page 24).</td>
</tr>
<tr>
<td></td>
<td>- Check the speaker level settings (see Channel Level on page 125).</td>
</tr>
<tr>
<td></td>
<td>- Check that the speaker hasn’t been set to NO (see Speaker Setting on page 124).</td>
</tr>
<tr>
<td></td>
<td>- The channel may not be recorded in the source. By using one of the advanced effect listening mode, you may be able to create the missing channel (see Listening in surround sound on page 62).</td>
</tr>
<tr>
<td>Sound is produced from analog components, but not from digital ones</td>
<td>- Check that the input signal type is set to DIGITAL (see Choosing the input signal on page 68).</td>
</tr>
<tr>
<td></td>
<td>- Make sure that the digital input is assigned correctly for the input jack the component is connected to (see The Input Setup menu on page 48).</td>
</tr>
<tr>
<td></td>
<td>- Check the digital output settings on the source component.</td>
</tr>
<tr>
<td></td>
<td>- If the source component has a digital volume control, make sure this is not turned down.</td>
</tr>
<tr>
<td></td>
<td>- Make sure that the multichannel analog inputs are not selected. Select any other input function.</td>
</tr>
<tr>
<td>No sound is output or a noise is output when Dolby Digital/DTS software is played back.</td>
<td>- Check that your DVD player is compatible with Dolby Digital/DTS discs.</td>
</tr>
<tr>
<td></td>
<td>- Check the digital output settings of your DVD player. Make sure that the DTS signal output is set to On.</td>
</tr>
<tr>
<td></td>
<td>- If the source component has a digital volume control, make sure this is not turned down.</td>
</tr>
<tr>
<td>No sound when using the HOME MENU.</td>
<td>- If the HDMI input function is selected, sound is muted until exiting the HOME MENU.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| Broadcast stations cannot be selected automatically, or there is considerable noise in radio broadcasts. | For FM broadcasts:  
- Fully extend the FM wire antenna, adjust the position for best reception and secure to a wall, etc.  
- Use an outdoor antenna for better reception (see page 37).  
For AM broadcasts:  
- Adjust the position and direction of the AM antenna.  
- Use an outdoor antenna for better reception (see page 37).  
|                                                                       | Noise may be caused by interference from other equipment, such as a fluorescent light, motor, etc. Switch off or move the other equipment, or move the AM antenna. |
| A multichannel DVD source appears to be downmixed to 2 channels during playback. | - Make sure that the multichannel analog inputs are selected (see Selecting the multichannel analog inputs on page 51).              |
| Noise is output when scanning a DTS CD.                                | - This is not a malfunction of the receiver. The scan function of your player alters the digital information, making it unreadable, resulting in noise being output. Lower the volume when scanning. |
| When playing a DTS format LD there is audible noise on the soundtrack. | - Make sure that the input signal type is set to DIGITAL (see Choosing the input signal on page 68).                                    |
| Can’t record audio.                                                   | - You can only make a digital recording from a digital source, and an analog recording from an analog source.                        |
|                                                                       | - For digital sources, make sure that what you’re recording isn’t copy protected.                                                    |
|                                                                       | - Check that the OUT jacks are properly connected to the recorders input jacks (see Connecting other audio components on page 35).     |
| Subwoofer output is very low.                                         | - To route more signal to the subwoofer, set it to PLUS or set the front speakers to SMALL (see Speaker Setting on page 124).         |
### Additional information

#### Symptom

**Everything seems to be set up correctly, but the playback sound is odd.**

- The speakers may be out of phase. Check that the positive/negative speaker terminals on the receiver are matched with the corresponding terminals on the speakers (see Connecting the speakers on page 24).

**The PHASE CONTROL feature doesn’t seem to have an audible effect.**

- If applicable, check that the lowpass filter switch on your subwoofer is off, or the lowpass cutoff is set to the highest frequency setting. If there is a PHASE setting on your subwoofer, set it to 0º (or depending on the subwoofer, the setting where you think it has the best overall effect on the sound).
- Make sure the speaker distance setting is correct for all speakers (see Speaker Distance on page 126).

**Noise or hum can be heard even when there is no sound being input.**

- Check that personal computers or other digital components connected to the same power source are not causing interference.

**There seems to be a time lag between the speakers and the output of the subwoofer.**

- See Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46 to set up your system again using MCACC (this will automatically compensate for a delay in the subwoofer output).

**The maximum volume available (shown in the front panel display) is lower than the +12dB maximum.**

- Check that the Volume Limit is set to OFF (see Volume Limit Setup on page 129).

**Some of the input functions cannot be selected using the INPUT SELECTOR on the front dial or INPUT SELECT on remote control.**

- Make sure that the function is set to ON at the Input Skip function on the Input Setup menu (page 48).
- Make sure that HDMI Input on the Input Setup menu is set to OFF (page 48).

#### Video

**No image is output when an input is selected.**

- Check the video connections of the source component (see page 33).
- For HDMI, or when digital video conversion is set to OFF and a TV and another component are connected with different cords (in Setting the Video options on page 90), you must connect your TV to this receiver using the same type of video cable as you used to connect your video component.
- Make sure the input assignment is correct for components connected using component video, HDMI or S-Video cables (see The Input Setup menu on page 48).
- Check the video output settings of the source component.
- Check that the video input you selected on your TV is correct.
- Some components (such as video game units) have resolutions that may not be converted. If adjusting this receiver’s Resolution setting (in Setting the Video options on page 90) and/or the resolution settings on your component or display doesn’t work, try switching Digital Video Conversion (in Setting the Video options on page 90) OFF.

**Can’t record video.**

- Check that the source is not copy-protected.
- The video converter is not available when making recordings. Check that the same type of video cable is used for connecting both the recorder and the video source (the one you want to record) to this receiver.

**Noisy, intermittent, or distorted picture.**

- Sometimes a video deck may output a noisy video signal (during scanning, for example), or the video quality may just be poor (with some video game units, for example). The picture quality may also depend on the settings, etc. of your display device. Switch off the video converter and reconnect the source and display device using the same type of connection (component, S-Video or composite), then start playback again.

**Video signals are not output from the component terminal.**

- When a monitor only compatible with resolutions of 480i is connected to the component terminal and another monitor is connected to the HDMI terminal, the video signals may not be output to the monitor connected to the component terminal. If this happens, do the following:
  - Turn off the power of the monitor connected to the HDMI terminal.
  - Set RES on the VIDEO PARAMETER menu to PURE (page 90).
## Additional information

### Settings

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| The Auto MCACC Setup continually shows an error.                       | • The ambient noise level may be too high. Keep the noise level in the room as low as possible (see Problems when using the Auto MCACC Setup on page 48). If the noise level cannot be kept low enough, you will have to set up the surround sound manually (page 124).  
  • When using only one surround back speaker, connect it to the **SURROUND BACK L (Single)** terminals.  
  • To use a 5.1-channel speaker set, use the surround speakers for the surround channel, not the surround back channel.  
  • Make sure there are no obstacles between the speakers and the microphone.  
  • If **Reverse Phase** is displayed, try the following:  
    – The speaker’s wiring (+ and –) may be inverted. Check the speaker connections.  
    – If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the phase (dipole speakers, reflective speakers, etc.), it may not be possible to properly identify the polarity.  
    – Depending on the type of speakers and their installation conditions, **Reverse Phase** may be displayed even if the speakers are properly connected. If this happens, select GO NEXT and continue. |
| After using the Auto MCACC Setup, the speaker size setting is incorrect. | • There may have been some low frequency noise in the room from an air-conditioner, motor, etc. Switch off all other appliances in the room and use Auto MCACC Setup again.  
  • Depending on a number of factors (room size, speaker placement, etc.) this may occur in some cases. Change the speaker setting manually in Speaker Setting on page 124, and use the **ALL (Keep SP System)** option for the Auto MCACC menu in Automatic MCACC (Expert) on page 110 if this is a recurring problem. |
| Gauge (value) does not increase with the Precision Distance adjustment.  | • Check that the speakers are all in phase (make sure the positive (+) and negative (–) terminals are matched up properly).  
  • Perform the Full Auto MCACC procedure before the Precision Distance adjustment (see Automatically setting up for surround sound (Auto MCACC & Full Band Phase Control) on page 46).  
  • Place the microphone accurately in the same position as when the Full Auto MCACC procedure was performed.  
  • Do not move the speaker used as the reference point. Also, adjust in order, starting from the front right speaker.  
  • When adjusting the speaker positions, do not move the speakers much; only move them about 1 inch towards or away from the microphone.  
  • If you forget exactly where the microphone should be positioned or if there are problems after the procedure has been performed repeatedly, re-calibrate the distance using the Full Auto MCACC procedure, then without moving the microphone redo the Precision Distance adjustment. |
| Can’t adjust the Fine Speaker Distance setting (page 114) properly.     | • Check that the speakers are all in phase (make sure the positive (+) and negative (–) terminals are matched up properly). |
| The display shows **KEY LOCK ON** when you try to make settings.        | • With the receiver in standby, press **STANDBY/ON** while holding down **SPEAKERS** to disable the key lock. |
| Most recent settings have been erased.                                 | • The power cord was disconnected from the wall while adjusting this setting.  
  • Settings are only stored if all the zones are turned off. Turn off all the zones before unplugging the power cord. |
| The various system settings are not stored.                            | • After all the zones have been turned off, make sure the blue **STANDBY/ON** light has gone out before unplugging. |
Professional Calibration EQ graphical output

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| The EQ response displayed in the graphical output following calibration does not appear entirely flat. | • There are cases where the graph does not appear flat (even when selecting ALL CH ADJ in the Auto MCACC Setup) due to adjustments made to compensate for room characteristics to achieve optimal sound.  
• Areas of the graph may appear identical (before and after) when there is little or no adjustment needed.  
• The graph may appear to have shifted vertically when comparing before and after measurements. |
| EQ adjustments made using the Manual MCACC setup on page 112 do not appear to change the graphical output. | • Despite level adjustments being made, the filters used for analysis may not display these adjustments in the graphical output. However, these adjustments are taken into account by the filters dedicated to overall system calibration. |
| Lower frequency response curves do not seem to have been calibrated for SMALL speakers. | • Low frequencies used in bass management (the subwoofer channel) will not change for speakers that have been specified as SMALL in the configuration, or do not output these frequencies.  
• Calibration is performed, but due to your speakers’ low frequency limitations, no measurable sound is output for display. |

Display

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The display is dark or off.</td>
<td>• Press DIMMER repeatedly to select a different brightness.</td>
</tr>
<tr>
<td>After making an adjustment the display goes off,</td>
<td>• Press DIMMER repeatedly to select a different brightness.</td>
</tr>
</tbody>
</table>
| You can’t get DIGITAL to display when using SIGNAL SEL.                | • Check the digital connections and make sure that the digital inputs are assigned correctly (see The Input Setup menu on page 48).  
• If the multichannel analog inputs are selected, select a different input function. |
| @ DIGITAL or DTS does not light when playing Dolby/DTS software.       | • These indicators do not light if playback is paused.                  
• Check the playback (especially the digital output) settings of the source component. |
| When playing Dolby Digital or DTS sources, the receiver’s format indicators do not light. | • Check that the player is connected using a digital connection.  
• Make sure that the receiver is set to AUTO or DIGITAL (see Choosing the input signal on page 68).  
• Check that the player isn’t set up so that Dolby Digital and DTS sources are converted to PCM.  
• Ensure that if there are several audio tracks on the disc, the Dolby Digital or DTS is selected. |
| When playing certain discs, none of the receiver’s format indicators light. | • The disc may not contain 5.1/6.1 channel material. Check the disc packaging for more on what audio tracks are recorded on the disc. |
| When playing a disc with the listening mode set to Auto Surround or ALC, @ PL II or Neo:6 appear on the receiver. | • Make sure that the receiver is set to AUTO or DIGITAL (see Choosing the input signal on page 68).  
• If a two channel soundtrack is currently playing (including Dolby Surround encoded), then this is not a malfunction. Check the disc packaging for details about the audio tracks available. |
| During playback of a Surround EX or DTS-ES source on the SBch AUTO setting, EX or ES does not appear, or the signal is not properly processed. | • The source may be Dolby Surround EX/DTS-ES software, but it has no flag to indicate it is 6.1 compatible. Set to SBch ON (see Using surround back channel processing on page 68), then switch to the THX Surround EX or Standard EX listening mode (see Listening in surround sound on page 62). |
| During playback of DVD-Audio, the display shows PCM.                   | • This will occur when playing DVD-Audio material over the HDMI connection. This is not a malfunction.  
• See the Power section (page 132). |
| The power turns off automatically and some indicator flashes, or some indicator flashes and the power does not turn on. |  
• See the Power section (page 132). |
## Additional information

### Remote control

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cannot be remote controlled.</td>
<td>• SC-27 – Set the remote control mode properly (see <em>Operating multiple receivers</em> on page 96).</td>
</tr>
<tr>
<td></td>
<td>• SC-25 – Set a 5-digit preset code corresponding to the receiver to be operated in the remote control (see <em>Operating multiple receivers</em> on page 103).</td>
</tr>
<tr>
<td></td>
<td>• Check whether the receiver’s remote control mode is properly set (see <em>Remote Control Mode Setup</em> on page 130).</td>
</tr>
<tr>
<td></td>
<td>• Try replacing the batteries in the remote control (see <em>Loading the batteries</em> on page 11).</td>
</tr>
<tr>
<td></td>
<td>• Be sure to operate within 7 m (23 feet) and a 30º angle of the remote sensor on the front panel (see <em>Operating range of remote control unit</em> on page 11).</td>
</tr>
<tr>
<td></td>
<td>• Check that there are no obstacles between the receiver and the remote control.</td>
</tr>
<tr>
<td></td>
<td>• Make sure that there is no fluorescent or other strong light shining on to the remote sensor.</td>
</tr>
<tr>
<td></td>
<td>• Check the connections of the CONTROL IN jack (see <em>Operating other Pioneer components with this unit’s sensor</em> on page 40).</td>
</tr>
<tr>
<td>Other components can’t be operated</td>
<td>• If the battery ran down, the preset codes may have been cleared. Re-enter the preset codes.</td>
</tr>
<tr>
<td>with the system remote.</td>
<td>• The preset code may be incorrect. Redo the procedure for entering preset codes.</td>
</tr>
</tbody>

<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The HDMI indicator blinks continuously.</td>
<td>• Check all the points below.</td>
</tr>
<tr>
<td>No picture or sound.</td>
<td>• This receiver is HDCP-compatible. Check that the components you are connecting are also HDCP-compatible. If they are not, please connect them using the component, S-Video or composite video jacks.</td>
</tr>
<tr>
<td></td>
<td>• Depending on the connected source component, it’s possible that it will not work with this receiver (even if it is HDCP-compatible). In this case, connect using the component, S-Video or composite video jacks between source and receiver.</td>
</tr>
<tr>
<td></td>
<td>• If the problem still persists when connecting your HDMI component directly to your monitor, please consult the component or monitor manual or contact the manufacturer for support.</td>
</tr>
<tr>
<td></td>
<td>• If video images do not appear on your TV or flat panel TV, try adjusting the resolution, Deep Color or other setting for your component.</td>
</tr>
<tr>
<td></td>
<td>• While analog video signals are being output over HDMI, use a separate connection for audio output.</td>
</tr>
<tr>
<td></td>
<td>• When this receiver reproduces MULTI CH IN audio sources with the HDMI setting set to THROUGH, you cannot hear audio output from all channels. In this case, make a digital or analog audio connection.</td>
</tr>
<tr>
<td></td>
<td>• To output signals in Deep Color, use an HDMI cable (High Speed HDMI™ Cable) to connect this receiver to a component or TV with the Deep Color feature.</td>
</tr>
<tr>
<td>No picture.</td>
<td>• Try changing the Resolution setting (in <em>Setting the Video options</em> on page 90).</td>
</tr>
<tr>
<td></td>
<td>• Set the HDMI output setting to the connected HDMI OUT terminal (in <em>Switching the HDMI output</em> on page 94).</td>
</tr>
<tr>
<td>No sound, or sound suddenly ceases.</td>
<td>• Check that the HDMI AV setting is set to AMP/THROUGH.</td>
</tr>
<tr>
<td></td>
<td>• If the component is a DVI device, use a separate connection for the audio.</td>
</tr>
<tr>
<td></td>
<td>• If analog video is being output over HDMI, please use a separate connection for the audio.</td>
</tr>
<tr>
<td></td>
<td>• Check the audio output settings of the source component.</td>
</tr>
<tr>
<td>Noisy or distorted picture.</td>
<td>• Sometimes a video deck may output a noisy video signal (during scanning, for example), or the video quality may just be poor (with some video game units, for example). The picture quality may also depend on the settings, etc. of your display device. Switch off the video converter and reconnect the source and display device using the same type of connection (component, S-Video or composite), then start playback again.</td>
</tr>
<tr>
<td></td>
<td>• If the problem still persists when connecting your HDMI component directly to your monitor, please consult the component or monitor manual or contact the manufacturer for support.</td>
</tr>
<tr>
<td>HDCP ERROR shows in the display.</td>
<td>• Check whether or not the connected component is compatible with HDCP. If it is not compatible with HDCP, reconnect the source device using a different type of connection (component, S-Video or composite). Some components that are compatible with HDCP still cause this message to be displayed, but so long as there is no problem with displaying video, this is not a malfunction.</td>
</tr>
</tbody>
</table>
**Additional information**

**Symptom**

Amp-linked operation not possible using KURO LINK function.

**Remedy**

- Check the HDMI connections.
- The cable may be damaged.
- Select ON for the KURO LINK setting (see KURO LINK Setup on page 85).
- Turn the TV’s power on before turning on this receiver’s power.
- Set the TV side KURO LINK setting to ON.
- Connect the TV to the HDMI OUT 1 terminal and set the HDMI output to HDMI OUT 1. Then turn on first the TV’s power, then this receiver’s power.

**Important information regarding the HDMI connection**

There are cases where you may not be able to route HDMI signals through this receiver (this depends on the HDMI-equipped component you are connecting—check with the manufacturer for HDMI compatibility information).

If you aren’t receiving HDMI signals properly through this receiver (from your component), please try one of the following configurations when connecting up.

**Configuration A**

Use component video cables to connect the video output of your HDMI-equipped component to the receiver’s component video input. The receiver can then convert the analog component video signal to a digital HDMI signal for transmission to the display. For this configuration, use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections.

**Note**

- The picture quality will change slightly during conversion.

**Configuration B**

Connect your HDMI-equipped component directly to the display using an HDMI cable. Then use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections. Set the display volume to minimum when using this configuration.

If the problem is not solved after the troubleshooting above, if the screen freezes unexpectedly or if the buttons on the remote control or front panel stop working completely, do the following:

- Press `STANDBY/ON` on the front panel to turn off the power, then turn the power back on.
- If the power cannot be turned off, press and hold `STANDBY/ON` on the front panel for over 10 seconds. The power will turn off. (In this case, the various settings made on the receiver may be cleared.)

### Surround sound formats

Below is a brief description of the main surround sound formats you’ll find on DVDs, satellite, cable and terrestrial broadcasts, and video cassettes.

**Dolby**

The Dolby technologies are explained below. See www.dolby.com for more detailed information.

**Dolby Digital**

Dolby Digital is a multichannel digital audio coding system widely used in cinemas, and in the home for DVD and digital broadcast soundtracks. It can deliver up to six discrete audio channels, comprising five full range channels and a special LFE (low frequency effects) channel used mainly for deep, rumbling sound effects; hence the term “5.1-channel” Dolby Digital.

In addition to the format features above, Dolby Digital decoders offer downmixing for compatibility with mono, stereo and Dolby Pro Logic audio from a number of bit rates and channels. Another feature, called Dialog Normalization, attenuates programs based on the average level of dialog in a program relative to its peak level (also known as Diagnorm) in order to achieve uniform playback level.

**Dolby Pro Logic IIx and Dolby Surround**

Dolby Pro Logic IIx is an improved version of the Dolby Pro Logic II (and Dolby Pro Logic) decoding system. Using the innovative “steering logic” circuit, this system extracts surround sound from sources as follows:

- **Dolby Pro Logic** – 4.1 channel sound (mono surround) from any stereo source
- **Dolby Pro Logic II** – 5.1 channel sound (stereo surround) from any stereo source
- **Dolby Pro Logic IIx** – 6.1 or 7.1 channel sound (stereo surround and surround back) from two channel or 5.1 (and 6.1) channel sources

With two channel sources, the “.1” subwoofer channel is generated by bass management in the receiver.

Dolby Surround is an encoding system which embeds surround sound information within a stereo soundtrack, which a Dolby Pro Logic decoder can then use for enhanced surround listening with greater sound detail.

**Dolby Digital Surround EX**

Dolby Digital Surround EX (the EX stands for EXtended) is an extension of Dolby Digital encoding whereby a surround back channel is matrixed into the surround left/right channels for 6.1 channel playback. This allows for compatibility with Dolby Digital 5.1 channel decoding, as well as for decoding using Dolby Digital EX.
**Dolby Digital Plus**
Dolby Digital Plus is the next-generation audio technology for all high-definition programming and media. It combines the efficiency to meet future broadcast demands with the power and flexibility to realize the full audio potential expected in the upcoming high-definition era. Built on Dolby Digital, the multi-channel audio standard for DVD and HD broadcasts worldwide, Dolby Digital Plus was designed for the next-generation A/V receivers but remains fully compatible with all current A/V receivers.

Dolby Digital Plus delivers multi-channel audio programs of up to 7.1 channels (*) and supports multiple programs in a single encoded bitstream with the maximum bit rate potential of up to 6 Mbps and the maximum bit rate performance of up to 3 Mbps on HD DVD and 1.7 Mbps on Blu-ray Disc, and it outputs Dolby Digital bitstreams for playback on existing Dolby Digital systems. Dolby Digital Plus can accurately reproduce the sound originally intended by directors and producers.

It also features multi-channel sound with discrete channel output, interactive mixing and streaming capability in advanced systems. Supported by High-Definition Media Interface (HDMI), a single-cable digital connection is possible for high-definition audio and video.

**Dolby TrueHD**
Dolby TrueHD is the next-generation lossless encoding technology developed for high-definition optical discs in the upcoming era. Dolby TrueHD delivers tantalizing sound that is bit-for-bit identical to the studio master, unlocking the true high-definition entertainment experience on high-definition optical discs in the next generation. When coupled with high-definition video, Dolby TrueHD offers an unprecedented home theater experience with stunning sound and high-definition picture.

It supports bit rates of up to 18 Mbps and records up to 8 full-range channels (*) individually with 24-bit/96 kHz audio. It also features extensive metadata including dialogue normalization and dynamic range control. Supported by High-Definition Media Interface (HDMI), a single-cable digital connection is possible for high-definition audio and video.

HD DVD and Blu-ray Disc standards currently limit their maximum number of audio channels to eight, whereas Dolby Digital Plus and Dolby TrueHD support more than eight audio channels.

Manufactured under license from Dolby Laboratories. Dolby, Pro Logic, Surround EX and the double-D symbol are trademarks of Dolby Laboratories.

**DTS**
The DTS technologies are explained below. See www.dtstech.com for more detailed information.

**DTS Digital Surround**
DTS Digital Surround is a 5.1-channel audio coding system from DTS Inc. now widely used for DVD-Video, DVD-Audio, 5.1 music discs, digital broadcasts, and video games. It can deliver up to six discrete audio channels, comprising five full range channels, including an LFE channel. Higher sound quality is achieved through the use of a low compression rate, and high rates of transmittance during playback.

**DTS-ES**
DTS-ES (the ES stands for Extended Surround) is a decoder that is capable of decoding both DTS-ES Discrete 6.1 and DTS-ES Matrix 6.1 encoded sources. DTS-ES Discrete 6.1 gives “true” 6.1 channel sound, with a completely separate (discrete) surround back channel. DTS-ES Matrix 6.1 has a surround back channel matrixed into the surround left/right channels. Both sources are also compatible with a conventional DTS 5.1 channel decoder.

**DTS Neo:6**
DTS Neo:6 can generate 7.1 channel surround sound from any matrixed stereo source (such as video or TV) and from 5.1 channel sources. It uses both the channel information already encoded into the source, as well as its own processing to determine channel localization (with two channel sources, the “.1” subwoofer channel is generated by bass management in the receiver). Two modes (Cinema and Music) are available using DTS Neo:6 with two channel sources.

**DTS 96/24**
DTS 96/24 is an extension of the original DTS Digital Surround which offers high quality 96 kHz/24-bit audio using a DTS 96/24 decoder. This format is also fully backward compatible with all existing decoders. This means that DVD players can play this software using a conventional DTS 5.1 channel decoder.

**DTS-EXPRESS**
DTS-EXPRESS is a low-bitrate encoding technology supporting up to 5.1 channels with fixed data transfer rates. This format is incorporated with sub audio on HD DVD and secondary audio on Blu-ray Disc while boasting the potential applicability to upcoming broadcasts and memory audio contents.
DTS-HD Master Audio
DTS-HD Master Audio is a technology that delivers master audio sources recorded in a professional studio to listeners without any loss of data, preserving audio quality. DTS-HD Master Audio adopts variable data transfer rates, facilitating data transfer to the maximum rate of 24.5 Mbps in the Blu-ray disc format, 18.0 Mbps in the HD-DVD format, which by far exceeds that of a standard DVD. These high data transfer rates enable lossless transmission of 96 kHz/24-bit 7.1-channel audio sources without deteriorating the quality of the original sound. DTS-HD Master Audio is an irreplaceable technology that can reproduce sound faithfully as intended by the creator of music or movies.

Manufactured under license under U.S. Patent #’s: 5,451,942; 5,956,674; 5,974,380; 5,978,762; 6,266,616; 6,487,535; 7,212,872; 7,333,093; 7,392,195; 7,272,567 & other U.S. and worldwide patents issued & pending. DTS is a registered trademark and the DTS logos, Symbol, DTS-HD and DTS-HD Master Audio are trademarks of DTS, Inc. © 1996-2008 DTS, Inc. All Rights Reserved.

Windows Media Audio 9 Professional
Windows Media Audio 9 Professional (WMA9 Pro) is a discrete surround format developed by Microsoft Corporation.

Windows Media and the Windows logo are trademarks or registered trademarks of Microsoft Corporation in the United States and/or other countries.

About iPod

“Made for iPod” means that an electronic accessory has been designed to connect specifically to iPod and has been certified by the developer to meet Apple performance standards.

“Works with iPhone” means that an electronic accessory has been designed to connect specifically to iPhone and has been certified by the developer to meet Apple performance standards.

Apple is not responsible for the operation of this device or its compliance with safety and regulatory standards.

iPod is a trademark of Apple Inc., registered in the U.S. and other countries. iPhone is a trademark of Apple Inc.

About THX

The THX technologies are explained below. See www.thx.com for more detailed information.

In case of SC-27

In case of SC-25
• **THX Cinema processing**

THX is an exclusive set of standards and technologies established by THX Ltd. THX grew from George Lucas’ personal desire to make your experience of the film soundtrack, in both movie theatres and in your home theatre, as faithful as possible to what the director intended. Movie soundtracks are mixed in special movie theatres called dubbing stages and are designed to be played back in movie theatres with similar equipment and conditions. This same soundtrack is then transferred directly onto Laserdisc, VHS tape, DVD, etc., and is not changed for playback in a small home theatre environment. THX engineers developed patented technologies to accurately translate the sound from the movie theatre environment into the home, correcting the tonal and spatial errors that occur. On this product, when the THX indicator is on, THX features are automatically added in Cinema modes (e.g. THX Cinema, THX Surround EX).

• **Re-Equalization**

The tonal balance of a film soundtrack will be excessively bright and harsh when played back over audio equipment in the home because film soundtracks were designed to be played back in large movie theaters using very different professional equipment. Re-Equalization restores the correct tonal balance for watching a movie soundtrack in a small home environment.

• **Timbre Matching**

The human ear changes our perception of a sound depending on the direction from which the sound is coming. In a movie theatre, there is an array of surround speakers so that the surround information is all around you. In a home theatre, you use only two speakers located to the side of your head. The Timbre Matching feature filters the information going to the surround speakers so that they more closely match the tonal characteristics of the sound coming from the front speakers. This ensures seamless panning between the front and surround speakers.

• **Adaptive Decorrelation**

In a movie theatre, a large number of surround speakers help create an enveloping surround sound experience, but in a home theatre, there are usually only two speakers. This can make the surround speakers sound like headphones that lack spaciousness and envelopment. The surround sounds will also collapse into the closest speakers as you move away from the middle seating position. Adaptive Decorrelation slightly changes one surround channel’s time and phase relationship with respect to the other surround channel. This expands the listening position and creates—with only two speakers—the same spacious surround experience as in a movie theatre.

• **THX Ultra2 Plus**

Before any home theatre component can be THX Ultra2 Plus certified, it must incorporate all the features above and also pass a rigorous series of quality and performance tests. Only then can a product feature the THX Ultra2 Plus logo, which is your guarantee that the Home Theatre products you purchase will give you superb performance for many years to come. THX Ultra2 Plus requirements cover every aspect of the product including pre-amplifier and power amplifier performance and operation, and hundreds of other parameters in both the digital and analog domain.

• **THX Select2 Plus**

Before any home theatre component can be THX Select2 Plus certified, it must incorporate all the features above and also pass a rigorous series of quality and performance tests. Only then can a product feature the THX Select2 Plus logo, which is your guarantee that the Home Theatre products you purchase will give you superb performance for many years to come. THX Select2 Plus requirements cover every aspect of the product including pre-amplifier and power amplifier performance and operation, and hundreds of other parameters in both the digital and analog domain.

• **THX Surround EX**

THX Surround EX - Dolby Digital Surround EX is a joint development of Dolby Laboratories and the THX Ltd. In a movie theater, film soundtracks that have been encoded with Dolby Digital Surround EX technology are able to reproduce an extra channel which has been added during the mixing of the program. This channel is called Surround Back, places sounds behind the listener in addition to the currently available front left, front center, front right, surround right, surround left and subwoofer channels. This additional channel provides the opportunity for more detailed imaging behind the listener and brings more depth, spacious ambience and sound localization than ever before. Movies that were created using the Dolby Digital Surround EX technology, when released into the home consumer market may exhibit wording to that effect on the packaging. A list of movies created using this technology can be found on the Dolby web site at www.dolby.com.

THX Games Mode should be selected. In this mode THX ASA processing is applied to the surround channels of all 5.1 encoded music sources such as DTS, Dolby Digital and DVD-Audio to provide a wide stable rear soundstage.

• **THX Music**

For the replay of multi-channel music the THX MusicMode should be selected. In this mode THX ASA processing is applied to the surround channels of all 5.1 encoded music sources such as analog, PCM, DTS and Dolby Digital. This accurately places all audio sound information, providing a full 360 degree playback environment. THX Games Mode is unique as it gives you a smooth transition of audio in all points of the surround field.

• **Advanced Speaker Array (ASA)**

ASA is a propriety THX technology which processes the sound fed to 2 side and 2 back surround speakers to provide the optimal surround sound experience. When you set up your home theater system using all eight speaker outputs (Left, Center, Right, Surround Right, Surround Back Right, Surround Left, Surround Left and Subwoofer) placing the two Surround Back speakers close together facing the front of the room will provide the largest sweet spot. If for practical reasons you have to place the Surround Back speakers apart, you will need to go THX Audio Setup screen and choose the setting that most closely corresponds to the speaker spacing, which will re-optimize the surround sound field.

ASA is used in three new modes: THX Ultra2/Select2 CINEMA, THX Ultra2/Select2 MUSIC and THX Ultra2/Select2 GAMES.

• **Boundary Gain Compensation™**

Depending on the listener’s and the subwoofer’s position, the listener may experience an excessive bass effect. This feature compensates for excessive bass resulting from a boundary gain effect. This feature is designed to operate when used with a subwoofer certified to THX Ultra2/Select2™ specifications.

• **THX Games**

For the replay of stereo and multi-channel game audio the THX Games Mode should be selected. In this mode THX ASA processing is applied to the surround channels of all 5.1 and 2.0 encoded game sources such as analog, PCM, DTS and Dolby Digital. This accurately places all sound information, providing a full 360 degree playback environment. THX Games Mode is unique as it gives you a smooth transition of audio in all points of the surround field.

• **THX Impact™**

This product may also engage the “THX Surround EX” mode during the playback of 5.1 channel material that is not Dolby Digital Surround EX encoded. In such case the information delivered to the Surround Back channel will be program dependent and may or may not be very pleasing depending on the particular soundtrack and the tastes of the individual listener.
**THX Loudness Plus Description**
THX Loudness Plus is a new volume control technology featured in THX Ultra2 Plus™ and THX Select2 Plus™ Certified amplifiers. With THX Loudness Plus, home theater audiences can now experience the rich details in a surround mix at any volume level. A consequence of turning the volume below Reference Level is that certain sound elements can be lost or perceived differently by the listener. THX Loudness Plus compensates for the tonal and spatial shifts that occur when the volume is reduced by intelligently adjusting ambient surround channel levels and frequency response. This enables users to experience the true impact of soundtracks regardless of the volume setting. THX Loudness Plus is automatically applied when listening in any THX listening mode. The new THX Cinema, THX Music, and THX Games modes are tailored to apply the proper THX Loudness Plus settings for each type of content.

**THX Ultra2/Select2 Cinema**
THX Ultra2/Select2 Cinema mode plays 5.1 movies using all 8 speakers giving you the best possible movie watching experience. In this mode, ASA processing blends the side surround speakers and back surround speakers providing the optimal mix of ambient and directional surround sounds.

DTS-ES (Matrix and 6.1 Discrete) and Dolby Digital Surround EX encoded soundtracks will be automatically detected in Ultra2/Select2 Cinema mode if the appropriate flag has been encoded.

Some Dolby Digital Surround EX soundtracks are missing the digital flag that allows automatic switching. If you know that the movie that you are watching is encoded in Surround EX, you can manually select the THX Surround EX playback mode, otherwise THX Ultra2/Select2 Cinema mode will apply ASA processing to provide optimum replay.

**THX Ultra2/Select2 Music**
For the playback of multi-channel music the THX Ultra2/Select2 Music mode should be selected. In this mode ASA processing is applied to the surround channels of all 5.1 encoded music sources such as DTS, Dolby Digital and DVD-Audio to provide a wide stable rear soundstage.

**THX Ultra2/Select2 Games**
For the playback of stereo and multi-channel game audio the THX Ultra2/Select2 Games mode should be selected. In this mode ASA processing is applied to the surround channels of all 5.1 and 2.0 encoded game sources such as analog, PCM, DTS and Dolby Digital.

This accurately places all game audio surround information, providing a full 360 degree playback environment. THX Ultra2/Select2 Games mode is unique as it gives you a smooth transition of audio in all points of the surround field.

**About Neural – THX Surround**
Neural-THX® Surround is taking surround sound to the next level. This revolutionary new technology delivers the rich envelopment and discrete image detail of surround sound in a format that is fully compatible with stereo from various content sources. Neural-THX Surround enables 5.1, 6.1 and 7.1-channel support for gaming, movies and digital music. By unmasking the audio details, typically lost by other playback modes, audiences will experience the deep ambience and subtle details of movies, music and games.

Neural-THX Surround has been chosen as the official surround sound format for XM Satellite Radio’s “XM HD Surround,” TV sports broadcasting, 7.1 games, Music Direct Internet streaming as well as leading FM/HD radio stations worldwide. And with this technology being used by sound designers during content creation, as well as embedded into playback devices, Neural-THX Surround promises a listening experience that is true to the original mix.

Total harmonic distortion: 0.05 %

*Measured pursuant to the Federal Trade Commission’s Trade Regulation rule on Power Output Claims for Amplifiers

**Measured by Audio Spectrum Analyzer

Audio Section
Input (Sensitivity/Impedance)
- PHONO MM: 4.2 mV/47 kΩ
- LINE: 335 mV/47 kΩ

Output (Level/Impedance)
- REC: 335 mV/2.2 kΩ
- Signal-to-Noise Ratio (IHF, short circuited, A network)
  - LINE: 103 dB
  - SIGNAL-TO-NOISE RATIO [IEA, at 1 W (1 kHz)]
  - LINE: 83 dB

Tuner Section
Frequency Range (FM): 87.5 MHz to 108 MHz
Antenna Input (FM): 75 Ω unbalanced
Frequency Range (AM): 530 kHz to 1700 kHz
Antenna (AM): Loop antenna (balanced)

Video Section
Signal level
- Composite/S-Video: 1 Vp-p (75 Ω)
- Component Video: Y: 1.0 Vp-p (75 Ω), PB, PR: 0.7 Vp-p (75 Ω)

Corresponding maximum resolution
- Component Video: 1080p (1125p)

Digital In/Out Section
HDMI terminal: 19-pin (Not DV)
HDMI output type: 5 V, 100 mA
USB terminal: USB 2.0 Full Speed (Type A)
iPod terminal: USB, and Video (Composite)
SIRIUS antenna cable: 8-pin mini DIN cable

Network Section
LAN terminal: 10 BASE-T/100 BASE-TX

Integrated control section
Control (SR) terminal: Ø 3.5 Mini-jack (MONO)
Control (IR) terminal: Ø 3.5 Mini-jack (MONO)
IR signal: High Active (High Level: 2.0 V)
12 V Trigger terminal: Ø 3.5 Mini-jack (MONO)
12 V Trigger output type: 12 V, Total 50 mA
RS-232C cable type: 9-pin, cross type, female-female

Miscellaneous
Power requirements: AC 120 V, 60 Hz
Power consumption: 330 W
In standby: 0.4 W (KURO LINK OFF), 0.6 W (KURO LINK ON)
Dimensions: 420 (W) mm x 200 (H) mm x 460 (D) mm
Weight (without package): 18.5 kg (40.8 lb)

Furnished Parts Number
- MCACC Setup microphone (APM7009) 1
- Remote control unit (SC-27: AXD7539/SC-25: AXD7542) 1
- AA/IEC R6 dry cell batteries 2
- iPod cable (ADE7129) 1
- AM loop antenna 1
- FM wire antenna 1
- Power cord (ADG7111) 1
- Warranty card 1

Cleaning the unit
- Use a polishing cloth or dry cloth to wipe off dust and dirt.
- Never use thinners, benzine, insecticide sprays or other chemicals on or near this unit, since these will corrode the surface.

These operating instructions are subject to possible modifications without notice, due to improvements.

Note
- Specifications and the design are subject to possible modifications without notice, due to improvements.

Cleaning the unit
- Use a polishing cloth or dry cloth to wipe off dust and dirt.
- When the surface is dirty, wipe with a soft cloth dipped in some neutral cleanser diluted five or six times with water, and wrung out well, and then wipe again with a dry cloth. Do not use furniture wax or cleansers.
- Never use thinners, benzine, insecticide sprays or other chemicals on or near this unit, since these will corrode the surface.

Selecting fine audio equipment such as the unit you've just purchased is only the start of your musical enjoyment. Now it's time to consider how you can maximize the fun and excitement your equipment offers. This manufacturer and the Electronic Industries Association's Consumer Electronics Group want you to get the most out of your equipment by playing it at a safe level. One that lets the sound come through loud and clear without annoying blaring or distortion—and, most importantly, without affecting your sensitive hearing.

Sound can be deceiving. Over time your hearing "comfort level" adapts to higher volumes of sound. So what sounds "normal" can actually be loud and harmful to your hearing. Guard against this by setting your equipment at a safe level BEFORE your hearing adapts.

To establish a safe level:
• Start your volume control at a low setting.
• Slowly increase the sound until you can hear it comfortably and clearly, and without distortion.

Once you have established a comfortable sound level:
• Set the dial and leave it there.

Taking a minute to do this now will help to prevent hearing damage or loss in the future. After all, we want you listening for a lifetime.

Dear Customer:

Selecting fine audio equipment such as the unit you've just purchased is only the start of your musical enjoyment. Now it's time to consider how you can maximize the fun and excitement your equipment offers. This manufacturer and the Electronic Industries Association's Consumer Electronics Group want you to get the most out of your equipment by playing it at a safe level. One that lets the sound come through loud and clear without annoying blaring or distortion—and, most importantly, without affecting your sensitive hearing.

Sound can be deceiving. Over time your hearing "comfort level" adapts to higher volumes of sound. So what sounds "normal" can actually be loud and harmful to your hearing. Guard against this by setting your equipment at a safe level BEFORE your hearing adapts.

To establish a safe level:
• Start your volume control at a low setting.
• Slowly increase the sound until you can hear it comfortably and clearly, and without distortion.

Once you have established a comfortable sound level:
• Set the dial and leave it there.

Taking a minute to do this now will help to prevent hearing damage or loss in the future. After all, we want you listening for a lifetime.

We Want You Listening For A Lifetime

Used wisely, your new sound equipment will provide a lifetime of fun and enjoyment. Since hearing damage from loud noise is often undetectable until it is too late, this manufacturer and the Electronic Industries Association's Consumer Electronics Group recommend you avoid prolonged exposure to excessive noise. This list of sound levels is included for your protection.
