Operating Instructions
Thank you for buying this Pioneer product. Please read through these operating instructions so you will know how to operate your model properly. After you have finished reading the instructions, put them away in a safe place for future reference.

If the AC plug of this unit does not match the AC outlet you want to use, the plug must be removed and appropriate one fitted. Replacement and mounting of an AC plug on the power supply cord of this unit should be performed only by qualified service personnel. If connected to an AC outlet, the cut-off plug can cause severe electrical shock. Make sure it is properly disposed of after removal. The equipment should be disconnected by removing the mains plug from the wall socket when left unused for a long period of time (for example, when on vacation).

**WARNING** – TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

**IMPORTANT NOTICE** – THE SERIAL NUMBER FOR THIS EQUIPMENT IS LOCATED IN THE REAR. PLEASE WRITE THIS SERIAL NUMBER ON YOUR ENCLOSED WARRANTY CARD AND KEEP IN A SECURE AREA. THIS IS FOR YOUR SECURITY.

**NOTE:** This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This Class B digital apparatus complies with Canadian ICES-003.

This unit was manufactured under license from Dolby Laboratories. “Dolby,” “Pro Logic,” “Surround EX,” and the double-D symbol are trademarks of Dolby Laboratories.

“DTS,” “DTS-ES,” “DTS 96/24,” and “Neo:6” are trademarks of Digital Theater Systems, Inc.

For U.S. and Australia Model

Manufactured under license from Dolby Laboratories. “Dolby,” “Pro Logic,” “Surround EX,” and the double-D symbol are trademarks of Dolby Laboratories.

Manufactured under license from Dolby Laboratories. “Dolby,” “Pro Logic,” “Surround EX,” and the double-D symbol are trademarks of Dolby Laboratories.
**SAFETY INSTRUCTIONS**

**READ INSTRUCTIONS** - All the safety and operating instructions should be read before the product is operated.

**RETAI INSTRUCTIONS** - The safety and operating instructions should be retained for future reference.

**FOLLOW INSTRUCTIONS** - All operating and use instructions should be followed.

**CLEANING** - The cabinet should be cleaned only with a polishing cloth or a soft dry cloth. Never clean with furniture wax, benzine, insecticides, or other volatile liquids since these may discolor the finish or damage the finish or material of the cabinet.

**ATTACHMENTS** - Do not use attachments not recommended by the product manufacturer as they may cause hazards.

**WATER AND MOISTURE** - Do not use this product near water - for example, near a bathtub, washbowl, kitchen sink, or laundry tub; in a wet basement; or near a swimming pool; and the like.

**ACCESSORIES** - Do not place this product on an unstable cart, stand, tripod, bracket, or table. The product may fall, causing serious injury to a child or adult, and serious damage to the product.

**CART** - A product and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the product and cart combination to overturn.

**POWER LINES** - An outside antenna system should not be located in the vicinity of overhead power lines or other electric light or power circuits, or where it can fall into such power lines or circuits. When arranging the outside antenna system, extreme care should be taken to keep from touching such power lines or circuits as contact with them might result in death or serious injury.

**VENTILATION** - Slots and openings in the cabinet are provided for ventilation and to ensure reliable operation of the product and to protect it from overheating. These openings should not be blocked or covered. The openings should be never be blocked by placing the product on a bed, sofa, rug, or similar surface. This product should not be placed in a built-in installation such as a bookcase or rack unless proper ventilation is provided and the manufacturer’s instructions have been adhered to.

**POWER SOURCES** - This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your product dealer or local power company.

**LOCATION** - The appliance should be installed in a stable location.

**NORMAL PERIODS** - The power cord of the appliance should be unplugged from the outlet when left unused for a long period of time.

Chapter 1:  
**Before you start**

**Checking what’s in the box**
Please check that you’ve received the following supplied accessories:
- Setup microphone
- Remote control unit
- Dry cell batteries (AA size IEC R6) x2
- AM loop antenna
- FM wire antenna
- These operating instructions

**Loading the batteries**

**Caution**
Incorrect use of batteries may result in such hazards as leakage and bursting. Observe the following precautions:
- Never use new and old batteries together.
- Insert the plus and minus sides of the batteries properly according to the marks in the battery case.
- Batteries with the same shape may have different voltages. Do not use different batteries together.
- When disposing of used batteries, please comply with governmental regulations or environmental public instruction’s rules that apply in your country or area.

**Installing the receiver**
When installing this unit, make sure to put it on a level and stable surface. Don’t install it on the following places:
- on a color TV (the screen may distort)
- near a cassette deck (or close to a device that gives off a magnetic field). This may interfere with the sound.
- in direct sunlight
- in damp or wet areas
- in extremely hot or cold areas
- in places where there is vibration or other movement
- in places that are very dusty
- in places that have hot fumes or oils (such as a kitchen)

**Ventilation**
When installing this unit, make sure to leave space around the unit for ventilation to improve heat dispersal (at least 8 in. (20 cm) at the top). If not enough space is provided between the unit and walls or other equipment, heat will build up inside, interfering with performance and/or causing malfunctions.

Slot and openings in the cabinet are provided for ventilation and to protect the equipment from overheating. To prevent fire hazard, do not place anything directly on top of the unit, make sure the openings are never blocked or covered with items (such as newspapers, table-cloths and curtains), and do not operate the equipment on thick carpet or a bed.
Chapter 2:
5 minute guide

Introduction to home theater
Home theater refers to the use of multiple audio tracks to create a surround sound effect, making you feel like you’re in the middle of the action or concert. The surround sound you get from a home theater system depends not only on your speaker setup, but also on the source and the sound settings of the receiver.

This receiver will automatically decode multichannel Dolby Digital, DTS, or Dolby Surround sources according to your speaker setup. In most cases, you won’t have to make changes for realistic surround sound, but other possibilities (like listening to a CD with multichannel surround sound) are explained in Listening to your system on page 28.

Listening to Surround Sound
With the following quick setup guide, you should have your system hooked up for surround sound in no time at all. In most cases, you can simply leave the receiver in the default settings.

- Be sure to complete all connections before connecting to an AC power source.

1. Connect your DVD player and TV.
   See Connecting a DVD player and TV on page 13 to do this. For surround sound, you’ll want to hook up using a digital connection from the DVD player to the receiver.

2. Connect your speakers and place them for optimal surround sound.
   See Connecting the speakers on page 19.

Where you place the speakers will have a big effect on the sound. Place your speakers as shown below for the best surround sound effect. Also see Hints on speaker placement on page 20 for more on this.

3. Plug in and switch on the receiver, followed by your DVD player, subwoofer and TV.
   Make sure you’ve set the video input on your TV to this receiver. Check the manual that came with the TV if you don’t know how to do this.

4. Press QUICK SETUP on the front panel to specify your speaker setup, room size and listening position.
   Use the MULTI JOG dial to select and ENTER to confirm your selection. See Using the Quick Setup below for more on this.

5. Play a DVD, and adjust the volume.
   Make sure that DVD is showing in the receiver’s display. If it isn’t, press DVD on the remote to set the receiver to the DVD input.¹

There are several other sound options you can select. See Listening to your system on page 28 for more on this.²

Note
¹ You may need to set your DVD player to output Dolby Digital, DTS and 88.2/96kHz PCM (2 channel) audio (see your DVD player’s manual for more on this).
² Depending on your DVD player or source disc, you may only get 2 channel sound. In this case, the listening mode must be set to STANDARD (see Listening in surround sound on page 28 if you need to do this) if you want multichannel surround sound.
Using the Quick Setup

You can use the Quick Setup to get your system up and running with just a few button presses. The receiver automatically makes the necessary settings after you have selected your speaker setup, room size and listening position. Use the front panel controls for the steps below.

1. If the receiver is off, press \( \text{STANDBY/ON} \) to turn the power on.

2. Press \( \text{QUICK SETUP} \).
   - \( \text{SW DET} \) flashes in the display while the receiver checks your setup for a subwoofer. \( \text{SW YES} \) or \( \text{SW NO} \) confirms the subwoofer check, then the display prompts you to select your speaker setup.

3. Use the \( \text{MULTI JOG} \) dial to choose your speaker setup.
   When a subwoofer was detected in step 2, the following choices are available:
   - 2.1ch – 3.1ch – 4.1ch – 5.1ch – 6.1ch – 7.1ch
   If a subwoofer wasn’t detected in step 2, you can cycle between the following choices:
   - 2.0ch – 3.0ch – 4.0ch – 5.0ch – 6.0ch – 7.0ch

4. Press \( \text{ENTER} \).

5. Use the \( \text{MULTI JOG} \) dial to choose your room size.
   Depending on the distance of your speakers from the listening position, choose between small, medium, or large (S, M or L), M being an average-sized room.

6. Press \( \text{ENTER} \).

7. Use the \( \text{MULTI JOG} \) dial to choose your listening position.
   You can cycle between the following choices:
   - \( \text{FWD} \) – If you are nearer to the front speakers than the surround speakers
   - \( \text{MID} \) – If you are equal distance from the front and surround speakers
   - \( \text{BACK} \) – If you are nearer to the surround speakers than the front speakers

8. Press \( \text{ENTER} \) to confirm your setup.
   The display shows the speaker setup, room size and listening position that you have selected.

\[ \text{Note} \]

- Check the table below to find the speaker setup that corresponds with your system.

</table>

4. Press \( \text{ENTER} \).
5. Use the \( \text{MULTI JOG} \) dial to choose your room size.
   Depending on the distance of your speakers from the listening position, choose between small, medium, or large (S, M or L), M being an average-sized room.

6. Press \( \text{ENTER} \).
7. Use the \( \text{MULTI JOG} \) dial to choose your listening position.
   You can cycle between the following choices:
   - \( \text{FWD} \) – If you are nearer to the front speakers than the surround speakers
   - \( \text{MID} \) – If you are equal distance from the front and surround speakers
   - \( \text{BACK} \) – If you are nearer to the surround speakers than the front speakers

8. Press \( \text{ENTER} \) to confirm your setup.
   The display shows the speaker setup, room size and listening position that you have selected.

\[ \text{Note} \]

- See also Making receiver settings from the System Setup menu on page 34 for more setup options.
Chapter 3: Quick surround sound setup

Automatically setting up for surround sound (MCACC)
The Auto Multi-Channel Acoustic Calibration (MCACC) setup measures the acoustic characteristics of your listening area, taking into account ambient noise, speaker size and distance, and tests for both channel delay and channel level. After you have set up the microphone provided with your system, the receiver uses the information from a series of test tones to optimize the speaker settings and equalization for your particular room.

⚠️ Important
- The Auto MCACC Setup will overwrite any existing speaker settings you’ve made.
- Make sure the headphones are unplugged.

⚠️ Caution
- The test tones used in the Auto MCACC Setup are output at high volume.

1 Switch on the receiver and your TV.
2 Connect the microphone to the MCACC SETUP MIC jack on the front panel.

Make sure there are no obstacles between the speakers and the microphone.

If you have a tripod, use it to place the microphone so that it’s about ear level at your normal listening position. Otherwise, place the microphone at ear level using a table or a chair.

3 Press RECEIVER on the remote control, then press the SETUP button. An on-screen display (OSD) appears on your TV. Use ↑/↓/←/→ and ENTER on the remote control to navigate through the screens and select menu items. Press RETURN to exit the current menu.
  - Press SETUP at any time to exit the System Setup menu.1

4 Select ‘Auto MCACC’ from the System Setup menu then press ENTER.

5 Make sure ‘Normal (SB)’ is selected then press ENTER.2

Try to be as quiet as possible after pressing ENTER. The system outputs a series of test tones to establish the ambient noise level.

Note
1 The screensaver automatically starts after three minutes of inactivity. If you cancel the Auto MCACC Setup at any time, the receiver automatically exits and no settings will be made.
2 If you are planning on bi-amping your front speakers, or setting up a separate speaker system in another room, read through Surround back speaker setting on page 34 and make sure to connect your speakers as necessary before continuing.
6  Follow the instructions on-screen.
   • Make sure the microphone is connected.
   • If you’re using a subwoofer, it is automatically detected every time you switch on the system. Make sure it is on and the volume is turned up.
   • See below for notes regarding background noise and other possible interference.

7  Wait for the test tones to finish.
A progress report is displayed on-screen while the receiver outputs test tones to determine the speakers present in your setup. Try to be as quiet as possible while it’s doing this.

   • For correct speaker settings, do not adjust the volume during the test tones.

8  Confirm the speaker configuration.
The configuration shown on-screen should reflect the actual speakers you have.

   If the speaker configuration displayed isn’t correct, use ↑/↓ to select the speaker and ←/→ to change the setting (and number for surround back). When you’re finished, go to the next step.

If you see an error message (ERR) in the right side column, there may be a problem with the speaker connection. If selecting RETRY doesn’t fix the problem, turn off the power and check the speaker connections.

9  Make sure ‘OK’ is selected, then press ENTER.
A progress report is displayed on-screen while the receiver outputs more test tones to determine the optimum receiver settings for channel level, speaker distance, and Acoustic Calibration EQ.

   Again, try to be as quiet as possible while this is happening. It may take 3–8 minutes.

10 The Auto MCACC Setup has finished! Select ‘SKIP’ to go back to the System Setup menu.
The MCACC indicator on the front panel will light to show the setup is complete.
The settings made in the Auto MCACC Setup should give you excellent surround sound from your system, but it is also possible to adjust these settings manually using the System Setup menu (starting on page 34).
You can also choose to view the settings by selecting individual parameters from the Analyzed Data Check screen:
   • Speaker Setting – The size and number of speakers you’ve connected (see page 40 for more on this)
   • Speaker Distance – The distance of your speakers from the listening position (see page 42 for more on this)

Note
1 Depending on the characteristics of your room, sometimes identical speakers with cone sizes of around 5 inches (12cm) will end up with different size settings. You can correct the setting manually using the Speaker Setting on page 40.
2 The subwoofer distance setting may be farther than the actual distance from the listening position. This setting should be accurate (taking delay and room characteristics into account) and generally does not need to be changed.
Quick surround sound setup

- Channel Level – The overall balance of your speaker system (see page 41 for more on this)
- Acoustic Cal EQ – Adjustments to the frequency balance of your speaker system based on the acoustic characteristics of your room (see page 37 for more on this)

Press RETURN after you have finished checking each screen. When you’re finished, select SKIP to go back to the System Setup menu.

Other problems when using the Auto MCACC Setup

If the room environment is not optimal for the Auto MCACC Setup (too much background noise, echo off the walls, obstacles blocking the speakers from the microphone) the final settings may be incorrect. Check for household appliances (air conditioner, fridge, fan, etc.) that may be affecting the environment and switch them off if necessary. If there are any instructions showing in the front panel display, please follow them.

- Some older TVs may interfere with the operation of the microphone. If this seems to be happening, switch off the TV when doing the Auto MCACC Setup.
Chapter 4: Connecting up

Making cable connections

Important
- Before making or changing connections, switch off the power and disconnect the power cord from the AC outlet.
- Make sure not to bend the cables over the top of this unit. If this happens, the magnetic field produced by the transformers in this unit may cause a humming noise from the speakers.
- Before unplugging the power cord, switch the power into standby.

Analog audio cables
Use stereo RCA phono cables to connect analog audio components. These cables are typically red and white, and you should connect the red plugs to R (right) terminals and white plugs to L (left) terminals.

Digital audio cables
Commercially available coaxial digital audio cables or optical cables should be used to connect digital components to this receiver.¹

Video cables

Standard RCA video cables
These cables are the most common type of video connection and are used to connect to the composite video terminals. The yellow plugs distinguish them from cables for audio.

S-video cables
S-video cables give you a clearer picture reproduction than standard RCA video cables by sending separate signals for the luminance and color.

Component video cables
Use component video cables to get the best possible color reproduction of your video source. The color signal of the TV is divided into the luminance (Y) signal and the color (Pb and Pr) signals and then output. In this way, interference between the signals is avoided.

Note
- When connecting optical cables, be careful when inserting the plug not to damage the shutter protecting the optical socket.
- When storing optical cable, coil loosely. The cable may be damaged if bent around sharp corners.
- You can also use a standard RCA video cable for coaxial digital connections.

¹: VSX_816.book.fm En ページ 2005年12月8日 木曜日 午後6時54分
## Connecting a DVD player and TV

This page shows you how to connect your DVD player and TV to the receiver.

1. Connect a coaxial digital audio output on your DVD player to the DIGITAL COAX 1 (DVD/LD) input on this receiver.
   Use a coaxial digital audio cable for the connection.\(^1\)

2. Connect the composite video output and the stereo analog audio outputs\(^2\) on your DVD player to the DVD/LD inputs on this receiver.
   Use a standard RCA video cable and a stereo RCA phono cable for the connection.
   - If your DVD player has multichannel analog outputs, see Connecting the multichannel analog outputs below for how to connect it.

3. Connect the analog audio outputs from your TV to the TV/SAT inputs on this receiver.
   This will allow you to play the sound from the TV's built-in tuner. Use a stereo RCA phono cable to do this.
   - If your TV has a built-in digital decoder, you can also connect an optical digital audio output from your TV to the DIGITAL OPT 2 (TV/SAT) input on this receiver. Use an optical cable for the connection.

4. Connect the MONITOR OUT video jack on this receiver to a video input on your TV.
   Use a standard RCA video cable to connect to the composite video jack.\(^4\)

---

**Note**

1. If your DVD player only has an optical digital output, you can connect it to the optical input on this receiver using an optical cable. When you set up the receiver you'll need to tell the receiver which input you connected the player to (see The Input Assign menu on page 58).

2. This connection will allow you to make analog recordings from your DVD player.

3. For better quality, you can also connect with S-video using the S-VIDEO DVD/LD jack. If your player also has a component video output, you can connect this too. See Using the component video jacks on page 17 for more on this.

4. For better quality, you can also connect with S-video using the S-VIDEO MONITOR OUT jack. See Using the component video jacks on page 17 if you want to use the component video outputs to connect this receiver to your TV.
Connecting the multichannel analog outputs

For DVD Audio and SACD playback, your DVD player may have 5.1 channel analog outputs. In this case, you can connect the multichannel analog outputs to the multichannel inputs of this receiver as shown below. ¹

1. Connect a set of audio/video outputs on the set-top box component to the TV/SAT AUDIO and VIDEO inputs on this receiver.²

2. Use a stereo RCA phono cable for the audio connection and a standard RCA video cable for the video connection.³

3. Connect an optical digital audio output from your set-top box component to the DIGITAL OPT 2 (TV/SAT) input on this receiver. Use an optical cable for the connection.⁴

Note

⁴ The multichannel input can only be used when DVD 5.1 ch is selected (see page 33).
² If you’ve already connected your TV to the TV/SAT inputs, simply choose another input. However, to receive a signal, you’ll need to press the input select button for the input you connected the set-top box to.
³ For better quality, you can also connect with S-video using the S-VIDEO TV/SAT jack. If your set-top box also has a component video output, you can connect this too. See Using the component video jacks on page 17 for more on this.
⁴ If your satellite/cable receiver doesn’t have a digital audio output, omit this step. If it only has a coaxial digital output, you can connect it to one of the coaxial inputs on this receiver using a coaxial digital audio cable. When you set up the receiver you’ll need to tell the receiver which input you connected the set-top box to (see The Input Assign menu on page 58).
Connecting other audio components

The number and kind of connections depends on the kind of component you’re connecting. Follow the steps below to connect a CD-R, MD, DAT, tape recorder or other audio component.

1. If your component has a digital output, connect this to a digital input on the receiver as shown.

   The example shows a coaxial connection to the CD digital input jack using a coaxial digital audio cable.

2. If necessary, connect the analog audio outputs of the component to a set of spare audio inputs on this receiver.

   You’ll need to make this connection for components without a digital output, or if you want to record from a digital component. Use a stereo RCA phono cable as shown.

3. If you’re connecting a recorder, connect the analog audio outputs (REC) to the analog audio inputs on the recorder.

   The example shows an analog connection to the CD-R/TAPE/MD analog output jack using a stereo RCA phono cable.

About the WMA9 Pro decoder

This unit has an on-board Windows Media® Audio 9 Professional (WMA9 Pro) decoder, so it is possible to playback WMA9 Pro-encoded audio using a coaxial or optical digital connection when connected to a WMA9 Pro-compatible player.

Note

1. Note that you must connect digital components to analog audio jacks if you want to record to/from digital components (like an MD) to/from analog components.
Connecting up

However, the connected DVD player, set-top box, etc. must be able to output WMA9 Pro format audio signals through a coaxial or optical digital output.

Microsoft, Windows Media®, and the Windows logo are trademarks, or registered trademarks of Microsoft Corporation in the United States and/or other countries.

Connecting other video components

This receiver has audio/video inputs and outputs suitable for connecting analog or digital video recorders, including VCRs, DVD-recorders and HDD recorders.

1 Connect a set of audio/video outputs on the recorder to the DVR/VCR AUDIO and VIDEO inputs on this receiver. Use a stereo RCA phono cable for the audio connection and a standard RCA video cable for the video connection.¹

2 Connect a set of audio/video inputs on the recorder to the DVR/VCR AUDIO and VIDEO outputs on this receiver. Use a stereo RCA phono cable for the audio connection and a standard RCA video cable for the video connection.²

3 Connect a coaxial digital audio output on your video component to the DIGITAL COAX 2 (DVR/VCR) input on this receiver. Use a coaxial digital audio cable for the connection.³

Note
¹ For better quality, you can also connect with S-video using the S-VIDEO DVR/VCR IN jack. If your video component also has a component video output, you can connect this too. See Using the component video jacks on page 17 for more on this.
² For better quality, you can also connect with S-video using the S-VIDEO DVR/VCR OUT jack.
³ If your video component only has an optical digital output, you can connect it to the optical input on this receiver using an optical cable. When you set up the receiver you'll need to tell the receiver which input you connected the player to (see The Input Assign menu on page 58).
Connecting up

Using the component video jacks
Component video should deliver superior picture quality when compared to composite video. A further advantage (if your source and TV are both compatible) is progressive-scan video, which delivers a very stable, flicker-free picture. See the manuals that came with your TV and source component to check whether they are compatible with progressive-scan video.

Important
• If you connect any source component to the receiver using a component video input, you must also have your TV connected to this receiver’s COMPONENT VIDEO MONITOR OUT jacks.

1 Connect the component video outputs of your source to a set of component video inputs on this receiver. Use a three-way component video cable for the connection.

2 If necessary, assign the component video inputs to the input source you’ve connected. This only needs to be done if you didn’t connect according to the following defaults:
   • COMP 1 – DVD
   • COMP 2 – TV
   • COMP 3 – DVR
See Assigning the component video inputs on page 58 for more on this.

3 Connect the COMPONENT VIDEO MONITOR OUT jacks on this receiver to the component video inputs on your TV or monitor. Use a three-way component video cable.

Connecting to the front panel video terminal
Front video connections are accessed via the front panel using the VIDEO button. There are standard audio/video jacks as well as an S-video jack and an optical input. Hook them up the same way you made the rear panel connections.

This receiver

Video camera (etc.)
Connecting antennas
Connect the AM loop antenna and the FM wire antenna as shown below. To improve reception and sound quality, connect external antennas (see Using external antennas below).

1. Pull off the protective shields of both AM antenna wires.
2. Push open the tabs, then insert one wire fully into each terminal, then release the tabs to secure the AM antenna wires.
3. Fix the AM loop antenna to the attached stand.
   To fix the stand to the antenna, bend in the direction indicated by the arrow (fig. a) then clip the loop onto the stand (fig. b).
   - If you plan to mount the AM antenna to a wall or other surface, secure the stand with screws (fig. c) before clipping the loop to the stand. Make sure the reception is clear.
4. Place the AM antenna on a flat surface and in a direction giving the best reception.
5. Connect the FM wire antenna in the same way as the AM loop antenna.
   For best results, extend the FM antenna fully and fix to a wall or door frame. Don’t drape loosely or leave coiled up.

Using external antennas

To improve FM reception
Use an F connector to connect an external FM antenna.

To improve AM reception
Connect a 15–18 foot length of vinyl-coated wire to the AM antenna terminal without disconnecting the supplied AM loop antenna.
For the best possible reception, suspend horizontally outdoors.
Connecting the speakers

A complete setup of eight speakers (including the subwoofer) is shown here but everyone’s home setup will vary. Simply connect the speakers you have in the manner shown below. The receiver will work with just two stereo speakers (the front speakers in the diagram) but using at least three speakers is recommended, and a complete setup is best.

Make sure you connect the speaker on the right to the right terminal and the speaker on the left to the left terminal. Also make sure the positive and negative (+/−) terminals on the receiver match those on the speakers. You can use speakers with a nominal impedance between 6–16 Ω (please see Switching the speaker impedance on page 63 if you plan to use speakers with an impedance of less than 8 Ω).

Caution

- Make sure that all the bare speaker wire is twisted together and inserted fully into the speaker terminal. Use good quality speaker wire to connect the speakers to the receiver.

Note

1. If you’re not using a subwoofer, change the front speaker setting (see Speaker Setting on page 40) to large.
2. If you are using only one surround back speaker, connect it to the surround back left (L) terminal.
Connecting up

Make sure that the speaker cable you’re using is properly prepared with about \( \frac{3}{8} \) in. (10 mm) of insulator stripped from each wire, with the exposed wire strands twisted together (fig. A). Unscrew the terminal a few turns until there is enough space to insert the exposed wire (fig. B). Once the wire is in position, tighten the terminal until the wire is firmly clamped (fig. C).

![fig. A](image)
![fig. B](image)
![fig. C](image)

- The speaker terminals also accept single banana plugs. (Refer to speaker manual for details.)

Caution
- These speaker terminals are hazardous when live. To prevent the risk of electric shock when connecting or disconnecting the speaker cables, disconnect the power cord.

Hints on speaker placement
Speakers are usually designed with a particular placement in mind. Some are designed to be floorstanding, while others should be placed on stands to sound their best. Some should be placed near a wall; others should be placed away from walls. We have provided a few tips on getting the best sound from your speakers (following), but you should also follow the guidelines on placement that the speaker manufacturer provided with your particular speakers to get the most out of them.

- Place the front left and right speakers at equal distances from the TV.
- When placing speakers near the TV, we recommend using magnetically shielded speakers to prevent possible interference, such as discoloration of the picture when the TV is switched on. If you do not have magnetically shielded speakers and notice discoloration of the TV picture, move the speakers farther away from the TV.
- If you’re using a center speaker, place the front speakers at a wider angle. If not, place them at a narrower angle.
- Place the center speaker above or below the TV so that the sound of the center channel is localized at the TV screen. Also, make sure the center speaker does not cross the line formed by the leading edge of the front left and right speakers.
- It is best to angle the speakers towards the listening position. The angle depends on the size of the room. Use less of an angle for bigger rooms.
- Surround and surround back speakers should be positioned a foot-and-a-half to three feet (60 cm–90 cm) higher than your ears and tilted slightly downward. Make sure the speakers don’t face each other.
- To achieve the best possible surround sound, install your speakers as shown below. Be sure all speakers are installed securely to prevent accidents and improve sound quality.

Caution
- If you choose to install the center speaker on top of the TV, be sure to secure it with putty, or by other suitable means, to reduce the risk of damage or injury resulting from the speaker falling from the TV in the event of external shocks such as earthquakes.
- Make sure no exposed speaker wire is touching the rear panel, this may cause the receiver to turn off automatically.
Connecting up

Overhead view of speaker setup
You can also refer to the 3-D speaker setup illustration on page 7.

AC outlet
Power supplied through this outlet is turned on and off by the receiver’s power switch. Total electrical power consumption of connected equipment should not exceed 100 W (0.8 A).

- This unit should be disconnected by removing the power plug from the wall socket when not in regular use (ex. when on vacation).

Caution
- Do not connect a TV set, monitor, heater, or similar appliance to this unit’s AC outlet.
- Do not connect appliances with high power consumption to the AC outlet in order to avoid overheating and fire risk. This can also cause the receiver to malfunction.
- Since a subwoofer or power amplifier can exceed the 100W maximum when playing sources at a high volume, this type of equipment should not be connected to the AC outlet.
Chapter 5: Controls and displays

Front panel

1 Input select buttons
Press to select an input source.

2 Digital Precision Processing indicator
Lights to indicate digital processing.

3 Character display
See Display on page 23.

4 MCACC indicator
Lights when Acoustic Calibration EQ (page 30) is on (Acoustic Calibration EQ is automatically set to ALL CH ADJUST after the Auto MCACC Setup (page 9) or EQ Auto Setup (page 37)).

5 ENTER

6 MULTI JOG dial
Use the MULTI JOG dial to select various settings and menu options.

7 LISTENING MODE buttons
STANDARD – Press for Standard decoding and to switch between the various Pro Logic IIx and Neo:6 options (page 28).
ADVANCED SURR – Use to switch between the surround modes (page 29).
ST/DIRECT/AUTO SURR
Selects stereo/direct playback (page 30). Also selects Auto Surround (Auto playback on page 28) and XM Surround (page 53).
Controls and displays

8 PHONES jack
Use to connect headphones (when connected, there is no sound output from the speakers).

9 STANDBY/ON
Switches the receiver between on and standby.

10 VIDEO INPUT
See Connecting to the front panel video terminal on page 17.

11 MCACC SETUP MIC jack
Use to connect the supplied microphone.

12 MASTER VOLUME dial

13 DIMMER
Dims or brightens the display.

14 ANALOG ATT
Attenuates (lowers) the level of an analog input signal to prevent distortion.

15 MIDNIGHT/LOUDNESS
Switches between Midnight and Loudness listening (page 32).

16 SPEAKERS
Use to change the speaker system (page 54) and the impedance setting (page 63).

17 TUNING / STATION
Selects the frequency (page 43) and station presets (page 43) when using the tuner.

18 TUNER EDIT
Press to memorize and name a station for recall (page 43).

19 TONE
Press this button to access the bass and treble controls, which you can then adjust with the MULTI JOG dial (page 32).

20 QUICK SETUP
See Using the Quick Setup on page 8.

21 System Setup menu controls
SETUP – Use with the MULTI JOG dial to access the System Setup menu (page 9, page 34, page 58).
RETURN – Press to confirm and exit the current menu.

22 SIGNAL SELECT
Use to select an input signal (page 33).

23 SBch PROCESSING
Selects surround back channel processing or the virtual surround back mode (page 31).

24 ACOUSTIC EQ
Press to select an Acoustic Calibration EQ setting (page 30).

Display

1 SIGNAL indicators
Lights to indicate the type of input signal:
AUTO – Lights when AUTO signal select is on.
SB – Depending on the source, this lights when a signal with surround back channel encoding is detected.
DIGITAL – Lights when a digital audio signal is detected.

-analytics – Lights when a Dolby Digital encoded signal is detected.

-ANALOG – Lights when an analog signal is detected.

-DTS – Lights when a source with DTS encoded audio signals is detected.

When the STANDARD mode is on, this lights to indicate decoding of a DTS multichannel signal.

When the STANDARD mode of the receiver is on, this lights to indicate decoding of a Dolby Digital multichannel signal.

When the (STANDARD) Pro Logic II mode of the receiver is on, this lights to indicate Pro Logic II decoding.

When the (STANDARD) Pro Logic IIx mode of the receiver is on, this lights to indicate Pro Logic IIx decoding (see Listening in surround sound on page 28).

Lights during Virtual surround back processing (page 31).

Lights when source direct playback is in use. Direct playback bypasses the tone controls for the most accurate reproduction of a source.

Lights when Auto Surround (see Auto playback on page 28) or XM Surround (page 53) is on.

Lights when ANALOG ATT is used to attenuate (reduce) the level of the analog input signal.

Lights when the sleep mode is active (see Remote control below).

Lights when a Dolby Digital Surround EX encoded signal is detected.

Shows the overall volume level.

These indicators show the EQ balance for each channel in Checking your Acoustic Calibration EQ settings on page 39. Also, L and R light when the Sound Retriever is active (page 32).
3 Number buttons and other receiver/component controls

Use the number buttons to directly select a radio frequency (page 43) or the tracks on a CD, DVD, etc.

**DISC (ENTER)** can be used to enter commands for TV or DTV, and can also be used to select a disc in a multi-CD player.

The following are accessed by pressing the **RECEIVER** button first:

- **SLEEP** – Press to change the amount of time before the receiver switches into standby (90 min – 60 min – 30 min – Off). You can check the remaining sleep time at any time by pressing **SLEEP** once.
- **SB ch** – Selects the surround back channel mode (page 31) or virtual surround back mode (page 31).
- **ANALOG ATT** – Attenuates (lowers) the level of an analog input signal to prevent distortion.
- **SR +** – Switches the SR+ mode on/off (page 57).
- **DIMMER** – Dims or brightens the display.
- **MIDNIGHT/LOUDNESS** – Use Midnight when listening to movie soundtracks at low volume. Use Loudness to boost the bass and treble at low volume (page 32).
- **D.ACCESS** – After pressing, you can access a radio station directly using the number buttons (page 43).
- **CLASS** – Switches between the three banks (classes) of radio station presets (page 43).

4 Tuner/component control buttons/SETUP

The following button controls (except **SETUP**) can be accessed after you have selected the corresponding **MULTI CONTROL** button (DVD, FM, AM, TV, etc.)

- **TOP MENU** – Displays the disc ‘top’ menu of a DVD.
- **DTV MENU** – Displays menus on a digital TV.
Controls and displays

MENU – Displays the disc menu of DVD-Video discs. It also displays TV and DTV menus.

T.EDIT – Press to memorize and name a station for recall (page 43).

SETUP (Press RECEIVER first to access) Use to access the System Setup menu (see page 34).

GUIDE – Displays the guides on a digital TV.

RETURN – Press to confirm and exit the current menu (also use to return to the previous menu with DVDs or to select closed captioning with DTV).

5  (TUNE/ST +/-)/ENTER Use the arrow buttons when setting up your surround sound system (see page 34). Also used to control DVD menus/options and for deck 1 of a double cassette deck player. Use the TUNE +/- buttons to find radio frequencies and use ST left/right to find preset stations (page 43).

6 TV CONTROL buttons These buttons are dedicated to control the TV assigned to the TV CTRL button. Thus if you only have one TV to hook up to this system assign it to the TV CTRL MULTI CONTROL button. If you have two TVs, assign the main TV to the TV CTRL button (see page 46 for more on this).

TV – Use to turn on/off the TV power.

TV VOL +/- – Use to adjust the TV volume.

INPUT SELECT – Use to select the TV input signal.

TV CH +/- – Use to select channels.

7 Component control buttons The main buttons ( , , etc.) are used to control a component after you have selected it using the MULTI CONTROL buttons.

The controls above these buttons can be accessed after you have selected the corresponding MULTI CONTROL button (for example DVD, DVR or TV (when connected to a DTV)).

DTV ON/OFF – Switches a digital TV on/off.

DTV INFO – Use to bring up information screens on a digital TV.

MPX – Switches between stereo and mono reception of FM broadcasts. If the signal is weak then switching to mono will improve the sound quality (page 43).

AUDIO – Changes the audio language or channel on DVD discs.

DISP – Switches between named station presets and radio frequencies (page 44).

SUBTITLE – Displays/changes the subtitles included in multilingual DVD Video discs.

8 RECEIVER CONTROL buttons

STANDARD – Press for Standard decoding and to switch between the various Pro Logic Ilx and Neo:6 options (page 28).

ADV.SURR. – Use to switch between the various surround modes (page 29).

STEREO – Switches between direct and stereo playback. Direct playback bypasses the tone controls and any other signal processing for the most accurate reproduction of a source (page 30). Also selects the Auto Surround mode (Auto playback on page 28).
### Controls and displays

**AUTO SURR** – Selects Auto Surround (Auto playback on page 28) and XM Surround (page 53).

**DIALOG E** – Use to make dialog stand out when watching TV or a movie (page 32).

**S. RETRIEVER** – Press to restore CD quality sound to compressed audio sources (page 32).

**ACOUSTIC EQ** – Press to select an Acoustic Calibration EQ setting (page 30).

**SIGNAL SEL** – Use to select an input signal (page 33).

**SHIFT**
Press to access the DVR controls (above the component control buttons) as well as some receiver controls.

**INPUT SELECT**
Use to select the input source (use SHIFT for INPUT SELECT). (page 27)

**SOURCE**
Press to turn on/off other components connected to the receiver (see page 46 for more on this).

**Character display (LCD)**
This display shows information when transmitting control signals. The following commands are shown when you’re setting the remote to control other components (see Controlling the rest of your system on page 46):

- **SETUP** – Indicates the setup mode, from which you choose the options below.

- **PRESET** – See Selecting preset codes directly on page 47.

- **DIRECT F** – See Direct function on page 48.

- **ERASE** – See Erasing one of the remote control button settings on page 47.

- **RESET** – See Erasing all of the remote control presets on page 47.

- **READ ID** – See Confirming preset codes on page 48.

**RECEIVER**
Switches the remote to control the receiver (used to select the green commands above the number buttons (DIMMER, etc). Also use this button to set up surround sound (page 9, page 34).

**VOL +/-**
Use to set the listening volume.

**MUTE**
Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).

**EFFECT/CH SEL**
Press repeatedly to select a channel, then use +/- to adjust the level (see Tip on page 42). Also adjusts the level of the Advanced Surround effects, Dolby Pro Logic IIX Music, and Neo:6 Music parameters (page 29). You can then use the +/- buttons to make these adjustments.

### Operating range of remote control

The remote control may not work properly if:

- There are obstacles between the remote control and the receiver's remote sensor.
- Direct sunlight or fluorescent light is shining onto the remote sensor.
- The receiver is located near a device that is emitting infrared rays.
- The receiver is operated simultaneously with another infrared remote control unit.
Chapter 6:  
Listening to your system

**Important**

- Certain features explained in this section will not be possible depending on the source (for example, PCM 88.2 / 96 kHz, DTS 96 kHz (24 bit) or WMA 9 Pro sources).

**Auto playback**
The simplest, most direct listening option is the Auto Surround feature. With this, the receiver automatically detects what kind of source you’re playing and selects multichannel or stereo playback as necessary.1

- While listening to a source, press AUTO SURR for auto playback of a source. Press repeatedly until AUTOSURR shows briefly in the display (it will then show the decoding or playback format). Check the digital format indicators in the display to see how the source is being processed.
- When listening to XM Radio, AUTO SURR selects the XM Surround feature (page 53).

**Listening in surround sound**
Using this receiver, you can listen to any source in surround sound. However, the options available will depend on your speaker setup and the type of source you’re listening to.

If you connected surround back speakers, see also Using surround back channel processing on page 31.2

The following modes provide basic surround sound for stereo and multichannel sources.

- While listening to a source, press STANDARD. If necessary, press repeatedly to select a listening mode.
  - If the source is Dolby Digital, DTS, or Dolby Surround encoded, the proper decoding format will automatically be selected and shows in the display.3

With two channel sources, you can select from:

- **2** Pro Logic IIx MOVIE – Up to 7.1 channel sound, especially suited to movie sources
- **2** Pro Logic IIx MUSIC – Up to 7.1 channel sound, especially suited to music sources
- **2** Pro Logic IIx GAME – Up to 7.1 channel sound, especially suited for video games
- **2** PRO LOGIC – 4.1 channel surround sound (sound from the surround speakers is mono)
- Neo:6 CINEMA – 6.1 channel sound, especially suited to movie sources

---

1. Stereo surround (matrix) formats are decoded accordingly using Neo:6 CINEMA or 2 Pro Logic IIx MOVIE (see Listening in surround sound above for more on these decoding formats).
2. The Auto Surround feature is canceled if you connect headphones or select the multichannel analog inputs.
3. If surround back processing (page 31) is switched to OFF, or the surround back speakers are set to NO (this happens automatically if the Surround back speaker setting on page 34 is set to anything but Normal (SB)), 2 Pro Logic II becomes 2 Pro Logic II (5.1 channel sound).

---

Note 28 En
Listening to your system

• Neo:6 MUSIC – 6.1 channel sound, especially suited to music sources
  With multichannel sources, if you have connected surround back speaker(s) and have selected SB ON, you can select (according to format):
  • Pro Logic IIx MOVIE – See above
  • Pro Logic IIx MUSIC – See above
  • Dolby Digital EX – Creates surround back channel sound for 5.1 channel sources and provides pure decoding for 6.1 channel sources (like Dolby Digital Surround EX)
  • DTS-ES – Allows you to hear 6.1 channel playback with DTS encoded sources

Using the Advanced surround effects
The Advanced surround effects can be used for a variety of additional surround sound effects. Most Advanced Surround modes are designed to be used with film soundtracks, but some modes are also suited for music sources. Try different settings with various soundtracks to see which you like.¹

• Press ‘ADV.SURR’ repeatedly to select a listening mode.
  • ADV. MOVIE – Suitable for movie sources.
  • ADV. MUSIC – Suitable for music sources.
  • TV SURR. – Provides surround sound for both mono and stereo TV sources.
  • SPORTS – Suitable for sports programs.
  • ADV. GAME – Suitable for video games.
  • EXPANDED – Simulates multichannel surround sound for two-channel sources.²

• 7-STEREO – Gives multichannel sound to a stereo source, using all of your speakers.
• VIR. SURR. – A virtual surround effect using just the subwoofer and front speakers.
• PHONESUR. – Creates the effect of overall surround with headphones.

Setting the effect options
When using surround effects, there are a number of settings you can adjust.

1  Press EFFECT/CH SEL repeatedly to select the setting you want to adjust. Depending on the current status / mode of the receiver, certain options may not appear. Check the table below for notes on this.
2  Use the +/- buttons to set it as necessary. See the table below for the options available for each setting. The defaults, if not stated, are listed in bold.
3  Press EFFECT/CH SEL again to adjust other settings.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What it does</th>
<th>Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Center Width ¹ ³ ³</td>
<td>Spreads the center channel between the front right and left speakers, making it sound wider (higher settings) or narrower (lower settings).</td>
<td>0 to 7 Default: 3</td>
</tr>
<tr>
<td>Dimension ²</td>
<td>Adjusts the surround sound balance from front to back, making the sound more distant (minus settings), or more forward (positive settings).</td>
<td>–3 to +3 Default: 0</td>
</tr>
<tr>
<td>Panorama ³ ³</td>
<td>Extends the front stereo image to include surround speakers for a ‘wraparound’ effect.</td>
<td>OFF ON</td>
</tr>
</tbody>
</table>

Note
1  • If you press ADVANCED SURROUND when the headphones are connected, the PHONES SURROUND mode will automatically be selected.
• Depending on the source and the sound mode you have selected, you may not get sound from the surround back speakers in your setup. For more on this, refer to Using surround back channel processing on page 31.
2  • When an Advanced Surround listening mode is selected, the effect level can be adjusted using the EFFECT parameter in Setting the effect options above.

² Use with Dolby Pro Logic for a stereo surround effect (stereo field is wider than Standard modes with Dolby Digital sources).
Listening to your system

Listening in stereo
When you select **STEREO** or **DIRECT**, you will hear the source through just the front left and right speakers (and possibly your subwoofer depending on your speaker settings).

Dolby Digital and DTS multichannel sources are downmixed to stereo.

- While listening to a source, press **STEREO** for stereo playback.
  Press repeatedly to switch between:
  - **STEREO** – The audio is heard with your surround settings and you can still use the Midnight, Loudness, and Tone functions.
  - **DIRECT** – Bypass all effects and surround settings so that the audio remains as close to the source audio signal as possible.¹
  - **AUTO SURR.** – See Auto playback on page 28 for more on this.

<table>

¹ Only available with 2ch sources in Dolby Pro Logic IIx Music mode (also available with 2ch Pro Logic II 5.1 sound).

² Only available with 2ch sources in Neo:6 Music mode.

Listening with Acoustic Calibration EQ
- Default setting: **OFF / ALL CH** (after the Auto MCACC Setup or EQ Auto Setting)

You can listen to sources using the Acoustic Calibration Equalization set in Automatically setting up for surround sound (MCACC) on page 9 or Acoustic Calibration EQ on page 37. Refer to these pages for more on Acoustic Calibration Equalization.

- While listening to a source, press **ACOUSTIC EQ**.
  Press repeatedly to select between:
  - **ALL CH** – No special weighting is given to any one channel.
  - **F. ALIGN** – All speakers are heard in accordance with the front speaker settings.
  - **CUSTOM 1/2** – Custom settings
  - **EQ OFF** – Switches Acoustic Calibration EQ off.

The MCACC indicator on the front panel lights when Acoustic Calibration EQ is active.²

Note
1. If you switch on Midnight listening, Loudness, Dialog Enhancement, the Sound Retriever or the tone controls when **DIRECT** is selected, the receiver automatically switches to **STEREO**.
2. You can't use Acoustic Calibration EQ with DVD 5.1ch, WMA9 Pro or XM Surround, and it has no effect with headphones.
   - If you switch on Acoustic Calibration EQ when **DIRECT** is selected, the receiver automatically switches to **STEREO**.
Using surround back channel processing

- Default setting: SB ON

You can have the receiver automatically use 6.1 decoding for 6.1 encoded sources (for example, Dolby Digital EX or DTS-ES), or you can choose to always use 6.1 decoding (for example, with 5.1 encoded material). With 5.1 encoded sources, a surround back channel will be generated, but the material may sound better in the 5.1 format for which it was originally encoded (in which case, you can simply switch surround back processing off).\(^1\)

The table below indicates when you will hear the surround back channel (\(\bullet\) = Sound plays through surround back speaker(s)).

- **Press SB ch (SB ch PROCESSING) to select a surround back channel option.**

Each press cycles through the following:

- **SB ON** – 6.1 decoding is always used (for example, a surround back channel will be generated for 5.1 encoded material)
- **SB AUTO** – Automatically switches to 6.1 decoding for 6.1 encoded sources (for example, Dolby Digital EX or DTS-ES)
- **SB OFF** – Maximum 5.1 playback

### Using Virtual Surround Back (VSB)

When you’re not using surround back speakers, selecting this mode allows you to hear a virtual surround back channel through your surround speakers. You can choose to listen to sources with no surround back channel information, or if the material sounds better in the format (for example, 5.1) for which it was originally encoded, you can have the receiver only apply this effect to 6.1 encoded sources like Dolby Digital EX or DTS-ES.\(^2\)

The table indicates when you will hear the virtual surround back channel (\(\bullet\) = Sound plays through surround speaker(s)).

- **Press SB ch (SB ch PROCESSING) to select a virtual surround back channel option.**

Each press cycles through the following:

- **VSB ON** – Virtual Surround Back is always used (for example, on 5.1 encoded material)
- **VSB AUTO** – Virtual Surround Back is automatically applied to 6.1 encoded sources (for example, Dolby Digital EX or DTS-ES)
- **VSB OFF** – Virtual Surround Back mode is switched off

### Type of source

<table>
<thead>
<tr>
<th>Type of source</th>
<th>SB ch Processing / Virtual SB mode</th>

<th>Advanced surround</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dolby Digital EX/DTS-ES/ WMA9 Pro encoded multichannel sources with 6.1ch surround</td>
<td>ON (\bullet)</td>
<td>(\bullet)</td>
<td>(\bullet)</td>
</tr>
<tr>
<td>Dolby Digital/DTS/WMA9 Pro encoded multichannel sources</td>
<td>ON (\bullet)</td>
<td>(\bullet)</td>
<td>(\bullet)</td>
</tr>
<tr>
<td>Dolby Digital/DTS/WMA9 Pro encoded stereo source; other digital stereo source</td>
<td>ON (\bullet) (\bullet) (\bullet)</td>
<td>(\bullet)</td>
<td>(\bullet)</td>
</tr>
</tbody>
</table>

\(\bullet\) Note

1. You can’t use the surround back channel with headphones, the STEREO / DIRECT mode, or if the surround back speaker is set to NO in Speaker Setting on page 40. Also, the Surround back speaker setting on page 34 must be set to Normal (SB) to hear the surround back channel.

2. You can’t use virtual surround back with headphones, the STEREO / DIRECT mode, or if the surround speaker is set to NO in Speaker Setting on page 40 (however, the surround back speaker must be set to NO).
**Listening to your system**

<table>
<thead>
<tr>

<td></td>
</tr>
</tbody>
</table>

1. Excluding WMA9 Pro format
2. Only applicable when using the Virtual Surround Back mode.
3. Not applicable when using the Virtual Surround Back mode.

**Using Midnight and Loudness**
The Midnight listening feature allows you to hear effective surround sound of movies at low volume levels. The effect automatically adjusts according to the volume at which you're listening. The Loudness listening feature can be used to get good bass and treble from music sources at low volume levels.

- Press MIDNIGHT/LOUDNESS to switch between MIDNIGHT, LOUDNESS, and OFF.

**Using the Sound Retriever**
When audio data is removed during the compression process, sound quality often suffers from an uneven sound image. The Sound Retriever feature employs new DSP technology that helps bring CD quality sound back to compressed 2-channel audio by restoring sound pressure and smoothing jagged artifacts left over after compression.¹

- Press S. RETRIEVER to switch the sound retriever on or off.

**Enhancing dialog**
- Default setting: OFF
The Dialog Enhancement feature localizes dialog in the center channel to make it stand out from other background sounds in a TV or movie soundtrack.

- Press DIALOG E to switch dialog enhancement on or off.

**Using the tone controls**
Depending on what you are listening to, you may want to adjust the bass or treble using the front panel tone control.

1. Press TONE to select the frequency you want to adjust. Press to switch between BASS and TREBLE.
2. Use the MULTI JOG dial to change the amount of bass or treble as necessary. Wait about five seconds for your changes to be input automatically.

---

¹ The Sound Retriever is only applicable to 2-channel sources.
Listening to your system

Playing other sources

1. Turn on the power of the playback component.
2. Turn on the power of the receiver.
3. Select the source you want to playback. Use the input select buttons.¹
4. Start playback of the component you selected in step 1.

Choosing the input signal

- Default setting: AUTO
You need to hook up a component to both analog and digital inputs on the rear of the receiver to select between input signals.²
- Press SIGNAL SEL (SIGNAL SELECT) to select the input signal corresponding to the source component.
Each press cycles through the options as follows:
  - AUTO – This is the default setting. The receiver selects the first available signal in the following order: DIGITAL, ANALOG.
  - ANALOG – Selects an analog signal.
  - DIGITAL – Selects an optical or coaxial digital signal.
When set to DIGITAL or AUTO, DIGITAL lights when a Dolby Digital signal is input, and DTS lights when a DTS signal is input.

Selecting the multichannel analog inputs

If you have connected a decoder or a DVD player with multichannel analog outputs to this receiver (page 14), you must select the analog multichannel inputs for surround sound.³
1. Make sure you have set the playback source to the proper output setting. For example, you might need to set your DVD player to output multichannel analog audio.
2. Press DVD/LD.
3. Press SIGNAL SELECT to select the multichannel analog inputs. DVD 5.1ch shows in the display and the ANALOG indicator lights.

Note
1. If your source is the TV’s built-in tuner, switch to the channel you want to watch, otherwise make sure that the TV’s video input is set to this receiver (For example, if you connected this receiver to the VIDEO jacks on your TV, make sure that the VIDEO input is selected). Turn down the volume of your TV so that all the sound is coming from the speakers connected to this receiver.
2. This receiver can only play back Dolby Digital, PCM (32 kHz to 96 kHz), DTS and WMA9 Pro digital signal formats. With other digital signal formats, set to ANALOG.
  - You may get digital noise when a LD or CD player compatible with DTS is playing an analog signal. To prevent noise, make the proper digital connections (Connecting other audio components on page 15) and set the signal input to DIGITAL.
  - Some DVD players don’t output DTS signals. For more details, refer to the instruction manual supplied with your DVD player.
3. During playback from the multichannel inputs, you can’t use any of the sound features/modes and only the volume and channel levels can be set.
  - You can’t listen to your speaker B (Second Zone) system during playback from the multichannel inputs.
Chapter 7: The System Setup menu

Making receiver settings from the System Setup menu

The following section shows you how to make detailed settings to specify how you’re using the receiver (for example, if you want to set up two speaker systems in separate rooms), and also explains how to fine-tune individual speaker system settings to your liking.

1 Switch on the receiver and your TV.
   Use the RECEIVER button to switch on.1

2 Press RECEIVER on the remote control, then press the SETUP button.2
   An on-screen display (OSD) appears on your TV. Use \u2192/\u2191/\u2190/\u2193 and ENTER on the remote control to navigate through the screens and select menu items. Press RETURN to confirm and exit the current menu.

3 Select the setting you want to adjust.
   • Surr Back System – Specify how you are using your surround back speakers (see Surround back speaker setting below).
   • Auto MCACC – This is a quick and effective automatic surround setup (see Automatically setting up for surround sound (MCACC) on page 9).
   • Manual MCACC – Fine tune your speaker settings and customize the Acoustic Calibration EQ (see Manual MCACC speaker setup below).
   • Manual SP Setup – Specify the size, number, distance and overall balance of the speakers you’ve connected (see Manual speaker setup on page 39).
   • Input Assign – Specify what you’ve connected to the digital and component video inputs (see The Input Assign menu on page 58).
   • Other Setup – Make customized settings to reflect how you are using the receiver (see The Other Setup menu on page 59).

Surround back speaker setting

• Default setting: Normal (SB)
   There are several ways you can use the surround back speaker channels with this system. In addition to a normal home theater setup where they are used for the surround back speakers, they can be used for bi-amping the front speakers or as a separate speaker system in another room.

---

1 If headphones are connected to the receiver, disconnect them.
2  You can’t use the System Setup menu when the XM Radio input is selected.
• Press SETUP at any time to exit the System Setup menu.
The System Setup menu

1 Select ‘Surr Back System’ from the System Setup menu.
See Making receiver settings from the System Setup menu above if you’re not already at this screen.

2 Select the surround back speaker setting.
- Normal (SB) – Select for normal home theater use with surround back speakers in your main (speaker system A) setup.
- Second Zone – Select to use the (surround back) B speaker terminals to listen to stereo playback in another room (see Second Zone speaker B setup on page 54).
- Front Bi-Amp – Select this setting if you’re bi-amping your front speakers (see Bi-amping your front speakers on page 55).

3 When you’re finished, press RETURN.
You return to the System Setup menu.

Manual MCACC speaker setup
You can use the settings in the Manual MCACC setup menu to make detailed adjustments when you’re more familiar with the system. Before making these settings, you should have already completed Automatically setting up for surround sound (MCACC) on page 9. You only need to make these settings once (unless you change the placement of your current speaker system or add new speakers).

Important
- For some of the settings below, you’ll have to connect the setup microphone to the front panel and place it about ear level at your normal listening position. See Automatically setting up for surround sound (MCACC) on page 9 if you’re unsure how to do this. Also see Other problems when using the Auto MCACC Setup on page 11 for notes regarding background noise and other possible interference.
  - If you’re using a subwoofer, switch it on and turn up the volume as necessary.

1 Select ‘Manual MCACC’ from the System Setup menu.
See Making receiver settings from the System Setup menu above if you’re not already at this screen.

2 Select the setting you want to adjust.
If you’re doing this for the first time, you might want to make these settings in order.
- Fine Ch Level – Make fine adjustments to the overall balance of your speaker system (see Fine Channel Level below).
- Fine SP Distance – Make precise delay settings for your speaker system (see Fine Speaker Distance on page 36).

The last five settings are specifically for customizing the parameters explained in Acoustic Calibration EQ below:
- EQ AUTO Setting – Measure the acoustic characteristics of your room and automatically adjust the frequency balance of your speaker system (see Setting the Acoustic Calibration EQ automatically below).
- EQ Data Copy – Copy Acoustic Calibration EQ settings for manual adjustment (see Copying your Acoustic Calibration EQ settings below).
The System Setup menu

- EQ CUSTOM1/2 Adjust – Make detailed manual adjustments to your custom Acoustic Calibration EQ settings (see Setting the Acoustic Calibration EQ manually on page 38).
- EQ Data Check – Check the ALL CH ADJUST, FRONT ALIGN and custom settings using the on-screen display (see Checking your Acoustic Calibration EQ settings on page 39).

Fine Channel Level
- Default setting: 0dB (all channels)
You can achieve better surround sound by properly adjusting the overall balance of your speaker system. The following setting can help you make detailed adjustments that you may not achieve using the Manual speaker setup on page 39.

1 Select ‘Fine Ch Level’ from the Manual MCACC setup menu.
You'll hear test tones from each speaker in turn. Since the left speaker is the main reference speaker, the level is fixed.

Caution
- The test tones used in the System Setup are output at high volume (the volume increases to –18 dB automatically).

2 Select each channel in turn and adjust the levels (+/–10dB) as necessary.
Use ↑/↓ to adjust the volume of the speaker you selected to match the reference speaker. When it sounds like both tones are the same volume, press ENTER to confirm and continue to the next channel.

Fine Speaker Distance
- Default setting: 10.0 ft (all channels)
For proper sound depth and separation with your system, it is necessary to add a slight bit of delay to some speakers so that all sounds will arrive at the listening position at the same time. The following setting can help you make detailed adjustments that you may not achieve using the Manual speaker setup below.

1 Select ‘Fine SP Distance’ from the Manual MCACC setup menu.
The volume increases to the reference level.

2 Adjust the distance of the left channel from the listening position.

After pressing ENTER, test tones will be output.
3 Select each channel in turn and adjust the distance as necessary.
Use \(</>\) to adjust the delay of the speaker you selected to match the reference speaker. The delay is measured in terms of speaker distance from 0.5 to 45.0 feet.

Listen to the reference speaker and use it to measure the target channel. From the listening position, face the two speakers with your arms outstretched pointing at each speaker. Try to make the two tones sound as if they are arriving simultaneously at a position slightly in front of you and between your arm span.

When it sounds like the delay settings are matched up, press ENTER to confirm and continue to the next channel.
- For comparison purposes, the reference speaker will change depending on which speaker you select.
- If you want to go back and adjust a channel, simply use \(</>\) to select it.

4 When you’re finished, press RETURN. You return to the Manual MCACC setup menu.

Acoustic Calibration EQ
Acoustic Calibration Equalization is a kind of room equalizer for your speakers (excluding the subwoofer). It works by measuring the acoustic characteristics of your room and neutralizing the ambient characteristics that can color the original source material. This provides a "flat" equalization setting. If you’re not satisfied with the automatic adjustment, you can also adjust these settings manually to get a frequency balance that suits your tastes.

Setting the Acoustic Calibration EQ automatically
If you have already completed Automatically setting up for surround sound (MCACC) on page 9, ALL CH ADJUST and FRONT ALIGN (below) should already be set. Therefore, if you want to adjust your settings manually, you can skip to Setting the Acoustic Calibration EQ manually below.

1 Select ‘EQ AUTO Setting’ from the Manual MCACC setup menu.

- Make sure the microphone is connected.
- If you’re using a subwoofer, it is automatically detected every time you switch on the system. Make sure it is on and the volume is at the middle position.
- See Other problems when using the Auto MCACC Setup on page 11 for notes regarding high background noise levels and other possible interference.

2 Wait for the Auto MCACC Setup to finish.

As the receiver outputs test tones, the frequency balance is adjusted automatically for the following settings:
The System Setup menu

- **ALL CH ADJUST** – A ‘flat’ setting where all the speakers are set individually so no special weighting is given to any one channel.
- **FRONT ALIGN** – All speakers are set in accordance with the front speaker settings (no equalization is applied to the front left and right channels).

You return to the Acoustic Cal EQ setup menu after the Acoustic Calibration Equalization is set.

**Copying your Acoustic Calibration EQ settings**

If you want to manually adjust the Acoustic Calibration EQ (see Setting the Acoustic Calibration EQ manually below), we recommend copying the **ALL CH ADJUST** or the **FRONT ALIGN** settings from the EQ AUTO setup above (or from Automatically setting up for surround sound (MCACC) on page 9) to one of the custom settings. Instead of just a flat EQ curve, this will give you a reference point from which to start.

2. Select CUSTOM1 or CUSTOM2 then use ⬅️/➡️ to select the setting you want to copy.
3. Select ‘OK’ to copy and confirm.

**Setting the Acoustic Calibration EQ manually**

Before manually adjusting the Acoustic Calibration EQ, we recommend copying the **ALL CH ADJUST** or the **FRONT ALIGN** settings from the auto setup above (or from Automatically setting up for surround sound (MCACC) on page 9) to one of the custom settings. Instead of just a flat EQ curve, this will give you a reference point from which to start (see Copying your Acoustic Calibration EQ settings above for how to do this).

1. Select ‘EQ CUSTOM1 Adjust or EQ CUSTOM2 Adjust’ from the Manual MCACC setup menu.
2. Select which method you would like to use to adjust the overall frequency balance. It is best to choose whichever one you copied to the custom setting in Copying your Acoustic Calibration EQ settings above.
   - **ALL CH ADJUST** – All the speakers can be set independently so no special weighting is given to any one channel. When adjusting, test tones will sound for each individual channel.
   - **FRONT ALIGN** – Speakers are set in accordance with the front speaker settings. The sound of the test tone will alternate between the left front (reference) speaker and the target speaker.
3 Select the channel(s) you want and adjust to your liking.

Use ‹/› to select the channel.
Use ‹/› to select the frequency and ‹/› to boost or cut the EQ. When you’re finished, go back to the top of the screen and use ‹/› to select the next channel.
- The front speakers can’t be adjusted if you selected FRONT ALIGN.
- The OVER indicator shows in the display if the frequency adjustment is too drastic and might distort. If this happens, bring the level down until OVER disappears from the display.

Tip
- Changing the frequency curve of one channel too drastically will affect the overall balance. If the speaker balance seems uneven, you can raise or lower channel levels using test tones with the TRIM feature. Use ‹/› to select TRIM then use ‹/› to raise or lower the channel level for the current speaker.

4 When you’re finished, press RETURN. You return to the Manual MCACC setup menu.

Checking your Acoustic Calibration EQ settings
After you have completed an automatic or manual Acoustic Calibration EQ adjustment, you can check the ALL CH ADJUST, FRONT ALIGN and custom settings using the on-screen display.
1. Select ‘Manual SP Setup’ then press ENTER.

2. Select the setting you want to adjust. If you are doing this for the first time, you may want to adjust these settings in order:
   - **Speaker Setting** – Specify the size and number of speakers you’ve connected (page 40).
   - **Crossover Network** – Specify which frequencies will be sent to the subwoofer (see Crossover Network below).
   - **Channel Level** – Adjust the overall balance of your speaker system (page 41).
   - **Speaker Distance** – Specify the distance of your speakers from the listening position (page 42).

3. Make the adjustments necessary for each setting, pressing RETURN to confirm after each screen.

**Speaker Setting**
Use this setting to specify your speaker configuration (size, number of speakers). It is a good idea to make sure that the settings made in Automatically setting up for surround sound (MCACC) on page 9 are correct.

**Note**
1. If you select SMALL for the front speakers the subwoofer will automatically be fixed to YES. Also, the center, surround, and surround back speakers can’t be set to LARGE if the front speakers are set to SMALL. In this case, all bass frequencies are sent to the subwoofer.
The System Setup menu

- SB – Select the number of surround back speakers you have (one, two or none). Select LARGE if your surround back speakers reproduce bass frequencies effectively. Select SMALL to send bass frequencies to the other speakers or subwoofer. If you didn’t connect surround back speakers choose NO.¹

- SUB W. – LFE signals and bass frequencies of channels set to SMALL are output from the subwoofer when YES is selected (see notes below). Choose the PLUS setting if you want the subwoofer to output bass sound continuously or you want deeper bass (the bass frequencies that would normally come out the front and center speakers are also routed to the subwoofer). If you did not connect a subwoofer choose NO (the bass frequencies are output from other speakers).

3 When you’re finished, press RETURN. You return to the Manual SP Setup menu.

Tip

- If you have a subwoofer and like lots of bass, it may seem logical to select LARGE for your front speakers and PLUS for the subwoofer. This may, however, yield the best bass results. Depending on the speaker placement of your room you may actually experience a decrease in the amount of bass due to low frequency cancellations. In this case, try changing the position or direction of speakers. If you can’t get good results, listen to the bass response with it set to PLUS and YES or the front speakers set to LARGE and SMALL alternatively and let your ears judge which sounds best. If you’re having problems, the easiest option is to route all the bass sounds to the subwoofer by selecting SMALL for the front speakers.

Crossover Network

- Default setting: 100Hz

This setting decides the cutoff between bass sounds playing back from the speakers selected as LARGE, or the subwoofer, and bass sounds playing back from those selected as SMALL. It also decides where the cutoff will be for bass sounds in the LFE channel.²

1 Select ‘Crossover Network’ from the Manual SP Setup menu.

2 Choose the frequency cutoff point. Frequencies below the cutoff point will be sent to the subwoofer (or LARGE speakers).

3 When you’re finished, press RETURN. You return to the Manual SP Setup menu.

Channel Level

Using the channel level settings, you can adjust the overall balance of your speaker system, an important factor when setting up a home theater system.

Note

¹ If the surround speakers are set to NO, the surround back speakers will automatically be set to NO.
² If you selected Second Zone or Front Bi-Amp (in Surround back speaker setting on page 34) you can’t adjust the surround back settings.
³ If you select one surround back speaker only, make sure that speaker is hooked up to the left surround back terminal.
4 For more on selecting the speaker sizes, see Speaker Setting above.
1. Select ‘Channel Level’ from the Manual SP Setup menu.

2. Select a setup option.
   - Manual – Move the test tone manually from speaker to speaker and adjust individual channel levels.
   - Auto – Adjust channel levels as the test tone moves from speaker to speaker automatically.

3. Confirm your selected setup option. The test tones will start after you press ENTER. After the volume increases to the reference level, test tones will be output.

4. Adjust the level of each channel using +/–. If you selected Manual, use ↑/↓ to switch speakers. The Auto setup will output test tones in the order shown on-screen:

   Adjust the level of each speaker as the test tone is emitted.¹

5. When you’re finished, press RETURN. You return to the Manual SP Setup menu.

   Tip
   - You can change the channel levels at any time by using EFFECT/CH SEL and +/- on the remote control. You can set two channel levels: one for DVD 5.1 CH and one for the listening modes.

Speaker Distance

For good sound depth and separation from your system, you need to specify the distance of your speakers from the listening position. The receiver can then add the proper delay needed for effective surround sound.

1. Select ‘Speaker Distance’ from the Manual SP Setup menu.

2. Adjust the distance of each speaker using +/- You can adjust the distance of each speaker in 0.5 feet increments.

3. When you’re finished, press RETURN. You return to the Manual SP Setup menu.

   Tip
   - For best surround sound, make sure the surround back speakers are the same distance from the listening position.

Note

¹ If you are using a Sound Pressure Level (SPL) meter, take the readings from your main listening position and adjust the level of each speaker to 75 dB SPL (C-weighting/slow reading). The subwoofer test tone is output at low volumes. You may need to adjust the level after testing with an actual soundtrack.
Chapter 8: Using the tuner

Listening to the radio

The following steps show you how to tune in to FM and AM radio broadcasts using the automatic (search) and manual (step) tuning functions. If you already know the frequency of the station you want, see Tuning directly to a station below. Once you are tuned to a station you can memorize the frequency for recall later—see Saving station presets on the next page for more on how to do this.

1 Press FM or AM to select the band.
2 Tune to a station.
   There are three ways to do this:
   - **Automatic tuning**
     To search for stations in the currently selected band, press and hold TUNE ↑/↓ for about a second. The receiver will start searching for the next station, stopping when it has found one. Repeat to search for other stations.
   - **Manual tuning**
     To change the frequency one step at a time, press TUNE ↑/↓.
   - **High speed tuning**
     Press and hold TUNE ↑/↓ for high speed tuning. Release the button at the frequency you want.

Improving FM stereo sound

If the " \((\text{tuned})\) or " \((\text{stereo})\) indicators don't light when tuning to an FM station because the signal is weak, press the MPX button to switch the receiver into mono reception mode. This should improve the sound quality and allow you to enjoy the broadcast.

Tuning directly to a station

Sometimes, you'll already know the frequency of the station you want to listen to. In this case, you can simply enter the frequency directly using the number buttons on the remote control.

1 Press FM or AM to select the band.
2 Press D.ACCESS (Direct Access).
3 Use the number buttons to enter the frequency of the radio station.
   For example, to tune to 106.00 (FM), press 1, 0, 6, 0, 0.
   If you make a mistake halfway through, press D.ACCESS twice to cancel the frequency and start over.

Saving station presets

If you often listen to a particular radio station, it's convenient to have the receiver store the frequency for easy recall whenever you want to listen to that station. This saves the effort of manually tuning in each time. This unit can
Using the tuner

memorize up to 30 stations, stored in three banks, or classes, (A, B and C) of 10 stations each. When saving an FM frequency, the MPX setting (see previous page) is also stored.1

1 Tune to a station you want to memorize. See Listening to the radio on the previous page for more on this.

2 Press T.EDIT (TUNER EDIT). The display shows ST. MEMORY, then a blinking memory class.

3 Press CLASS to select one of the three classes then press ST/left//right to select the station preset you want. You can also use the number buttons or the MULTI JOG dial (front panel) to select a station preset.

4 Press ENTER. After pressing ENTER, the preset class and number stop blinking and the receiver stores the station.

Naming station presets
For easier identification, you can name your station presets.

1 Choose the station preset you want to name. See Listening to station presets below for how to do this.

2 Press T.EDIT (TUNER EDIT). The display shows ST. NAME, then a blinking cursor at the first character position.

3 Input the name you want.
Choose a name up to four characters long.
• Use the MULTI JOG dial (front panel) or the ST/left//right buttons (remote) to select characters.
• Press ENTER to confirm a character. If no character is input, a space is input.

• The name is stored when ENTER is pressed after choosing the fourth character.

Tip
• To erase a station name, simply repeat steps 1-3 and input four spaces instead of a name.
• Once you have named a station preset, you can press DISP when listening to a station to switch the display between name and frequency.

Listening to station presets
You will need to have some presets stored to do this. See Saving station presets above if you haven’t done this already.

1 Press FM, then press CLASS to select the class in which the station is stored. Press repeatedly to cycle through classes A, B and C.

2 Press ST/left//right to select the station preset you want.
• You can also use the number buttons on the remote control to recall the station preset.

Note
If the receiver is left disconnected from the AC power outlet for over a month, the station memories will be lost and will have to be reprogrammed.
Chapter 9:
Making recordings

Making an audio or a video recording
You can make an audio or a video recording from the built-in tuner, or from an audio or video source connected to the receiver (such as a CD player or TV).

Keep in mind you can’t make a digital recording from an analog source or vice-versa, so make sure the components you are recording to/from are hooked up in the same way (see Connecting up on page 12 for more on connections).

If you want to record a video source, you also need to use the same type of connection for the source as for the recorder. For example, you can’t record a component hooked up to S-video jacks with a recorder hooked up to the composite video outputs (see page 16 for more on video connections).

1 Select the source you want to record.
Use the MULTI CONTROL buttons (or INPUT SELECT).

2 Select the input signal (if necessary).
Press SIGNAL SEL to select the input signal corresponding to the source component (see page 33 for more on this).

3 Prepare the source you want to record.
Tune to the radio station, load the CD, video, DVD etc.

4 Prepare the recorder.
Insert a blank tape, MD, video etc. into the recording device and set the recording levels. Refer to the instructions that came with the recorder if you are unsure how to do this. Most video recorders set the audio recording level automatically—check the component’s instruction manual if you’re unsure.

5 Start recording, then start playback of the source component.1

Note
1• The receiver’s volume, balance, tone (bass, treble, loudness), and surround effects have no effect on the recorded signal.
• Some digital sources are copy-protected, and can only be recorded in analog.
• Some video sources are copy-protected. These cannot be recorded.
• Recording from XM Radio is not possible.
Chapter 10: Controlling the rest of your system

Operating other Pioneer components
Many Pioneer components have SR CONTROL jacks which can be used to link components together so that you can use just the remote sensor of one component. When you use a remote control, the control signal is passed along the chain to the appropriate component.¹
Note that if you use this feature, make sure that you also have at least one set of analog audio or video jacks connected to another component for grounding purposes.

Setting the remote to control other components
Most components can be assigned to one of the MULTI CONTROL buttons using the component’s manufacturer preset code stored in the remote. However, please note that there are cases where only certain functions may be controllable after assigning the proper preset code, or the codes for the manufacturer in the remote control will not work for the model that you are using.²

Note
- You can cancel or exit any of the steps by pressing RECEIVER. To go back a step, press RETURN.
- After one minute of inactivity, the remote automatically exits the operation.

¹ If you want to control all your components using this receiver’s remote control, refer to Controlling the rest of your system on page 46.
² If you have connected a remote control to the CONTROL IN jack (using a mini-plug cable), you won’t be able to control this unit using the remote sensor.
² TV codes (for example, codes for TV, CATV, Satellite TV or DTV) can only be assigned to the TV/SAT or TV CTRL button.
² If you assign the FM or AM function to another component, you will have to reassign it to the Pioneer preset code to use this receiver’s built-in tuner.

Note
Controlling the rest of your system

Selecting preset codes directly

1 While pressing the RECEIVER button, press and hold the SETUP button.
   The remote LCD display shows SETUP.
2 Use ↑/↓ to select PRESET then press ENTER.
3 Press the MULTI CONTROL button for the component you want to control then press ENTER.
   The LCD on the remote displays the component you want to control.
4 Use ↑/↓ to select the first letter of the brand name of your component then press ENTER.
   This should be the manufacturer’s name (for example, P for Pioneer).
5 Use ↑/↓ to select the manufacturer’s name from the list then press ENTER.
6 Use ↑/↓ to select the proper code from the list, then try using this remote control with your component.
   The code should start with the component type (for example, DVD 009). If there is more than one, start with the first one.
   To try out the remote control, switch the component on or off (into standby) by pressing SOURCE 0. If it doesn’t seem to work, select the next code from the list (if there is one).
7 If your component is controlled successfully, press ENTER to confirm.
   The remote LCD display shows OK.

Erasing one of the remote control button settings

This erases a control assigned to one of the buttons and restores it to the factory default.

1 While pressing the RECEIVER button, press and hold the SETUP button.
   The remote LCD display shows SETUP.
2 Use ↑/↓ to select ERASE then press ENTER.
3 Press the MULTI CONTROL button corresponding to the button setting to be erased then press ENTER.
   The LCD on the remote displays the component.
4 Press and hold the button to be erased for two seconds.
   The LCD display shows OK or NO CODE to confirm the button has been erased.
5 Repeat step 4 to erase other buttons.
6 Press the RECEIVER button when you’re done.

Erasing all of the remote control presets

This will erase all preset remote control preset codes.

1 While pressing the RECEIVER button, press and hold the SETUP button.
   The remote LCD display shows SETUP.
2 Use ↑/↓ to select RESET then press ENTER.

Note

1 You can’t assign the RECEIVER button.
10 Controlling the rest of your system

3 Press and hold ENTER for about two seconds.
The LCD shows OK to confirm the remote presets have been erased.

Direct function
- Default setting: ON
You can use the direct function feature to control one component using the remote control while at the same time, using your receiver to playback a different component. This could let you, for example, use the remote control to set up and listen to a CD on the receiver and then use the remote control to rewind a tape in your VCR while you continue to listen to your CD player.

When direct function is on, any component you select (using the MULTI CONTROL buttons) will be selected by both the receiver and the remote control. When you turn direct function off, you can operate the remote control without affecting the receiver.\(^1\)

1 While pressing the RECEIVER button, press and hold the SETUP button.
The remote LCD display shows SETUP.
2 Use ↑/↓ to select DIRECT then press ENTER.
3 Press the MULTI CONTROL button for the component you want to control then press ENTER.
The LCD on the remote displays the component you want to control.
4 Use ↑/↓ to switch direct function ON or OFF then press ENTER.
The LCD shows OK to confirm the setting.

Confirming preset codes
Use this feature to check which preset code is assigned to a MULTI CONTROL button.
1 While pressing the RECEIVER button, press and hold the SETUP button.
The remote LCD display shows SETUP.
2 Use ↑/↓ to select READ ID then press ENTER.
3 Press the MULTI CONTROL button of the component for which you want to check the preset code.
The brand name and preset code appears in the display for three seconds.

Note
1 You can’t use direct function with the TV CTRL function.
Controlling the rest of your system

Controls for TVs
This remote control can control components after entering the proper codes or teaching the receiver the commands (see Operating other Pioneer components on page 46 for more on this). Use the MULTI CONTROL buttons to select the component.

- The TV CONTROL buttons on the remote control are dedicated to control the TV assigned to the TV CTRL button. If you have two TVs, assign the main TV to the TV CTRL button.

Chapter 11: Other connections

**Caution**

- Before making or changing the connections, switch off the power and disconnect the power cord from the power outlet. Plugging in components should be the last connection you make with your system.
- Do not allow any contact between speaker wires from different terminals.
- You can use speakers with a nominal impedance between 6–16Ω (please see Switching the speaker impedance on page 63 if you plan to use speakers with an impedance of less than 8Ω).

**Using XM Radio**

XM is the leading provider of satellite radio service in the United States. Through two high-power satellites, Rock and Roll, XM Radio service offers over 150 channels of music, news, talk, sports and children’s programming on a monthly subscription basis. XM Radio offers consumers clear sound quality from digital signal radios, an extensive variety of programming and nationwide coverage. Visit www.xmradio.com for more details on this service.

**Connecting your XM Radio receiver**

After purchasing a Connect-and-Play™ antenna (sold separately), you will also need to activate the XM Radio digital radio service to receive broadcasts.¹

1. Connect an XM Radio Connect-and-Play™ antenna to the XM Radio jack on the rear of this receiver.
   You will also need to activate the XM Radio service.
2. Press XM RADIO (SHIFT+AM) to switch to the XM RADIO input.
   For best reception, you may need to move the Connect-and-Play™ antenna near a window (the southernmost window should produce the best results).
   - If after pressing XM RADIO the display shows Check Antenna, try disconnecting the antenna and reconnecting.

---

¹ Hardware and required basic monthly subscription sold separately. Premium Channel available at additional monthly cost. Installation costs and other fees and taxes, including a one-time activation fee may apply. Subscription fee is consumer only. All fees and programming subject to change. Channels with frequent explicit language are indicated with an XL. Channel blocking is available for XM radio receivers by calling 1-800-XMRADIO. Subscriptions subject to Customer Agreement available at xmradio.com. Only available in the 48 contiguous United States.
Listening to XM Radio
After connecting, you will be able to use this receiver to select channels and navigate categories using the on-screen display. The information displayed is as follows:

- Selecting channels and browsing by genre
From the XM Channel Guide, you can browse XM Radio channels in the order that they appear, or you can narrow your channel search by genre.

- Use ↑/↓ to display the XM Channel Guide screen, then use the ↑/↓/←/→ buttons followed by ENTER to select a channel to listen to the XM radio broadcast.
  - To browse by genre, first press CATEGORY, use ↑/↓/←/→ to select a genre then press ENTER.
  - To cancel and exit any time, press RETURN.

Tip
- You can select channels directly by pressing D.ACCESS then the three-digit channel number.

• You can press DISP to change XM Radio information in the front panel display.
• The currently selected channel is automatically chosen (without pressing ENTER) after 5 seconds.

Using XM Surround
XM Surround uses Neural Surround™ technology to achieve optimal surround sound from XM radio.

• While listening to XM Radio, press AUTO SURR for XM Surround listening. See About Neural Surround™ below for more on this.

About Neural Surround™
Neural Surround™ represents the latest advancement in surround technology and has been adopted by XM Satellite Radio for digital radio broadcasts of surround recordings and live events.

Neural Surround™ employs psychoacoustic frequency domain processing which allows delivery of a more detailed sound stage with superior localization of surround elements. System playback is scalable from stereo up to state-of-the-art multichannel surround.

Neural Surround™ is trademark owned by Neural Audio Corporation.

Saving channel presets
This receiver can memorize up to 30 channels, stored in three banks, or classes, (A, B and C) of 10 stations each.

1 Select the channel you want to memorize. See Selecting channels and browsing by genre above.

2 Press T.EDIT. The display shows a blinking memory class.

Note
1. It’s easiest if you have your TV switched on to take advantage of the OGDs. You can, however, use just the front panel display to do everything if you prefer.
2. Select XM000 (RADIO ID) from the on-screen display to check the Radio ID of the Connect-and-Play antenna.
Other connections

3 Press CLASS to select one of the three classes then press ↔/↑↓ to select the channel preset you want.
You can also use the number buttons to select a preset.
  • The default for all presets is XM001.
4 Press ENTER.
   After pressing ENTER, the preset class and number stop blinking and the receiver stores the XM channel.

Listening to channel presets
You will need to have some presets stored to do this.
1 Press CLASS to select the class in which the channel is stored.
   Press repeatedly to cycle through classes A, B and C.
2 Press ↔/↑↓ to select the channel preset you want.
   • You can also use the number buttons on the remote control to recall the channel preset.

Switching the speaker system
If you selected Second Zone in Surround back speaker setting on page 34, three speaker system settings are possible using the SPEAKERS button. If you selected Normal (SB) or Front Bi-Amp, the speaker system is fixed as SP>A or SP>AB (respectively). The options below are for the Second Zone setting only.1

• Use the SPEAKERS button on the front panel to select a speaker system setting.

1 Connect a pair of speakers to the surround back speaker terminals on the rear panel.
   Connect the same way you connected your speakers in Connecting the speakers on page 19. Make sure to review Hints on speaker placement on page 20 when placing the speakers in another room.
2 Select ‘Second Zone’ from the ‘Surr Back System’ menu.
   See Surround back speaker setting on page 34 to do this.

Press repeatedly to choose a speaker system option:
  • SP>A – Sound is output from the speakers connected to the A speaker terminals (multichannel playback is possible).
  • SP>B – Sound is output from the two speakers connected to speaker system B (only stereo playback is possible).

Note
1  The subwoofer output depends on the settings you made in Speaker Setting on page 40. However, if SP>B is selected above, no sound is heard from the subwoofer (the LFE channel is not downmixed).
2  Depending on the Surround back speaker setting on page 34 output from the surround back pre-out terminals may change.
3  All speaker systems (except Second Zone connections) are switched off when headphones are connected.
Other connections

- **SP ► AB** – Sound is output from speaker system A (up to 5 channels, depending on the source), the two speakers in speaker system B, and the subwoofer. Multichannel sources (heard through speaker system A) are downmixed for stereo output from speaker system B.

### Bi-amping your front speakers

Bi-amping is when you connect the high frequency driver and low frequency driver of your speakers to different amplifiers (in this case, to both front and surround back terminals) for better crossover performance. Your speakers must be bi-ampable to do this (having separate terminals for high and low) and the sound improvement will depend on the kind of speakers you’re using.

1. **Connect your speakers as shown below.**
   This illustration below shows the connections for bi-amping your front left speaker. Hook up your front right speaker in the same way.

   ![Front left speaker diagram]

   Since both front and surround back speaker terminals output the same audio, it doesn’t matter which set (front or surround back) is powering which part (Hi or Low) of the speaker.

   - Make sure that the +/− connections are properly inserted.

2. **Select the ‘Front Bi-Amp’ setting from the ‘Surr Back System’ menu.**
   See [Surround back speaker setting](#) on page 34 to specify how you’re using the surround back speaker terminals.

### Caution

- Most speakers with both Hi and Low terminals have two metal plates that connect the Hi to the Low terminals. These must be removed when you are bi-amping the speakers or you could severely damage the amplifier. See your speaker manual for more information.

- If your speakers have a removable crossover network, make sure you do not remove it for bi-amping. Doing so may damage your speakers.

### Bi-wiring your speakers

The reasons for bi-wiring are basically the same as bi-amping, but additionally, interference effects within the wire could be reduced, producing better sound. Again, to do this your speakers must be bi-wireable (that is they must have separate terminals for the high and low frequencies). When bi-wiring, make sure you’ve selected Normal (SB) or Second Zone in [Surround back speaker setting](#) on page 34.

- To bi-wire a speaker, connect two speaker cords to the speaker terminal on the receiver. Using a banana plug for the second connection is recommended.
Caution

- Make sure you use a parallel (not series, which are fairly uncommon) connection when bi-wiring your speakers.
- Don’t connect different speakers from the same terminal in this way.

Connecting additional amplifiers

This receiver has more than enough power for any home use, but it’s possible to add additional amplifiers to every channel of your system using the pre-outs. Make the connections shown below to add amplifiers to power your speakers.

- Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

Using this receiver with a Pioneer plasma display

If you have a Pioneer plasma display, you can use an SR+ cable to connect it to this unit and take advantage of various convenient features, such as automatic video input switching of the plasma display when the input is changed.

Note

- You can use the additional amplifier on the surround back channel pre-outs for a single speaker as well. In this case plug the amplifier into the left (L Single) terminal only.
- The sound you hear from the surround back terminals depends on the Surround back speaker setting on page 34.
- To hear sound only from the pre-outs, simply disconnect any speakers that are connected directly to the receiver.
- If you’re not using a subwoofer, change the front speaker setting (see Speaker Setting on page 40) to large.
- This receiver is compatible with all Pioneer plasma displays from 2003 onward.
Other connections

- Use a 3-ringed miniplug SR+ cable to connect the CONTROL IN jack of this receiver with the CONTROL OUT of your plasma display.

Before you can use the extra SR+ features, you need to make a few settings in the receiver. See SR+ Setup for Pioneer plasma displays on page 60 for detailed instructions.

To make the most of the SR+ features, you should connect your source components (DVD player, etc.) in a slightly different way to that described in this chapter. For each component, connect the video output directly to the plasma display, and just connect the audio (analog and/or digital) to this receiver.

Using the SR+ mode with a Pioneer plasma display

When connected using an SR+ cable, a number of features become available to make using this receiver with your Pioneer plasma display even easier. These features include:
- On-screen volume display.
- On-screen display of listening mode.
- Automatic video input switching on the plasma display.
- Automatic volume muting on the plasma display.

See also SR+ Setup for Pioneer plasma displays on page 60 for more on setting up the receiver.

1 Make sure that the plasma display and this receiver are switched on and that they are connected with the SR+ cable.

See Using this receiver with a Pioneer plasma display above for more on this.

2 To switch SR+ mode on/off, press RECEIVER, then the SR+ button.

The front panel display shows SR+ ON or OFF.

Note
1. The 3-ringed SR+ cable from Pioneer is commercially available under the part number ADE7095. Contact the Pioneer Customer Support division for more information on obtaining an SR+ cable (you can also use a commercially available 3-ringed mini phone plug for the connection).
2. If you connect to a Pioneer plasma display using an SR+ cable, you will need to point the remote control at the plasma display remote sensor to control the receiver. In this case, you won’t be able to control the receiver using the remote control if you switch the plasma display off.

The automatic volume muting feature is enabled separately; see SR+ Setup for Pioneer plasma displays on page 60.
# Chapter 12: Other Settings

## The Input Assign menu

You only need to make settings in the Input Assign menu if you didn’t hook up your digital equipment according to the default settings for the digital inputs, or if you have connected equipment using component video cables.

1. Press RECEIVER on the remote control, then press the SETUP button. An on-screen display (OSD) appears on your TV. Use arrow buttons and ENTER on the remote control to navigate through the screens and select menu items. Press RETURN to confirm and exit the current menu.

2. Select ‘Input Assign’ from the System Setup menu.

### Assigning the digital inputs

- Default settings:
  - Coaxial - 1 – DVD
  - Coaxial - 2 – DVR
  - Optical - 1 – CD
  - Optical - 2 – TV

You only need to do this if you didn’t hook up your digital equipment according to the default settings for the digital inputs (see above). This setting tells the receiver what digital equipment is hooked up to which terminal so the buttons on the remote correspond to what you have hooked up.

2. Select the number of the digital input to which you’ve connected the digital component. The numbers correspond with the numbers beside the inputs on the back of the receiver.

3. Select the component that corresponds with the one you connected to that input. Select between DVD, TV, CD, CD-R, DVR or OFF.

- Use arrow buttons and ENTER to do this.
- If you assign a digital input to a certain function (for example, DVD/LD) then any digital inputs previously assigned to that function will automatically be switched off.

4. When you’re finished, press RETURN. You return to the Input Assign menu.

### Assigning the component video inputs

- Default settings:
  - Component 1 – DVD
  - Component 2 – TV
  - Component 3 – DVR

If you used component video cords to connect your video equipment you must tell the receiver which device it is, or else you may see the S-video or composite video input instead of the component video signal. For more on this, see Using the component video jacks on page 17.

1. Select ‘Component Input’ from the Input Assign menu.
Other Settings

2 Select the number of the component video input to which you’ve connected your video component. The numbers correspond with the numbers beside the inputs on the back of the receiver.

3 Select the component that corresponds with the one you connected to that input. Select between DVD, TV, DVR or OFF.
   • Use ×/× and ENTER to do this.
   • Make sure you have connected the audio from the component to the corresponding inputs on the rear of the receiver.
   • If you connect any source component to the receiver using a component video input, you should also have your TV connected to this receiver's component video MONITOR output.

4 When you're finished, press RETURN. You return to the Input Assign menu.

The Other Setup menu
The Other Setup menu is where you can make customized settings to reflect how you are using the receiver.

1 Press RECEIVER on the remote control, then press the SETUP button.
   An on-screen display (OSD) appears on your TV. Use ×/× and ENTER on the remote control to navigate through the screens and select menu items. Press RETURN to confirm and exit the current menu.

2 Select ‘Other Setup’ then press ENTER.

3 Select the setting you want to adjust.
   If you are doing this for the first time, you may want to adjust these settings in order:
   • DRC Setup – Specify the amount of dynamic range adjustment to Dolby Digital soundtracks (see Dynamic Range Control Setup below).
   • Dual Mono Setup – Isolate one channel when listening to discs with dual mono encoding (see Dual Mono Setup below).
   • LFE ATT Setup – Choose the attenuator level for the LFE channel (LFE Attenuator Setup on page 60).
   • SR+ Setup – Specify how you want to control your Pioneer plasma display (SR+ Setup for Pioneer plasma displays on page 60).

4 Make the adjustments necessary for each setting, pressing RETURN to confirm after each screen.

Dynamic Range Control Setup
• Default setting: OFF
This setting specifies the amount of dynamic range adjustment to Dolby Digital and DTS movie soundtracks. You may want to use this when listening to surround sound at low volumes.

1 Select ‘DRC Setup’ from the Other Setup menu.

2 Choose the setting that you want.
   • MAX – Dynamic range is reduced (loud sounds are reduced in volume while quieter sounds are increased).
   • MID – Mid setting.
   • OFF – No dynamic range adjustment (use when listening at higher volume).

3 When you’re finished, press RETURN. You return to the Other Setup menu.
Other Settings

Dual Mono Setup

- Default setting: CH1

You can specify how dual mono encoded Dolby Digital and DTS soundtracks should be played. Dual mono is not widely used, but is sometimes necessary when two languages need to be sent to separate channels.

1. Select ‘Dual Mono Setup’ from the Other Setup menu.

2. Choose the setting that you want.
   - CH2 – Only channel 2 is played
   - CH1 CH2 – Both channels are played through the front speakers
   - CH1 – Only channel 1 is played

3. When you’re finished, press RETURN. You return to the Other Setup menu.

LFE Attenuator Setup

- Default setting: ATT 0 dB

Some Dolby Digital and DTS audio sources include ultra-low bass tones. Set the LFE attenuator as necessary to prevent the ultra-low bass tones from distorting the sound from the speakers.

1. Select ‘LFE ATT Setup’ from the Other Setup menu.

2. Choose the setting that you want.
   - ATT 0 dB – No limiting (recommended)
   - ATT 10 dB – 10 dB of limiting
   - LFE OFF – No sound from LFE channel

3. When you’re finished, press RETURN. You return to the Other Setup menu.

SR+ Setup for Pioneer plasma displays

Make the following settings if you have connected a Pioneer plasma display to this receiver using an SR+ cable. Note that the number of settings available will depend on the plasma display you’ve connected.

See also Using this receiver with a Pioneer plasma display on page 56.

1. Select ‘SR+ Setup’ from the Other Setup menu.

2. Select the ‘PDP Volume Control’ setting you want.
   - OFF – The receiver does not control the volume of the plasma display
   - ON – When the receiver is switched to one of the inputs that use the plasma display (DVD/LD, or another function below), the volume on the plasma display is muted so only sound from the receiver is heard.

3. Assign any input source connected to the plasma display to the corresponding input number.

   - The Monitor Out Connect should be set to the input that you’ve used to connect this receiver to your plasma display.

4. When you’re finished, press RETURN. You return to the Other Setup menu.
Chapter 13: Additional information

Troubleshooting

Incorrect operations are often mistaken for trouble and malfunctions. If you think that there is something wrong with this component, check the points below. Take a look at the other components and electrical appliances being used, because sometimes the problem may lie there. If the trouble isn’t sorted out even after going through the checks below, ask your nearest Pioneer authorized independent service company to carry out repair work.

- If the unit does not operate normally due to external effects such as static electricity disconnect the power plug from the outlet and insert again to return to normal operating conditions.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The power does not turn on.</td>
<td>• Disconnect the power plug from the outlet, and insert again.</td>
</tr>
<tr>
<td>• Make sure there are no loose strands of speaker wire touching the rear panel. This could cause the receiver to shut off automatically.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Problem</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The receiver suddenly switches off and the power indicator blinks.</td>
<td>• After about a minute (you won’t be able to switch the unit on during this time), switch the receiver back on. If the message persists, call a Pioneer authorized independent service company.</td>
</tr>
</tbody>
</table>

<table>

### Problem | Remedy
--- | ---
Considerable noise in radio broadcasts. | • Connect the antenna (page 18) and adjust the position for best reception.  
• Route any loose cables away from the antenna terminals and wires.  
• Fully extend the FM wire antenna, position for best reception, and secure to a wall (or connect an outdoor FM antenna).  
• Connect an additional internal or external AM antenna (page 18).  
• Turn off equipment causing interference or move it away from the receiver (or move antennas farther away from equipment causing noise).

Broadcast stations cannot be selected automatically. | • Connect an outdoor antenna (refer to page 18).

Noise during playback of a cassette deck. | • Move the cassette deck away from your receiver, until the noise disappears.

Sound is produced from other components, but not from LD or DVD player. | • Set the SIGNAL SELECT to AUTO, DIGITAL or ANALOG according to the type of connections made (refer to page 33).  
• Set the digital input settings correctly (refer to page 58).  
• Make digital connections (refer to page 13) and set the SIGNAL SELECT to DIGITAL (refer to page 33).  
• Refer to the instruction manual supplied with the DVD player.

No sound is output or a noise is output when software with DTS is played back. | • Set the digital volume level of the player to full, or to the neutral position.  
• Make sure the player’s settings are correct and/or the DTS signal out is on. Refer to the instruction manual supplied with the DVD player.  
• Set the input signal type to DIGITAL (see Choosing the input signal on page 33).

During a playback search, noise is output from a DTS compatible CD player. | • This is not a malfunction, but be sure to turn the volume down to prevent the output of loud noise from your speakers.

Everything seems to be set up correctly, but the playback sound is odd. | Check that the positive/negative speaker terminals on the receiver are matched with the corresponding terminals on the speakers (see Connecting the speakers on page 19).

There seems to be a time lag between the speakers and the output of the subwoofer. | • See Automatically setting up for surround sound (MCACC) on page 9 to set up your system again using MCACC (this will automatically compensate for a delay in the subwoofer output).

After using the Auto MCACC Setup, the speaker size setting (LARGE or SMALL) is incorrect. | • Low-frequency noise could have been caused by an air conditioner or motor. Switch off all appliances in the room and rerun the Auto MCACC Setup.

Can’t operate the remote control. | • Replace the batteries (refer to page 6).  
• Operate within 23 ft. (7 m), 30° of the remote sensor (refer to page 27).  
• Remove the obstacle or operate from another position.  
• Avoid exposing the remote sensor on the front panel to direct light.  
• Unplug anything connected to the CONTROL IN jack and use remote normally (see Operating other Pioneer components on page 46).

The SR cable is connected, but the connected components can’t be operated with the remote. | • Reinsert the SR cable, making sure it’s connected to the right jack (see Using this receiver with a Pioneer plasma display on page 56).  
• Make sure an analog connection has been made between the units.  
• This feature only works with Pioneer products.

The display is dark or off. | • Press DIMMER on the control repeatedly to return to the default.

The System Setup screen doesn’t appear. | • When the receiver is in standby, switch to BURST.OFF by holding down ACoustiC EQ (front panel) and pressing STANDBY/ON (the current setting is displayed).

Specifications

Amplifier section

- Continuous power output (stereo)
  Front: 110 W (20 to 20 000 Hz, THD 0.7 %, 8 Ω)

- Continuous power output (surround)
  Front: 110 W per channel (1 kHz, 1.0 %, 8 Ω)
  Center: 110 W (1 kHz, 1.0 %, 8 Ω)
  Surround: 110 W per channel (1 kHz, 1.0 %, 8 Ω)
  Surround Back: 110 W per channel (1 kHz, 1.0 %, 8 Ω)

Audio section

- Input (Sensitivity/Impedance)
  CD, DVR/VCR, CD-R/TAPE/MD, DVD/LD, TV/SAT: 200 mV/47 kΩ

- Frequency response
  CD, DVR/VCR, CD-R/TAPE/MD, DVD/LD, TV/SAT: 5 Hz to 100 000 Hz  dB

- Output (Level/Impedance)
  DVR/VCR REC, CD-R/TAPE/MD REC: 200 mV/2.2 kΩ

- Tone control
  Bass: ± 6 dB (100 Hz)
  Treble: ± 6 dB (10 kHz)
  Loudness: +10 dB/+5 dB (100 Hz/10 kHz)
  (at volume level –50 dB)

- Signal-to-Noise Ratio (IHF, short circuited, A network)
  CD, DVR/VCR, CD-R/TAPE/MD, DVD/LD, TV/SAT: 96 dB

- Signal-to-Noise Ratio [EIA, at 1 W (1 kHz)]
  CD, DVR/VCR, CD-R/TAPE/MD, DVD/LD, TV/SAT: 79 dB

Video Section

- Input (Sensitivity/Impedance)
  DVR/VCR, DVD/LD, TV/SAT: 1 Vp-p/75 Ω

- Output (Level/Impedance)
  DVR/VCR, MONITOR OUT: 1 Vp-p/75 Ω

- Frequency response
  DVR/VCR, DVD/LD,
  TV/SAT ⇒ MONITOR: 0.5 Hz to 7 MHz  dB
  Signal-to-Noise Ratio: 85 dB
  Crosstalk: 50 dB

Component Video Section

- Input (Sensitivity)
  DVR/LD, TV/SAT, DVR/VCR: 1 Vp-p/75 Ω

- Frequency response
  DVR/VCR, DVD/LD,
  TV/SAT: 0.5 Hz to 7 MHz  dB

- Tone control
  Bass: ± 6 dB (100 Hz)
  Treble: ± 6 dB (10 kHz)
  Loudness: +10 dB/+5 dB (100 Hz/10 kHz)
  (at volume level –50 dB)

- Signal-to-Noise Ratio
  DVD/LD, TV/SAT, DVR/VCR: 60 dB

FM Tuner Section

- Frequency Range
  87.5 MHz to 108 MHz

- Usable Sensitivity
  Mono: 13.2 dBf, IHF (1.3 μV/75 Ω)

- 50 dB Quieting Sensitivity
  Mono: 20.2 dB
  Stereo: 38.6 dBf

- Signal-to-Noise Ratio
  Mono: 73 dB (at 85 dBf)
  Stereo: 70 dB (at 85 dBf)

- Distortion
  Stereo: 0.5 % (1 kHz)
  Alternate Channel Selectivity: 60 dB
  (400 kHz)

- Stereo Separation
  40 dB (1 kHz)

- Frequency Response
  30 Hz to 15 kHz

- Antenna Input (DIN)
  75 Ω unbalanced

Note

* Continuous average power output of 110 watts* per channel, min., at 8ohms, from 20 Hz to 20 000 Hz with no more than 0.7 %** total harmonic distortion (front).

* Measured pursuant to the Federal Trade Commission’s Trade Regulation rule on Power Output Claims for Amplifiers.

** Measured by Audio Spectrum Analyzer.
**Additional information**

**AM Tuner Section**
- Frequency Range: 530 kHz to 1700 kHz
- Sensitivity (IHF, Loop antenna): 350 µV/m
- Signal-to-Noise Ratio: 50 dB
- Antenna: Loop antenna

**Miscellaneous**
- Power requirements: AC 120V / 60Hz
- Power consumption: 370 W / 480 VA
  - In standby: 0.5 W
- Dimensions: 420 (W) mm x 158 (H) mm x 352.5 (D) mm
- Weight (without package): 20.3 lb (9.2 kg)

**Furnished Parts**
- Microphone (for Auto MCACC setup): 1
- Dry cell batteries (AA size IEC R6): 2
- Remote control: 1
- AM loop antenna: 1
- FM wire antenna: 1
- These operating instructions

**Note**
- Specifications and the design are subject to possible modifications without notice, due to improvements.

**Cleaning the unit**
- Use a polishing cloth or dry cloth to wipe off dust and dirt.
- When the surface is dirty, wipe with a soft cloth dipped in some neutral cleanser diluted five or six times with water, and wrung out well, and then wipe again with a dry cloth. Do not use furniture wax or cleansers.
- Never use thinners, benzine, insecticide sprays or other chemicals on or near this unit, since these will corrode the surface.

**Power cord caution**
- Handle the power cord by the plug. Do not pull out the plug by tugging the cord and never touch the power cord when your hands are wet as this could cause a short circuit or an electric shock. Do not place the unit, a piece of furniture, etc., on the power cord, or pinch the cord. Never make a knot in the cord or tie it with other cords. The power cords should be routed such that they are not likely to be stepped on. A damaged power cord can cause a fire or give you an electrical shock. Check the power cord once in a while. When you find it damaged, ask your nearest Pioneer authorized service center or your dealer for a replacement.
Selecting fine audio equipment such as the unit you've just purchased is only the start of your musical enjoyment. Now it's time to consider how you can maximize the fun and excitement your equipment offers. This manufacturer and the Electronic Industries Association's Consumer Electronics Group want you to get the most out of your equipment by playing it at a safe level. One that lets the sound come through loud and clear without annoying blaring or distortion—and, most importantly, without affecting your sensitive hearing.

Sound can be deceiving. Over time your hearing "comfort level" adapts to higher volumes of sound. So what sounds "normal" can actually be loud and harmful to your hearing. Guard against this by setting your equipment at a safe level BEFORE your hearing adapts.

To establish a safe level:
• Start your volume control at a low setting.
• Slowly increase the sound until you can hear it comfortably and clearly, and without distortion.

Once you have established a comfortable sound level:
• Set the dial and leave it there.

Taking a minute to do this now will help to prevent hearing damage or loss in the future. After all, we want you listening for a lifetime.

We Want You Listening For A Lifetime

Used wisely, your new sound equipment will provide a lifetime of fun and enjoyment. Since hearing damage from loud noise is often undetectable until it is too late, this manufacturer and the Electronic Industries Association’s Consumer Electronics Group recommend you avoid prolonged exposure to excessive noise. This list of sound levels is included for your protection.

<table>
<thead>
<tr>
<th>Decibel Level</th>
<th>Example</th>
</tr>

PIONEER ELECTRONICS (USA) INC.  PIONEER ELECTRONICS OF CANADA, INC.

LIMITED WARRANTY

WARRANTY VALID ONLY IN COUNTRY OF PRODUCT PURCHASE

Pioneer Electronics (USA) Inc. (PUSA), and Pioneer Electronics Of Canada, Inc. (POC), warrant that products distributed by PUSA in the U.S.A., and by POC in Canada that fails to function properly due to defects in workmanship or material will be repaired or replaced at no additional charge for parts or labor, as described below. This warranty does not apply if the failure was caused by damage occurring while in the possession of anyone other than Pioneer as specified below or due to any other cause . The warranty period is 90 Days for products rented in the U.S.A. and 90 Days for products rented in Canada. The warranty period for products sold in the U.S.A. is 1 Year. In Canada - 1 Year.

WHAT IS COVERED

PIONEER WARRANTY APPLIES TO THE ORIGINAL OR ANY SUBSEQUENT OWNER OF THIS PRODUCT DURING THE WARRANTY PERIOD PROVIDED THE PRODUCT WAS PURCHASED FROM AN AUTHORIZED PIONEER DISTRIBUTOR/DEALER IN THE U.S.A. OR CANADA, YOU WILL BE REQUIRED TO PROVIDE A SALES RECEIPT OR OTHER VALID PROOF OF PURCHASE SHOWING THE DATE OF ORIGINAL PURCHASE OR, IF RENTED, YOUR RENTAL CONTRACT SHOWING THE PLACE AND DATE OF ORIGINAL PURCHASE. IF SHIPPING THE UNIT YOU WILL NEED TO PACKAGE PROPERLY UNDER NORMAL USE DUE TO A MANUFACTURING DEFECT WHEN INSTALLED AND OPERATED ACCORDING TO THE OWNER'S MANUAL ENCLOSED WITH THE UNIT WILL BE REPAIRED OR REPLACED WITHOUT CHARGE TO THE OWNER FOR PARTS OR LABOR.

PRODUCT WARRANTY PERIOD

Home Audio and Video .............................................. 1 Year 1 Year
Microphones, Headphones, Phone Cartridges and Styluses ................................................................. 90 Days 90 Days
Shorter limited warranty periods apply to some models. Please refer to the limited warranty document enclosed with the product for a definitive statement of the warranty period.

IN THE U.S.A.

- IN THE U.S.A. - Please be sure to return this page to us with your completed PRODUCT WARRANTY REGISTRATION CARD or write to:

Pioneer Electronics (USA) Inc. 
Home Audio and Video 
PRODUCT WARRANTY REGISTRATION CARD 
P.O. Box 1760 
LONG BEACH, CALIFORNIA 90801

- IN CANADA - Call the Customer Satisfaction Manager at 1-877-283-5901 to discuss your complaint and to obtain a prompt resolution.

- Following our response to any initial request to Customer Support, should a dispute arise between you and Pioneer, Pioneer makes available its Complaint Resolution Program to resolve the dispute. The Complaint Resolution Program is available to you without charge. You are required to use the Complaint Resolution Program before you exercise any rights under, or seek any remedies, created by Title I of the Magnuson-Moss Warranty-Federal Trade Commission Improvement Act, 15 U.S.C. 2301 et seq.

- To use the Complaint Resolution Program call 1-800-421-1404 and explain to the customer service representative the problem you are experiencing, if you have taken to have the product repaired during the warranty period and the name of this authorized distributor/dealer from whom the product was purchased. If the complaint has been explained to the representative, a resolution number will be issued. Within 45 days of receiving your complaint, Pioneer will investigate the dispute and either (1) respond to your complaint or writing informing you what action Pioneer will take, and in what time period, to resolve the dispute, or (2) respond to your complaint in writing informing you what action Pioneer will take, and in what time period, to resolve the dispute.

- DISPUTE RESOLUTION

IN THE U.S.A. - For additional protection under this warranty, please call or write:
