AUDIO/VIDEO MULTI-CHANNEL RECEIVER

VSX-53TX

ELITE

Operating Instructions
Thank you for buying this Pioneer product. Please read through these operating instructions so you will know how to operate your model properly. After you have finished reading the instructions, put them away in a safe place for future reference.

IMPORTANT NOTICE
The serial number for this equipment is located in the rear panel. Please write this serial number on your enclosed warranty card and keep it in a secure area. This is for your security.

Information to User
Alteration or modifications carried out without appropriate authorization may invalidate the user's right to operate the equipment.

POWER-CORD CAUTION
Handle the power cord by the plug. Do not pull out the plug by tugging the cord and never touch the power cord when your hands are wet as this could cause a short circuit or electric shock. Do not place the unit, a piece of furniture, etc., on the power cord, or pinch the cord. Never make a knot in the cord or tie it with other cords. The power cords should be routed such that they are not likely to be stepped on. A damaged power cord can cause a fire or give you an electrical shock. Check the power cord once in a while. When you find it damaged, ask your nearest PIONEER authorized service center or your dealer for a replacement.

WARNING: THE APPARATUS IS NOT WATERPROOFED, TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE AND DO NOT PUT ANY WATER SOURCE NEAR THIS APPARATUS, SUCH AS VASE, FLOWER POT, COSMETICS CONTAINER AND MEDICINE BOTTLE ETC.

[For U.S. model]

ENERGY STAR® and the ENERGY STAR certification mark are registered US marks.

This product is for general household purposes. Any failure due to use for other than household purposes (such as long-term use for business purposes in a restaurant or use in a car or ship) and which requires repair will be charged for even during the warranty period.

If the socket outlets on the associated equipment are not suitable for the plug supplied with the product, the plug must be removed and an appropriate one fitted. Replacement and mounting of an AC plug on the power supply cord of this unit should be performed only by qualified service personnel. The cut-off plug must be disposed of as an electrical shock hazard could exist if connected to a socket outlet.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

[For Canadian model]
CAUTION: TO PREVENT ELECTRIC SHOCK, DO NOT USE THIS (POLARIZED) PLUG WITH AN EXTENSION CORD, RECEPTACLE OR OTHER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.

ATTENTION: POUR PREVENIR LES CHOC ELECTRIQUES NE PAS UTILISER CETTE FICHE POLARISEE AVEC UN PROLONGATEUR UNE PRISE DE COURANT OU UNE AUTRE SORTIE DE COURANT, SAUF SILES LAMES PEUVENT ETRE INSEREES A FOND SANS EN LAISSER AUCUNE PARTIE A DECOUVERT.

[For Canadian model]
This Class B digital apparatus complies with Canadian ICES-003.

[Pour le modèle Canadien]
Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

CAUTION: This product satisfies FCC regulations when shielded cables and connectors are used to connect the unit to other equipment. To prevent electromagnetic interference with electric appliances such as radios and televisions, use shielded cables and connectors for connections.

WARNING: Handling the cord on this product or cords associated with accessories sold with the product will expose you to lead, a chemical known to the State of California and other governmental entities to cause cancer and birth defects or other reproductive harm. Wash hands after handling.
IMPORTANT SAFETY INSTRUCTIONS

READ INSTRUCTIONS — The safety and operating instructions should be read before the product is operated.

RETURN INSTRUCTIONS — The safety and operating instructions should be retained for future reference.

HEED WARNINGS — The warnings on the product and in the operating instructions should be adhered to.

FOLLOW INSTRUCTIONS — All operating and use instructions should be followed.

CLEANING — Unplug this product from the wall outlet before cleaning. The product should be cleaned only with a polishing cloth or soft dry cloth. Never clean with furniture wax, benzine, thinner, or other volatile liquids since they may mar the cabinet.

ATTACHMENTS — Do not use attachments not recommended by the product manufacturer as they may cause hazards.

WATER AND MOISTURE — Do not use this product near water — for example, near a bathtub, washbowl, kitchen sink, laundry tub, in wet basements, or near a swimming pool, and the like.

ACCESSORIES — Do not place this product on an unstable cart, stand, tripod, bracket, or table. The product may fall, causing serious injury to a child or adult, and serious damage to the product.

CART — A product and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the product and cart combination to overturn.

VENTILATION — Slots and openings in the cabinet are provided for ventilation and to ensure reliable operation of the product and to protect it from over-heating. These openings must not be blocked or covered. The openings should never be blocked by placing the product on a bed, sofa, rug, or other similar surface. This product should not be placed in a built-in installation such as a bookcase or rack unless proper ventilation is provided and the manufacturer's instructions have been adhered to.

POWER SOURCES — This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your product dealer or local power company.

LOCATION — The appliance should be installed in a stable location.

NONUSE PERIODS — The power cord of the appliance should be unplugged from the outlet when left unused for a long period of time.

GROUNDING OR POLARIZATION — This product is equipped with a plug that has a grounding pin. This plug will fit only one way into a grounding type outlet. If you are unable to insert the plug into an outlet, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the grounding type plug.

POWER-CORD PROTECTION — Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them. Pay particular attention to cords at plugs, convenience receptacles, and the point where they exit from the product.

OUTDOOR ANTENNA GROUNDING — If an outside antenna or cable system is connected to the product, be sure the antenna or cable system is grounded so as to provide some protection against voltage surges and static charges. Section 810 of the National Electrical Code, ANSI/NFPA 70, provides information with regard to proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna-discharge unit, size of grounding conductors, location of antenna-discharge unit, connection to grounding electrodes, and requirements for the grounding electrode. See figure.

LIGHTNING — For added protection for this product during a lightning storm, or when it is left unattended or unused for long periods of time, unplug it from the wall outlet and disconnect the antenna or cable system. This will prevent damage to the product due to lightning and power-line surges.

POWER LINES — An outside antenna system should not be located in the vicinity of overhead power lines or other electric light or power circuits, or where it can fall into such power lines or circuits. When installing an outside antenna system, extreme care should be taken to keep from touching such power lines or circuits as contact with them might be fatal.

OVERLOADING — Do not overload wall outlets, extension cords, or integral convenience receptacles as this can result in a risk of fire or electric shock.

OBJECT AND LIQUID ENTRY — Never push objects of any kind into this product through openings as they may touch dangerous voltage points or short-out parts that could result in a fire or electric shock. Never spill liquid of any kind on the product.

SERVICING — Do not attempt to service this product yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.

DAMAGE REQUIRING SERVICE — Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:

- When the power-supply cord or plug is damaged,
- If liquid has been spilled or objects have fallen into the product,
- If the product has been exposed to rain or water,
- If the product does not operate normally by following the operating instructions,
- If the product has been dropped or damaged in any way,
- When you notice a distinct change in the performance of the product,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,
- When the product exhibits a distinct change in performance, which you think may be caused by the product's exposure to temperature extremes from the normal operation,

Before You Start

Features

Multichannel Acoustic Calibration EQ System (MCACC)
In order to make setting up as easy as possible for users we have created the MCACC system. This unique and convenient way of getting good surround sound from the receiver makes trouble-free setup a snap. With the included microphone plugged into the front panel the MCACC system creates a monitoring environment to establish the parameters of the sound for the specific room you are using. The MCACC system adjusts the parameters to establish excellent surround sound effects and offers you studio quality home theater sound with minimum effort.

Dolby Digital EX, DTS-ES, DTS 96/24 and the Latest Audio and Video Formats
The VSX-53TX is equipped with Dolby Digital EX decoding, the very latest Dolby Digital contribution to home theater with surround back speakers in addition to surround speakers. These additional speakers make home theater even more realistic and powerful. Naturally, you can also play all existing audio formats, including the recently developed Dolby Pro Logic II and DTS-ES Extended Surround formats on the VSX-53TX as well. On the video side, the component video output is fully compatible with high definition, progressive-scan digital video (720p).

*Lucasfilm and THX are trademarks or registered trademarks of Lucasfilm, Ltd. and TM. Surround EX is a jointly developed technology of THX and Dolby Laboratories, and is a trademark of Dolby Laboratories. All rights reserved. Used under authorization.
*Manufactured under license from Dolby Laboratories. “Dolby”, “Pro Logic”, “Surround EX” and double-D symbol are trademarks of Dolby Laboratories.
**DTS”, “DTS-ES Extended Surround” and “Neo6” are trademarks of Digital Theater Systems, Inc.

Universal Player Compatibility (DVD Audio/Super Audio CD [SACD])
The receiver incorporates the latest technology and is able to handle cutting edge audio formats, like DVD Audio and Super Audio CD (SACD) which are just hitting the market. Its high compatibility offers a variety of inputs to decode all types of sources at the highest possible quality. The receiver’s multichannel input connections lets you hook up eight discrete channels of audio.

12V Trigger
For extra convenience the 12V Trigger is a connection method that enables external components to turn on automatically when the VSX-53TX is switched on.

Audio Scaler (HI BIT/HI SAMPLING)
This new technology enables the user to hear CD and DVD, as well as other soundtracks at a wider dynamic range, allowing for finer audio reproduction. This Audio Scaler approximates the audio of high end formats just becoming available now.

The Energy-saving Design
This unit is designed to use 0.8 W of energy when the receiver is in standby mode.
Before You Start

Checking the Supplied Accessories

Please check that you have received all of the following supplied accessories.

- AM Loop Antenna
- FM Wire Antenna
- "AA" IEC LR6 batteries x 2
- Operating Instructions
- Remote Control Unit
- Microphone for Auto Surround Sound Setup
- Microphone Stand for Auto Surround Sound Setup

Preparing the Remote Control

Loading the batteries

Load the batteries into the remote control as shown below. Please use alkaline batteries. When you notice a decrease in the operating range, replace all batteries with new ones.

1. AM Loop Antenna
2. FM Wire Antenna
3. "AA" IEC LR6 batteries x 2

CAUTION!

Incorrect use of batteries may result in such hazards as leakage and bursting. Observe the following precautions.

- Never use new and old batteries together.
- Insert the plus and minus sides of the batteries properly according to the marks in the battery case.
- Batteries with the same shape may have different voltages. Do not use different batteries together.
- When disposing of used batteries, please comply with governmental regulations or environmental public institution’s rules that apply in your country or area.
Before You Start

Operating range of remote control unit
The area in which you can use the remote control to operate the VSX-53TX is fairly large. To use, point the remote control toward the remote sensor on the front panel of this unit while within the range shown below.

Remote control may not function properly if:
• There are obstacles between the remote control and the remote sensor.
• Direct sunlight or fluorescent light is shining onto the remote sensor.
• The receiver is located near a device emitting infrared rays.
• Operated simultaneously with another remote control which uses infrared rays.

Installing the Receiver

CAUTION!
• Do not cover this unit in any way, for example with a sheet or piece of cloth. This would prevent proper heat dispersal.
• Do not place any object directly on top of this unit. This also would prevent proper heat dispersal.
• Be sure to leave adequate ventilation space around the amp! When installing in a rack, shelf, etc., be sure to leave more than 8 inches of space above the receiver.

Opening the Front Panel
To open the front panel push gently on the lower third of the panel with your finger.
Easy Setup Guide Part 1

Home Theater: The Basics

Most consumers are used to using stereo equipment to listen to music but many people are not used to home theater systems that give you many more options when listening to soundtracks. In fact, home theater is not really complicated and this little guide should give you an understanding of the basics. Home theater refers to the use of multiple audio tracks combined with multiple speakers to create a surround sound effect. There are three different factors involved in getting surround sound. Each contribute to what kind of sound you get. These factors are:

1) The equipment you are using for your home theater setup. Particularly important is the number of speakers you are using. We call this your speaker configuration.
2) The ‘source’ material you are using. This is the actual product (like a DVD) or broadcast (like cable TV) you are listening to/watching. We call this the source.
3) The last factor is the listening mode you choose on the VSX-53TX receiver. These are explained below and in subsequent chapters but most likely the PRO LOGIC II MOVIE for moves and the PRO LOGIC II MUSIC for music will be fine.

Let’s start with the home theater setup you have in your home.

1) Your Home System

The heart of your system is the VSX-53TX receiver and it is very flexible in getting you theater-like surround sound. You can use this receiver with anywhere from two to seven speakers (front left, front right, center, surround left and right, and surround back left and right) and a subwoofer to get home theater surround sound. We recommend you use seven speakers and a subwoofer. If this is not possible follow the instructions in “Auto Surround Sound Setup” in the "Easy Setup Guide Part 2" and you will still be able to get good surround sound. Also, a DVD player is essential for home theater and you can also hook up satellite or cable TV tuner to this receiver and get a more home theater-like sound from these sources.

2) The Source Material

DVDs have become the basic source material for home theater because they are convenient to use and offer excellent sound and picture quality as well as allow users to enjoy home theater soundtracks with more than two channels of audio. For example, Dolby Pro Logic plays back four channels (front left, front right, center and a single channel for both surround speakers). Dolby Digital and DTS sources usually have six discrete channels (front left, front right, center, surround left and right and a channel that powers the subwoofer) of sound. Since the subwoofer channel is only for bass sounds it is expressed as .1 of a channel and this multichannel setup has been named 5.1 channel sound.

It is important you consult the manual that came with your DVD player as well to make sure the player is outputting a surround soundtrack and all the other settings are appropriate for your home theater setup.

3) The Listening Modes

This receiver has many different listening modes and they are designed to cover all the speaker configurations and types of sources you might be using. In general, the PRO LOGIC II MOVIE listening mode is the easiest way to get realistic surround sound for movies. For music the basic listening mode for music is PRO LOGIC II MUSIC.

To listen to music in stereo simply choose the STEREO listening mode. Other possibilities (like listening to a stereo CD with all seven speakers or taking a stereo source and getting multichannel home theater-like sound) are explained in listening modes (page 47).

Conclusion

These are the three basic factors that contribute to your home theater sound. The easiest thing is to hook up seven speakers and a subwoofer and simply play your DVDs with PRO LOGIC II MOVIE listening mode. This will give you realistic and enjoyable home theater sound. First hook up your equipment, like your DVD player, TV and speakers. Then follow the Easy Setup Guide instructions to set up your system for surround sound. It is very important you do one of the surround sound setups to get optimal sound from your receiver.

For more details on any of the information presented here check the main section of the manual.
Easy Setup Guide Part 1

Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

1 Hooking Up Your DVD Player and TV

In order to use Dolby Digital/DTS soundtracks, which are at the heart of home theater, you need to hook up your DVD player with digital audio connections. You can do this by either a coaxial or an optical connection, you don’t need to do both. The quality of these two types of connections is the same but since some DVD players only have one type of digital terminal you need to figure out which yours has and hook it up to the appropriate terminal on the receiver. In order to do this you will need the proper cable. For coaxial connections you can use a coaxial digital cord or a regular RCA video cord, which have the same type of plugs. For optical connections you will need a special optical cable which you can buy at your local stereo store. For more information on cords and cables see page 23. You should also hook up your DVD player with analog audio connections. Use regular RCA stereo cords for these connections. Also hook up the video connection on your DVD player, and your TV to this receiver. For your TV it’s easiest to use a regular composite (RCA) video cord, as shown below.

Digital Connections

Some DVD players have both coaxial and optical terminals, but there is no need to connect both. If your DVD player has a coaxial terminal (not a PCM-only output) for the audio out hook it up using this terminal. Follow the diagram below. This is the best scenario, as you will be able to follow the default settings of this receiver and won’t need to assign the digital inputs (you should use DIGITAL IN 3).

If your DVD player only has an optical terminal for the audio output you can hook it up using one of the DIGITAL IN terminals 1 or 2 (for example, DIGITAL IN 2). In this case, you will need to assign the digital input (which means tell the receiver which input you used for your DVD digital audio). See page 12 for this.

![Digital Connections Diagram]
2 Speaker Connections

Home theater is designed to be setup with five, or seven speakers (front left and right; center; surround left and right; and, optimally, surround back left and right) and a subwoofer, but you can use this receiver with fewer speakers. Hook up the speakers you have to the A speaker terminals on the back of the receiver. If you only have two speakers hook them up as FRONT. If you have three hook up the single speaker as CENTER. Follow the diagram below in order to hook up all your speakers. A center speaker is very important for watching films because in digital soundtracks the dialog comes from the center speaker. If you do not have a center speaker you must tell the receiver the center channel is off or when you listen to digital soundtracks you won't hear any dialog. This can be done automatically by following the “Auto Surround Sound Setup” instructions from page 13 in this Easy Setup Guide. If possible, use surround back speakers. These speakers are important to take full advantage of all the sound channels on new, eight channel home theater DVDs. The diagram below also explains how to hook up a subwoofer which provides realistic bass sounds. For the subwoofer use a mono (single plug) RCA cord and for the other speakers use regular speaker cords.

Make sure you connect the speaker on the right to the R terminal and the speaker on the left to the L terminal. Also make sure the positive and negative (+/–) terminals on the receiver match those on the speakers.

Memo:

- We recommend speakers with a nominal impedance rated 8 \( \Omega \)-16 \( \Omega \), but you can change the speaker impedance setting of the receiver (see page 26).
- If you only have one surround back speaker hook it up to the left surround back terminal.
- If you use a THX certified subwoofer use the THX INPUT jack on the subwoofer (if your subwoofer has one) or switch the filter position to THX on your subwoofer.
- When you attached your speaker wire to the speaker terminal make sure that not even one strand of wire touches the back of the receiver. If this happens it could short out the receiver.
Easy Setup Guide Part 1

3 Setting up the Main Unit

1 Plug the AC power cord into a wall outlet.
2 Press the STANDBY/ON button to switch the receiver ON.

4 Assigning the Digital Inputs

This is only necessary if you did not hook up your DVD player to DIGITAL IN 3 using a coaxial cable but rather connected it to one of the optical digital inputs. The following example shows how to assign the DIGITAL IN 2 jack to DVD.

1 Turn on the receiver and your TV, press the RECEIVER button on the remote control.
2 Press the SYSTEM SETUP button. The SYSTEM SETUP menu appears on your TV (if it doesn’t, refer to page 10 to make sure you have properly connected the receiver to your TV).
3 Looking at the on-screen display on your TV, use the ▲▼ buttons to select INPUT ASSIGN. Press the ENTER button.
4 DIGITAL IN-SELECT should be selected, if not use the ▲▼ buttons to select it. Press the ENTER button.
5 Use the ▲▼ buttons to select DIGITAL-2 and press ENTER. The default setting for the DIGITAL-2 jack is CD-R.
6 Use the ▲▼ buttons to select DVD/LD and press ENTER.
7 Press the SYSTEM SETUP button. The receiver exits the setup process.
Easy Setup Guide Part 2

1 Auto Surround Sound Setup

If setting up your surround sound speakers seems like it's going to be an involved task you only need to use this quick, automatic method, known as the MCACC system, to achieve good surround sound. You'll need to hook up the microphone so that the receiver can hear and judge the distance, size, sound character and sound pressure level of the speakers and thus know what settings to make.

First turn the volume down, then plug the microphone into the SETUP MIC jack on the front panel of the receiver and put the microphone into its stand.

Follow the step-by-step guide to setting up your surround sound below. This will customize the surround sound for your listening environment. If you want to personalize your surround sound setups by making the settings manually go to “Setting Up for Surround Sound” (starting on page 36) and “EXPERT Setup” (starting on page 85). Make sure all the components you need, especially speakers, have been properly connected before you do the steps described here.

1 Hook up the microphone to the SETUP MIC jack on the Front Panel.

2 Place the microphone at your normal listening position.

Use a table, chair or something else to put the microphone at the same height as you usually listen to your system from.

If you have a tripod you can affix the mic stand to it.

3 Switch on the receiver and your TV.

Make sure your TV is set to this receiver as you will use the on-screen displays (OSDs) on your TV to follow these instructions.

4 If you have a subwoofer turn it on.

5 Press the RECEIVER button on the remote control.

6 Press the SYSTEM SETUP button and use the on-screen display (OSD) that appears on your TV.

7 The arrow should be pointing at SURROUND SETUP, press ENTER.
Easy Setup Guide Part 2

8 Select AUTO SETTING with the ▲▼ buttons and press ENTER.

9 Some auto setup instructions will be listed, make sure to follow them.
Make sure you have: hooked up the microphone and moved obstacles to the speakers out of the way. If you have a subwoofer make sure it is turned on and has the volume turned up.

WARNING: The test tones are very loud!! Make sure there are no infants or small children in the room and that no one who will be scared, upset or injured by loud noise is present. You yourself may want to wear earplugs. It is possible to lower the volume of test tones, but this could result in incorrect speaker settings.

10 If you have followed all setup instructions and warnings above make sure that the arrow is pointed to START and press ENTER. Be prepared for loud test tones.

Try to be as quiet as possible after hitting ENTER. The test tones may take up to 30 seconds.

The volume automatically increases to 0 dB, then the system will output some test tones and establish ambient noise levels, the microphone status, and what speakers you hooked up.

11 Check the speaker settings on the OSD.
If they match your speaker configuration make sure OK is selected and press ENTER. The test tones will be output loudly again. The test tones may take up to 5 minutes this time.

After they have finished, you see the SPEAKER SYSTEMS CHECK screen. If you want to view the settings select NEXT and press ENTER repeatedly. If not, simply go to step 13.

If they do not match the speaker configuration you hooked up and you want to try again select RETRY with ▲▼ buttons and press ENTER. Follow the instructions above from step 10.

If you get an error message instructing you to do something, follow the instructions and RETRY with ▲▼ buttons and press ENTER.

If the speaker settings do not match the speaker configuration you connected and you want to input the settings manually select ERR→FIX SP with the ▲▼ buttons, press ENTER. Go to step 12.

If you see an ERR message in the right side column, there may be a problem with the speaker connection. If selecting RETRY doesn’t fix the problem, turn off the power and check the speaker connections.
Memo:

- Make sure the room environment follows the guidelines displayed on the OSD during auto setup. If the room environment is not optimal for auto setup (too much ambient noise, obstacles blocking the speakers from the microphone, etc.) the final settings may be incorrect. Check for household appliances (air conditioner, fridge, fan, etc.) that may be affecting the environment and switch them off if necessary.
- Screens will turn off after three minutes and the receiver will automatically exit from the setup process.
- If you leave CHECK! or other error message on the screen for three minutes, or if you choose CANCEL at anytime during the setup, the settings made up to that point will be cleared.
- After completing the Auto Surround Sound Setup, ACOUSTIC CAL EQ ON (ALL CH ADJUST) is set automatically.
- Some older TVs may interfere with the operation of the mic. If this is the case turn the TV off when doing Auto Surround Sound Setup.

12 Use the ▲▼ buttons to select a speaker press ENTER. Then use the ▲▼ buttons to select the size of each speaker individually. Press ENTER. Use the ▲▼ buttons to select OK and press ENTER.

The system will output another series of test tones to establish the proper channel level, channel delay and acoustic calibration Eq. Again, be prepared for loud test tones.

After it has finished, you see the SPEAKER SYSTEMS CHECK screen. If you want to view the settings select NEXT and press ENTER repeatedly. If not, simply go to the next step.

13 Select EXIT and press ENTER to go back to the SURROUND SETUP menu. Then choose EXIT twice to return to normal use.

You should now have settings that will give you good surround sound. The MCACC indicator will light and the surround sound settings are complete.

2 Playing a DVD with Surround Sound

1 Make sure the receiver, your TV, your subwoofer and your DVD player are switched ON.

2 Press the DVD/LD button on the remote control.

You should see DVD/LD in the display on the receiver.

3 Play a DVD then adjust the MASTER VOLUME.

Memo:
To get a more refined sound, make the sound settings in “EXPERT Setup” on page 85.

If you're having trouble getting surround sound playback look at this Frequently Asked Questions (FAQ) guide:

Q1: Even though I'm playing a DVD I'm not getting 5.1 channel playback.
A1: Either the DVD is not set for digital output, or the Dolby Digital/DTS output settings are not correct. Set the DVD player to output a digital signal and set the Dolby Digital and DTS output properly. If you are unsure how to do this check the DVD initial setup in the manual that came with your DVD player.

Q2: There is no sound from the subwoofer or it is very low.
A2: There is a good possibility you haven't reached a part of the DVD that has an LFE channel (which feeds the subwoofer) yet. The LFE channel only appears in selected parts of the soundtrack. Continue playing and listen for the subwoofer.
If you want to hear more sound from the subwoofer set it to PLUS (see page 39 for more information and consult the Memo on page 40).
Connecting Your Equipment

Connecting your TV

Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

Connect your TV to the jacks as shown below. Hook up with either component video, S video, or composite video cords (the quality descends in this order) but you must use the same type of video cords to hook up your DVD player (and all other video components) as you use to hook up your TV. If you plan to hook up your DVD player with component video cords hook up your TV with them as well. Composite video cords, which look just like regular RCA audio cords (see page 20) but have only one cable are the most common.

CAUTION:
Don’t confuse the MONITOR OUT for your TV with the MULTI ROOM & SOURCE MONITOR OUT (for the MULTI ROOM feature only).

S Video

S video cables produce clearer picture reproduction by sending separate signals for the luminance and the color.

Component video

The video signal is divided into the luminance (Y) signal and the color (Pb and Pr) signals. In this way, interference between the signals is avoided.

Composite Video

Composite video cords are the most common or standard video cord but also the lowest quality. The color on the connector is yellow to distinguish it from regular RCA audio cords which have white and red connectors (see page 20). It is important to use a true composite video cord and not an audio cord (though they look exactly the same) because the impedance is different and this will affect the picture quality.

Component Video Input Default Settings

If you use component video cords to hook up your video equipment it is easiest to do so following the default settings, which are listed below. Remember you must use component video cords from your video source (for example, a DVD player) to the receiver and from the receiver to your TV (or monitor). If you don’t follow the default settings below you must assign the inputs you used with the “Assigning the Component Video Inputs” procedure (see page 82).

The default settings are:

COMPONENT VIDEO IN 1: DVD/LD
COMPONENT VIDEO IN 2: TV/SAT
Connecting Video Components

Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

Connect your video components as shown on this and the following page. For video components (for example, a DVD player) there are two types of connections to make, video and audio. Hook up your video signal with either component video, S video or composite video cords (the quality descends in this order) but you must use the same type of cord as you used to hook up your TV.

For the audio signal, in order to use digital soundtracks like Dolby Digital or DTS you must hook up a digital input, with either a coaxial or optical cord (see page 23). It is also a good idea to hook up your components with analog audio connections as well.

If you want to record from your DVD player composite (or S video) cord connections and analog audio connections are necessary.

Connecting a DVD player

Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

Hook up your audio signal with either a coaxial or optical digital cords (you don’t need to do both). If you hook up your DVD/LD player using component video cable connections you might need to setup your DVD player for component video output as well. See your DVD manual for details. If you have a DVD-Audio or Super Audio CD (SACD) compatible player, see page 21.

You need to hook up your audio with analog connections as well.

*The arrows indicate the direction of the signal.

Memo:
- Be sure to make either a digital coaxial or digital optical connection (pictured in this diagram as DIGITAL jack 3 or DIGITAL jack 2) but you don’t need to make both.
- If your digital connections are different than the default settings (see page 23) you will need to assign the digital jacks to the proper component(s).
Connecting Your Equipment

Connecting VCRs or DVRs

Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

Connect the video out of your VCR/DVR using either S video or composite video cords, depending on how you connected the receiver to your TV (see page 16). Use analog audio cords for the audio signal. To record, you also need to connect a set of audio/video outputs from the receiver to the audio/video inputs on your VCR/DVR. Note that to record video from a source component, the video connection from the source to the receiver and from the receiver to the recorder must be the same type.

Connecting a Video Component to the Front Panel

Connect a portable DVD player, video game console or any video component to the front panel as show here. Front video connections are accessed via the front panel input selector as VIDEO. You cannot assign the digital input on the front panel.

Be careful! For portable DVD players you will need a specialized optical cord (for the audio) that has a mini optical plug on one end and a regular optical plug on the other.
Connecting Satellite TV (SAT) Components

Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

Hook up the video signal with either component video, S video, or composite video cords, depending on how you connected the receiver to your TV (see page 16).

For the audio signal, in order to use digital soundtracks broadcast you must hook up a digital input. Use either a coaxial or optical cable, it doesn't matter which (see page 23). We recommend hooking up your audio with analog cables as well (see below).

*The arrows indicate the direction of the TV signal.

**Memo:**
- If your digital connections are different than the default settings (see page 23) you will need to assign the digital jacks to the proper component(s).
Connecting Your Equipment

Connecting Analog Audio Components

Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

Connect your audio components to the jacks as shown below. These are all analog connections and your analog audio components (turntable, cassette deck) use these jacks. Remember that for components you want to record with you need to hook up four plugs (a set of stereo ins and a set of stereo outs), but for components that only play (like a turntable) you only need to hook up one set of stereo plugs (two plugs). If you want to record to/from digital components (like a CD-R) to/from analog components you must hook up your digital equipment with these analog connections.

*The arrows indicate the direction of the audio signal.

**Audio cords**
Use (RCA) audio cords (not supplied) to connect the audio components.

Connect red plugs to R (right) and white plugs to L (left).

Be sure to insert completely.

Memo:
Depending on where the cassette deck is placed, noise may occur during playback of your cassette deck which is caused by leakage flux from the transformer in the receiver. If you experience noise, move the cassette deck farther away from the receiver.
Connecting Your Equipment

Connecting to the Multi Channel Analog Inputs (DVD-Audio or Super Audio CD (SACD) compatible player)

Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

If you have a DVD-Audio or Super Audio CD (SACD) compatible player, or are using an external Dolby Digital/DTS decoder, connect it to the multichannel analog inputs as shown below.

Memo:
If you use only one surround back input, be sure to hook up to the SURROUND BACK L jack.
Connecting Your Equipment

Connecting Digital Audio Components

Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

Connect your digital components as shown below. The VSX-53TX has two coaxial and two optical inputs for a total of four digital inputs on the rear panel plus one digital input on the front panel. In order to use digital soundtracks like Dolby Digital or DTS (among others) you need to make digital audio connections. You can do this by either a coaxial or an optical connection (you don’t need to do both). The quality of these two types of connections is the same but since some digital components only have one type of digital terminal, it is a matter of matching like with like (for example, the coaxial out from the component to coaxial in on the receiver).

Hook up your audio signal with either a coaxial or optical digital cords (you don’t need to do both). If you hook up your DVD/LD player using component video cable connections you might need to setup your DVD player for component video output as well. See your DVD manual for details.

There are two optical digital out jacks (the CD recorder is connected to one in the diagram below). If you connect this to the optical input on a digital recorder (currently these include MD, DAT and CD-R) you can make direct digital recordings with this unit.

We also recommend hooking up your digital components to analog audio jacks (see “Connecting Analog Audio Components” on page 20) in order to make recordings (some digital sources may be protected against making digital copies).

*The arrows indicate the direction of the audio signal.*
Connecting Your Equipment

Coaxial cords/Optical cables

Commercially available digital audio coaxial cords (standard video cords can also be used) or optical cables (not supplied) are used to connect digital components to this receiver.

Be sure to insert completely and in the case of the optical cable, right-side up. If it is inserted improperly it can break the shutter on the optical terminal (this won't, however, affect the connection or insertion of an optical cable).

Digital Input Default Settings

Unlike analog connections, the jacks for digital connections are not dedicated to one type of component, they can be used freely. Thus you must tell the receiver what digital component is connected to which jack so your components will be in sync with the names on the remote control buttons and the like. To avoid having to assign the digital inputs you can hook up your equipment in accordance with the receiver's default settings.

The default settings are:

- DIGITAL IN 1 (optical): TV/SAT
- DIGITAL IN 2 (optical): CD-R/TAPE1
- DIGITAL IN 3 (coaxial): DVD/LD
- DIGITAL IN 4 (coaxial): CD

See “Assigning the Digital Inputs” on page 81 if the way you hook up your equipment is different from the default settings listed here.
Connecting Your Equipment

Connecting the Radio Antennas

Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

Connect the supplied FM wire antenna and the AM loop antenna to the ANTENNA terminals as shown below. These antennas should provide adequate reception quality in most cases, but connecting outdoor antennas should noticeably improve sound quality.

**FM wire antenna**

1. Assemble the antenna.
2. Twist exposed wire strands together and insert.
3. Attach to a wall, etc. (if desired) and face toward the direction providing the best reception.

**AM loop antenna**

To improve AM reception

Connect a 15 to 18 feet (5 – 6 meter) length of vinyl-coated wire to the AM LOOP ANTENNA terminal in addition to the supplied AM loop antenna. For best possible reception, suspend horizontally outdoors.

**Using outdoor antennas**

**To improve FM reception**

Connect an external FM antenna.

**To improve AM reception**

Connect an external AM antenna.
Connecting Your Equipment

Connecting Speakers

Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

We recommend a full complement of seven speakers and a subwoofer as shown here but, naturally, everyone’s home setup will vary. Simply connect the speakers you have in the manner described below.

One of the latest features of home theater is the use of surround back speakers. These speakers add even greater realism in movie sound effects and some new discs with soundtracks in Dolby Digital or DTS incorporate these channels. See page 27 for speaker placement.

In general, make sure you connect the speaker on the right to the R terminal and the speaker on the left to the L terminal. Also make sure the positive and negative (+/-) terminals on the receiver match those on the speakers.

Memo:
• We recommend speakers with a nominal impedance rated 8 Ω-16 Ω, but you can change the speaker impedance setting of the receiver (see page 26).
• If you only have one surround back speaker hook it up to the left surround back terminal.
• If you are using a THX certified subwoofer use the THX INPUT jack on the subwoofer (if your subwoofer has one) or switch the filter position to THX on your subwoofer.

Speaker terminals

1 Twist exposed wire strands tightly together.
2 Loosen speaker terminal and insert
3 Tighten terminal.

The speaker terminals also accept single banana plugs. (Refer to speaker manual for details.)
Connecting Your Equipment

Speaker impedance

You can change the speaker impedance for VSX-53TX but we recommend using speakers with an impedance of 8 Ω - 16 Ω (the default setting). If you are using 6 Ω - less than 8 Ω impedance speakers, you need to change the impedance setting. Use any speaker rated between 6 Ω - 16 Ω.

First put the receiver in STANDBY mode, then press the power button while holding down the SPEAKERS button. The receiver will reset to the new impedance setting. With this method you can choose the 8 Ω - 16 Ω setting or the 6 Ω - 8 Ω setting.

Bi-wiring your speakers

This high quality but difficult method of wiring speakers will be unnecessary for most users. In order to do this your speakers must be bi-wireable (that is they must have separate terminals for the high and low frequencies).

To bi-wire a speaker, connect two sets of speaker cords to each speaker terminal on the receiver. The easiest way to do this is to connect one wire in the normal way, and use a banana plug for the other one. Make sure you use a parallel (not series) connection when doing so. Don’t connect different speakers from the same terminal in this way.
### Placing Your Speakers

Proper speaker placement is essential to realize the best sound from your system. It is very important for speaker placement to read the instructions that come with your speakers so please be sure to do so.

#### Speaker placement

If you have a multiple speaker arrangement the placement of the speakers is extremely important. To achieve the best possible surround sound, install your speakers as shown below. Make sure all speakers are installed securely to prevent accidents and improve sound quality. Some speakers are designed to be floor-standing but others benefit greatly from speaker stands which raise them off the floor. Be sure to read your speaker manuals for the best placement of the speakers.

![Speaker Placement Diagram](image)

**Memo:**
- When installing speakers near the TV, we recommend using magnetically shielded speakers to prevent distortion in the color of the TV screen. If you do not have magnetically shielded speakers and notice discoloration of the TV screen, place the speakers farther away from the TV.
- Install the center speaker above or below the TV so that the sound of the center channel is localized at the TV screen.
- THX recommends that if you have two surround back speakers you place them close together.

---

### Power Connections (AC OUTLETS)

**[SWITCHED TOTAL 100 W MAX]**

Power supplied through this outlet is turned on and off by this unit’s STANDBY/ON button. Total electrical power consumption of connected equipment should not exceed 100 W.

**CAUTION!**
- Do not connect appliances with high power consumption such as heaters, irons, or television sets to the AC OUTLET in order to avoid overheating or fire risk. This can cause the amplifier to malfunction.
- The equipment should be disconnected by removing the mains plug from the wall socket when not in regular use, e.g. when on vacation.

**CAUTION!**

DO NOT CONNECT A MONITOR OR TV SET TO THIS UNIT’S AC OUTLET.
Displays and Controls

Front Panel

All the controls on the front panel are explained and/or referenced here. To open the front panel push gently on the lower third of the panel.

1 MULT JOG dial
   You can use this dial for many purposes. When you press the SET UP button (12), you can use it to perform SYSTEM SETUP operations; select a function or a listening mode or do TUNER EDIT functions (in TUNER mode).

2 STANDBY/ON button
   Press to switch the receiver ON or into STANDBY mode.

3 Listening mode buttons (page 45)
   There are two types of SURROUND modes:
   MOVIE: Press to put the receiver into MOVIE mode (see page 46).
   MUSIC: Press to put the receiver into MUSIC mode (see page 47).
   STEREO/DIRECT (see page 45): Switches the receiver into STEREO mode if it was in a different sound mode or toggles between DIRECT and STEREO mode.

4 ENTER button
   Use this button to enter information concerning the SYSTEM SETUP, listening mode or the tuner.

5 STANDBY indicator
   Lights when the receiver is in STANDBY mode.
   (Please note that this receiver consumes a small amount of power [0.8 W] in the standby mode.)

6 Remote sensor
   Receives the signals from the remote control.

7 Display (See page 33)

8 MCACC indicator (see pages 13 and 49)
   Lights when the ACOUSTIC CAL EQ is on. (After the Auto Surround Sound Setup has been completed the ACOUSTIC CAL EQ is set on and this display will light.)

9 MULTI CH IN button
   Use this button to select the component you have hooked up to the MULTI CH IN terminals (for example, a DVD-Audio player).
10 **ACOUSTIC EQ button (see pages 49 and 89)**
Press to switch on/off and select the type of acoustic calibration EQ.

11 **MASTER VOLUME dial**
Use to raise or lower the volume of the receiver.

12 **MULTI JOG CONTROL buttons**
- **SET UP**
  Press to switch the SYSTEM SETUP mode.
- **RETURN**
  Press to move back one step in the SYSTEM SETUP process.

13 **SIGNAL SELECT button (see page 44)**
Press SIGNAL SELECT repeatedly to select one of the following:
- **AUTO** – If there are analog and digital signals input, the receiver automatically selects the digital signal.
- **DIGITAL** – To select an optical or coaxial digital signal.
- **ANALOG** – To select an analog signal.

14 **HI-BIT HI-SAMPLING button (see page 52)**
Use this button to switch the AUDIO SCALER mode on or off.

15 **SB CH MODE button (see page 54)**
Use this button to turn the surround back channels ON/OFF/AUTO or switch the virtual surround back mode between ON/OFF/AUTO.

16 **Tuner control buttons (see page 57)**
- **BAND**
  Press to select the AM or FM band.
- **CLASS**
  Press repeatedly to switch the preset station classes.
- **SELECT**
  Switches the –/+ buttons between station memory and frequency select modes.
- **–/+**
  Selects station memories or frequencies when using the tuner.
- **TUNER EDIT**
  Press to memorize and name a station for recall using the MULTI JOG and ENTER buttons.

17 **MULTI ROOM & SOURCE buttons (see page 72)**
Press to use the multi room feature (requires an optional IR receiver).
- **CONTROL button**
  Used together with the MULTI JOG to select the function or use with the MASTER VOLUME to select the volume of the MULTI ROOM system.
- **ON/OFF button**
  Use to switch MULTI ROOM function on or off.

18 **PHONES jack**
Connect headphones for private listening (no sound will be heard through the speakers).

19 **SPEAKERS (A/B) button**
The use of this button depends on how the SURRBACK SYSTEM (see page 37) is set. If NORMAL SYSTEM or MR&S is chosen this button toggles between A and OFF. If SECOND ZONE is chosen this button toggles between A, B, A+B and OFF.

20 **TONE CONTROL buttons (see page 51)**
- **TONE button**
  This button switches between TONE on and off, which bypasses the tone circuitry.
- **BASS/TREBLE button**
  Use to select whether the bass or treble will be adjusted.
- **–/+ buttons**
  Use to adjust the frequency levels.

21 **SETUP MIC jack (see page 13)**
Plug in the set up mic here. This is very important in order to set up your system and get proper surround sound.

22 **VIDEO INPUT jacks (see page 18)**
- **DIGITAL IN**
  Digital input for connecting a game console, DVD player or video camera (etc.), that has an optical digital connection.
- **S-VIDEO**
  Video input for connecting a portable DVD player or video camera (etc.), that has an S video out.
- **RCA VIDEO / AUDIO (L/R)**
  Video input for connecting a portable DVD player or video camera (etc.), that has standard RCA video/audio outputs.
Displays and Controls

Remote Control

This page describes the buttons on the remote control used to operate the receiver.

3 Listening mode buttons (see page 45)
SURROUND buttons (MOVIE, MUSIC, ↔ ↔ & ENTER):
MOVIE: Press to put the receiver into MOVIE listening mode (see page 46).
MUSIC: Press to put the receiver into MUSIC listening mode (see page 47).
↔ ↔ : Use to select the MOVIE or MUSIC listening mode.
ENTER: Use this button to enter information concerning the listening modes.
STEREO/DIRECT (see page 45): Switches the receiver into STEREO mode if it was in a different sound mode or toggles between DIRECT and STEREO mode.

4 SYSTEM SETUP button
Use for all system setups, including the speaker and sound systems. For more information see “Setting Up for Surround Sound” starting on page 36. For a DVD player use this button to bring up the DVD menu and for a tuner use this button in the same way as the TUNER EDIT button.

5 AUDIO button
Use to switch the audio tracks of a DVD when in DVD mode.

6 Command button for other components (see page 64)
Use these buttons to control other components you selected with the MULTI CONTROL buttons. You must input the preset code in order use this function (see page 62).

7 Number buttons
These can be used for many purposes depending on the mode of the remote control.
When in receiver mode the buttons operate as below:
DIMMER button (see page 56)
Use to adjust the brightness of the receiver’s display.
LOUDNESS button (see page 50)
Switches the LOUDNESS mode on or off.
TONE button (see page 51)
This button switches between TONE on and off, which bypasses the tone circuitry.
BASS/TREBLE buttons (see page 51)
Use to select whether the bass or treble will be adjusted.

(+/–) buttons
Use to adjust the TONE level, effect level, channel level and sound delay as well as make Dolby Pro Logic II MUSIC parameter settings.

EFFECT/CH SEL button
Switches between the different channels so you can add volume individually to each channel with the + and – buttons. Also selects EFFECT mode, Dolby Pro Logic II MUSIC parameters (see page 48) and sound delay settings (see page 51). You can then use the + and – buttons to make these adjustments.

SIGNAL SEL button (see page 44)
Press repeatedly to select one of the following:
- AUTO – If there are analog and digital signals input, the receiver automatically selects the digital signal.
- DIGITAL – To select an optical or coaxial digital signal.
- ANALOG – To select an analog signal.

DNR (DIGITAL NR) button (see page 49)
Switches the DIGITAL NR on or off.

VIDEO SEL button (see page 56)
Use to toggle between the different video input possibilities.

HI-BIT button (see page 52)
Use this button to switch the AUDIO SCALER on or off.

TV CONTROL buttons
The following buttons are used to control the TV only and can be used once they are preset to control your TV.

TV button
This is a dedicated TV button. Use it to turn on/off your TV.

INPUT SELECT: Press to select the input source for the TV.

CHANNEL +/- : Use these buttons to change the channel of the TV.

VOLUME +/- : Press to control the volume of the TV.

9 MULTI OPERATION button
Use this button with MULTI OPERATION (page 75) and SYSTEM OFF (page 77).

10 LED display
This display flashes when a command is sent from the remote control to the receiver. It also flashes at other times, for example when teaching the receiver preset codes.

11 SOURCE ◁ button
Use this button to turn on/off other components. You must input the preset code in order to use this function (see page 62).

12 RECEIVER button
Use this button to switch the remote control into receiver mode in order to get certain receiver functions or do receiver setups.

13 Receiver functions
ACOUSTIC EQ button (see page 89)
Press to switch on/off and select the type of acoustic calibration EQ.

INPUT button
Press to select an input source. The button will cycle through all the possible sources.

SB CH MODE button (see page 54)
Use this button to turn the surround back channels ON/OFF/AUTO or switch the virtual surround back mode between ON/OFF/AUTO.

MULTI CH INPUT button (see page 53)
Use this button to select the component you have hooked up to the MULTI CH IN terminals (for example, a DVD-Audio player).

MIDNIGHT button (see page 50)
Switches the MIDNIGHT listening mode on or off.

MUTE button
Press to mute or restore the volume.
Displays and Controls

14 MASTER VOLUME (+/-) buttons
Use to raise or lower the volume of the receiver.

15 TOP MENU/GUIDE button
Use to find stations or menus on a digital TV tuner. For a DVD player use this button to bring up the DVD menu.

16 ▲/▼/◄/►/ENTER buttons
These buttons can be used for a variety of operations in the SYSTEM SETUP menu.
These buttons are used to control the menus for other components when in those modes (DVD, digital TV tuner, satellite tuner, cable tuner, etc.). In TUNER mode, they can select a station and/or a frequency.

17 RETURN button
When you are in a receiver setup operation this button will go back one step in the SYSTEM SETUP procedure. When you are using your DVD menu screen this button acts the same as the DVD player’s “Return” button. When you are using cable tuners, satellite tuners or digital TV tuners this button will either exit you from the menu screen or act like a “Return” button above, depending on the maker of the unit.

18 SUB TITLE button
Use to switch the subtitles on a DVD player or disc.

19 REMOTE SETUP button
Use to customize the remote control functions and the remote control itself. (See “Setting Up the Remote Control to Control Other Components” starting on page 62).
### Displays and Controls

**Display**

All the display information is explained and/or referenced here.

| 1 | SIGNAL indicators | 2 | Digital format indicators | 3 | LOUDNESS indicator | 4 | MIDNIGHT indicator | 5 | TONE indicator | 6 | DNR indicator | 7 | DSP indicators | 8 | Volume level indicator | 9 | MULTI-ROOM indicator | 10 | Hi-BIT/SAMPLING indicator | 11 | Speaker indicators (see page 68) | 12 | Program Format indicators | 13 | SB CH indicators (see page 54) |
| 1 | SIGNAL indicators | 2 | Digital format indicators | 3 | LOUDNESS indicator | 4 | MIDNIGHT indicator | 5 | TONE indicator | 6 | DNR indicator | 7 | DSP indicators | 8 | Volume level indicator | 9 | MULTI-ROOM indicator | 10 | Hi-BIT/SAMPLING indicator | 11 | Speaker indicators (see page 68) | 12 | Program Format indicators | 13 | SB CH indicators (see page 54) |
| **1 SIGNAL indicators** | Light to indicate the input signal you selected. | **2 Digital format indicators** | PRO LOGIC II: Lights during Dolby Pro Logic II processing. | **3 LOUDNESS indicator** | Lights when LOUDNESS is on. | **4 MIDNIGHT indicator** | Lights when MIDNIGHT is on. | **5 TONE indicator** | Lights when the TONE control is on. | **6 DNR indicator** | Lights when DIGITAL NR is on. | **7 DSP indicators** | MOVIE: Lights when a MOVIE mode is selected. When a DSP MOVIE mode is selected DSP will light with a box around it. | **8 Volume level indicator** | **9 MULTI-ROOM indicator** | Lights when the MULTI ROOM system is on. | **10 Hi-BIT/SAMPLING indicator** | Lights when a AUDIO SCALER mode is on. | **11 Speaker indicators (see page 68)** | Lights to indicate the current speaker system, A and/or B. | **12 Program Format indicators** | For Dolby Digital or DTS sources: These indicators change according to which channels are active in the source. When all three LS (left surround), S (surround) and RS (right surround) light at the same time it means a source with a 6.1 channel playback flag is being used. | **13 SB CH indicators (see page 54)** | Light to indicate the status of the surround back channels. | **AUTO** – Lights when the SB CH MODE or virtual surround back mode is set to AUTO. | **ON** – Lights when the SB CH MODE or virtual surround back mode is set to ON. | **OFF** – Lights when the SB CH MODE or virtual surround back mode is set to OFF. |
Displays and Controls

Back Panel

All the terminals on the back panel are explained and/or referenced here.

1 DIGITAL OUT terminals (see page 22)
Use these terminals to output a digital signal to a DVD-R, CD-R, MD recorder or any other kind of digital recorder.

2 CONTROL IN/OUT terminals (see page 74)
You can use these jacks to hook up other PIONEER equipment, that has a CONTROL terminal, so that you can control them all by pointing the remote control(s) at one remote sensor.

3 Radio antenna terminals (see page 24)
Hook up antennas for the radio tuner built into the receiver here.

4 MULTI-ROOM & SOURCE OUT terminals (see page 70)
These terminals output the audio and video signal to a sub-system in a secondary room. Note that the MONITOR OUT here is different than the MONITOR OUT for the main system. These are analog jacks.

5 MONITOR OUT terminals (connect a TV or monitor here, see page 16)
Use these terminals to output the video signal to your TV, video projector or monitor in your main room. Be careful not to confuse these jacks with the MULTI ROOM & SOURCE MONITOR OUT.

6 PRE OUT analog terminals (connect an amplifier here, see page 69)
Use these terminals to output the audio signal from this amplifier to a different amplifier if that's how you choose to set up your system.

7 COMPONENT VIDEO MONITOR OUT terminals
Use these terminals to output the video signal from the COMPONENT VIDEO IN terminals to your TV. See page 16 for more information.

8 12V TRIGGER terminal (see page 84)
Use this terminal to output a signal that can automatically turn on another component. DC OUT12V/100mA is the maximum power.
9 MULTI-ROOM & SOURCE REMOTE IN terminal (see page 70)
Use this terminal to hook up a sub-system in a secondary room. This hook up requires a separately sold IR receiver and allows you to use the receiver to hear different audio sources in different rooms.

10 SPEAKERS terminals (see page 25)
Use these terminals to connect speakers to the receiver. The FRONT, CENTER and SURROUND terminals are for the main speaker system and the SURROUND BACK speakers can be set to either the main system, the SECOND ZONE, or the MULTI ROOM. See page 37 to set the SURROUND BACK speakers.

11 AC OUTLET (switched, 100 W max)
Hook up an external component to the power supply of this receiver. Only do this with audio or video components being used in this system and never hook up heavy equipment (like TVs, heaters, air conditioners, refrigerators, etc.) to this receiver.

12 DIGITAL IN terminals (see page 22)
Use these terminals to input the signal from a DVD, CD player or any other kind of digital player. To be able to play Dolby Digital and other surround soundtracks you need to make digital connections. To do this use the digital terminals here. If you don't connect as per the default settings (see page 23) you need to complete “Assigning the Digital Inputs” on page 81.

13 Audio input/output terminals (connect analog components here, see page 20)
Use these terminals to input/output the audio signal from analog components (like a cassette deck or turntable). These are analog jacks.

14 Video components input/output terminals
Input/output signals from your video components (DVD, VCR, TV tuners, SAT tuners, etc.) here (see page 17).

15 MULTI CH IN terminals (see page 21)
Use these terminals to input a multichannel surround signal (for example, a DVD-Audio signal) in an analog fashion. These are analog jacks.

16 COMPONENT VIDEO IN terminals
Use these terminals to hook up the video connections of your video components with this high quality method. Your components will have to have the terminals as well to take advantage of this kind of connection. If you don’t connect as per the default settings (see page 16) you need to complete “Assigning the Component Video Inputs” on page 82.
Setting Up for Surround Sound

To ensure the best possible surround sound, complete the following setup operations. Some of these are the same (and take precedence over) the settings you made in the Easy Setup Guide, so consider if the ones you made at that time were adequate. If you feel they were, move on to the next setting in this section.

These setup operations use on-screen displays (OSDs) on your TV to display the settings and choices so be sure your TV and receiver are properly hooked up and that your TV is set to this receiver. You need to connect the setup mic to the front panel of the receiver so that it can measure the sound and ensure the proper settings. For more information on the mic hookup see page 13.

1 Turn on the receiver and your TV. Press the RECEIVER button on the remote control.
   Make sure your TV is connected and set to the video input the receiver is using.

2 Press the SYSTEM SETUP button.
   The menu possibilities appear on your TV.

3 SURROUND SETUP should be selected. If it isn’t use the ▲▼ buttons to select it. Press the ENTER button.

4 Use the ▲▼ buttons to navigate through the menus. When you have the setting you want in a particular menu, press ENTER.
   In each mode, the current settings are displayed. We suggest you do a basic system setup for surround sound when you first hook up the receiver. That gets it out of the way and you won’t need to do it again unless you change your home set up (by adding new speakers, etc.). To do a basic setup use the SURRBACK menu if necessary and then choose either the AUTO SETTING or NORMAL setup procedure and complete that. You don’t need to do both as they accomplish the same ends and we recommend the AUTO SETTING method. To do a more advanced setup for surround sound see EXPERT setup starting on page 85.

SURRBACK SYSTEM (page 37)
   Use to choose options for your surround back speakers.

AUTO SETTING (page 13)
   See the Easy Setup Guide Part 2 for an explanation of this setup.

NORMAL (page 38)
   Use this method to manually adjust all the surround sound functions.

EXPERT (page 85)
   Use these settings to fine tune your surround sound and make it more personalized.
Surround Back System

This setup selects how your surround back system will be used. If you want to use it for surround back speakers in your main speaker system choose NORMAL SYSTEM. In this case you won’t have any B (or secondary) speaker system as these speakers fill that role also for the VSX-53TX. If starting fresh, complete steps 1-3 on page 36.

1. SURROUND BACK SYSTEM should be selected. If it isn’t use the ▲▼ buttons to select it. Press the ENTER button.

   The setup possibilities appear on your TV.

2. Use the ▲▼ buttons to select the surround back system setting. Press the ENTER button.

   Choose from:
   - **NORMAL SYSTEM**: if you want to use these speaker terminals for your surround back speakers in your main speaker system (referred to as the A speaker system).
   - **SECOND ZONE**: if you want to use the these speaker terminals for an independent speaker system (referred to as speaker system B).
   - **MR&S**: if you want to use these speaker terminals for a different, independent room. You can hear a completely independent source through these speakers but you will need a separate IR receiver (see page 70).

3. EXIT should be selected. Press the ENTER button.

   You will return to the SURROUND SETUP menu display. Next, proceed to either AUTO SETTING (page 13) or NORMAL (page 38). If you want to change a setting before proceeding start over from step 1.
Setting Up for Surround Sound

NORMAL Setup

This is the manual method to setup your sound parameters for surround sound. You don’t need to do this, however, if you did the AUTO SURROUND SETUP method on page 13. If you feel the settings in the AUTO SURROUND SETUP do not suit your personal tastes, the settings you input here will override them and allow you to adjust the parameters manually.

You only need to do these settings once (unless you change the placement of your current speaker system or add new speakers, etc.). If starting fresh, complete steps 1–3 on page 36.

1 Use the ▲▼ buttons to select NORMAL. Press the ENTER button.
The setup possibilities appear on your TV.

2 Use the ▲▼ buttons to navigate through the NORMAL setup menus. When you have the setting you want in a particular menu, press ENTER.

In each mode, the current settings are displayed. We suggest you adjust all these settings when you first hook up the receiver. That gets them out of the way and you won’t need to return to this setting mode unless you change your home setup by adding new speakers (etc.).

SPEAKER SETTING (page 39)
Use to specify the type and number of speakers you connected.

CHANNEL LEVEL (page 41)
Use to balance the volumes of your different speakers. This is also necessary for the most realistic surround sound.

SPEAKER DISTANCE (page 42)
Use to select the distance settings for each set of speakers. You must add distance settings to all your speakers for the most realistic surround sound. Adding a slight delay to some speakers enhances sound separation and is particularly important for achieving a surround sound effect. You need to figure out the distance from your listening position to your speakers to add the proper delay.

See the next four pages for more information on these settings.
Speaker Setting

The information below shows you how to select the correct settings for the type and number of speakers you connected. Most importantly, you need to decide how to route the sound for all the speakers you connected. To do this select the size of the front, center, surround and surround back speakers (if you hooked them up). It is important to make these settings as accurately as possible or, in some cases, you may not get the full soundtrack from a disc.

Use the information below to complete the steps that follow and set up the receiver to match the speakers you have hooked up.

Complete steps 1–2 on page 38 to start.

FRONT (default setting is SMALL)
Select SMALL to send bass frequencies to the subwoofer. Select LARGE if your speakers will reproduce bass frequencies effectively or if you did not connect a subwoofer. (If you select SMALL for the front speakers the subwoofer will automatically be switched YES. Also, the center and surround speakers cannot be set to LARGE if the front speakers are set to SMALL. In this case, all bass frequencies are sent to the subwoofer.)

CENTER (default setting is SMALL)
Select LARGE if your speaker will reproduce bass frequencies effectively.
Select SMALL to send bass frequencies to the other speakers or subwoofer.
If you did not connect a center speaker, choose NO. In this case, the center channel is output from the front speakers.

SURROUND (default setting is SMALL)
Select LARGE if your speakers will reproduce bass frequencies effectively.
Select SMALL to send bass frequencies to the other speakers or subwoofer.
If you did not connect surround speakers choose NO. In this case, the sound of the surround channels is output from the front and center speakers.
If the front speakers are set to SMALL, the surround speakers will automatically be set to SMALL.

SURRBACK (default setting is SMALL X2)
If you chose SECOND ZONE or MR&S in SURRBACK SYSTEM on page 37, or if you chose NO for SURROUND, you won’t be able to choose this setting.
Select the number of surround back speakers you have. You can choose one speaker, two, or none.
If you select one speaker, make sure to hook it up to the SURROUND BACK L terminal.
Select LARGE if your speakers will reproduce bass frequencies effectively.
Select SMALL to send bass frequencies to the other speakers or subwoofer.
If you did not connect surround back speakers choose NO.
If the front speakers or the surround speakers are set to SMALL, the surround back speakers will automatically be set to SMALL.

SUBWOOFER (default setting is YES)
Leave it selected if you connected a subwoofer.
If you selected SMALL for the front speakers the subwoofer will automatically be set to on (you won’t be able to choose NO or PLUS).
If you did not connect a subwoofer choose NO. In this case, the bass frequencies are output from the front or surround speakers.
Choose the PLUS setting if you want stronger reproduction of deep bass sounds.
If you select PLUS the bass frequencies that would normally come out the front and center speakers are all routed to the subwoofer.
Setting Up for Surround Sound

1. **SPEAKER SETTING** should be selected. If it isn’t use the ▲▼ buttons to select it. Press the ENTER button. The setup possibilities appear on your TV.

2. With the ▲▼ buttons choose the speakers that you want to set. Press the ENTER button. The setup possibilities appear on your TV.

3. Use the ▲▼ buttons to choose the number (YES or NO, X1 or X2) and the size (LARGE or SMALL) for each set of speakers. Press ENTER. PLUS is also a possibility for the SUBWOOFER.

4. Repeat steps 2 and 3 for all speakers channels.

5. Use the ▲▼ buttons to select EXIT and press ENTER.

Next, proceed to CHANNEL LEVEL below.

If you want to change a setting before proceeding start over from step 1.

**Memo:**
If you have a subwoofer and like lots of bass, it may seem logical to select LARGE for your front speakers and leave the subwoofer selected. This may not, however, yield the best bass results. Depending on the size and shape of your room you may actually experience a decrease in the amount of bass due to what is called low frequency cancellations. If you have a subwoofer, listen to the bass response with the front speakers set to LARGE and SMALL alternately and let your ears judge which sounds best. The safest option is to route all the bass sounds to the subwoofer by selecting SMALL for the front speakers.

[Diagram with steps 1-5]
Channel Level

The following steps show you how to balance the sound output level of your speakers. Proper speaker balance is essential for obtaining high quality surround sound. If continuing from SPEAKER SETTING go to step 1. If starting fresh, complete steps 1–2 on page 38.

1 CHANNEL LEVEL should be selected. If it isn’t use the ▲▼ buttons to select and press ENTER.

2 There are two ways to set the CHANNEL LEVEL: MANUAL or AUTO. Select a setting mode with the ▲▼ buttons and press ENTER.

Test tones will be output.

WARNING: Be prepared! The test tones are output at a high volume level.

MASTER VOLUME rotates to the reference position (0 dB) and the display on the receiver flashes TEST TONE. After a few seconds the test tone is output.

MANUAL: move the test tone manually and adjust the channel level.

AUTO: the test tone moves by itself and you adjust the levels.

3 Adjust the speaker level with the instructions below for the method you chose.

Adjust the channel level from –10 dB to +10 dB in 0.5 dB increments.
The default setting is 0 dB.

In MANUAL (manual test tone) mode

To switch the test tone between each speaker use the ▲▼ buttons and push ENTER. Adjust the level of each speaker using the ▲▼ buttons and ENTER. When done go to step 4.

In AUTO (automatic test tone) mode

This mode switches the test tone between each speaker automatically. The test tone output cycles through the speakers in the following order:

Adjust the level of each speaker using the ▲▼ buttons as the test tone is emitted and wait for it to move to the next speaker. When done go to step 5.

If you want to change a setting before proceeding you need to complete the procedure and start over from step 1.

4 When you have the levels you want press ENTER. EXIT should be selected (if it isn’t select it with the ▲▼ buttons).

5 Press ENTER.

Next, proceed to SPEAKER DISTANCE next page.
Setting Up for Surround Sound

Speaker Distance

Adding a slight delay to some speakers is necessary to achieve proper sound depth, separation as well as an effective surround sound effect. You need to figure out the distance from your listening position to your speakers to add the proper delay. The following steps show you how to set the delay time for each channel by specifying the distances from your listening position to each speaker. Once you specify the speaker distances (or it is done automatically in the Easy Setup Guide), the receiver calculates the correct delay times automatically. If continuing from CHANNEL LEVEL go to step 1. If starting fresh, complete steps 1–2 on page 38.

1 The SPEAKER DISTANCE should be selected. If it isn’t use the ▲▼ buttons to select it. Press the ENTER button.

The setup possibilities appear on your TV.

2 Select each speaker channel with the ▲▼ buttons and press ENTER.

3 Use the ▲▼ buttons to add or subtract the distance in feet that the speaker is from your normal listening position. Press the ENTER button.

Adjust the speaker distance in half foot increments from 0.5 to 45 feet. The default setting is 10 feet.

4 Repeat steps 2 and 3 for all speaker channels.

5 Use the ▲▼ buttons to select EXIT and press ENTER.

If you want to change a setting before proceeding start over from step 1.

6 Press the SYSTEM SETUP button to leave the SYSTEM SETUP mode.
Stereo and Multichannel Playback

The following instructions show you how to play sound sources with the VSX-53TX. Before doing so be sure to complete the setup procedures described in the “Easy Setup Guide Part 2” (starting on page 13) or “Setting Up for Surround Sound” (starting on page 36). This is particularly important to achieve a surround sound effect with Dolby Digital or DTS sources.

1. Turn on the power of the playback component.

2. Press the STANDBY/ON button to turn on the receiver. Be sure that the STANDBY indicator turns off on the front panel.

3. Press the MULTI CONTROL (or INPUT) on the remote control to select the source you want to playback. Choose the type of signal input with the SIGNAL SELECT button. See the next page for more details, if necessary.

4. Choose a LISTENING MODE one of two ways.

   For SURROUND modes: press MOVIE or MUSIC, use the buttons to select the mode you want and press ENTER.
   For STEREO/DIRECT: press the button for that mode.

   On the front panel, use the MOVIE or MUSIC buttons and the MULTI JOG dial. Press the button of the mode type you want and then use the dial to cycle through the possibilities. Press ENTER. See “MOVIE modes” (page 46) or “MUSIC modes” (page 47) for details on which modes are available and in which situations they are designed to be used.

   When playing source signals greater than 88.2kHz over a digital connection, MOVIE/MUSIC modes cannot be selected.

5. Start playback of the component you selected in step 3.

6. Adjust the volume by using the MASTER VOLUME buttons on the remote control. On the front panel use the MASTER VOLUME dial.
Basic Operation

Selecting the Input Signal

This button selects the type of input signal, AUTO, ANALOG or DIGITAL, sent to the receiver. You need to take special care to switch to the appropriate input when necessary. For example, the switch would have to be on DIGITAL to hear digital sources like Dolby Digital or DTS but it would have to be on analog to record from the ANALOG out jacks on the receiver. The default setting is AUTO which will select from either DIGITAL or ANALOG depending on what inputs are available.

1 Press the MULTI CONTROL (or INPUT) on the remote to select a source component.

2 Press RECEIVER.

3 Press the SIGNAL SELECT button to select the input signal corresponding to the format of the source component.

Each press switches the signal in the order below:

AUTO → ANALOG → DIGITAL

Memo:

- When DIGITAL signal is selected, DIGITAL lights when a Dolby Digital signal is input; DTS lights when a DTS signal is input.
- If no digital inputs are assigned (see page 81) you can only choose ANALOG in the SIGNAL SELECT.
- Because the audio signal from a karaoke microphone and LDs are recorded with analog audio only, they are not output from the digital outputs. Set SIGNAL SELECT to ANALOG to listen to these formats.
- When an LD with DTS is played back with the SIGNAL SELECT set in ANALOG, digital noise caused by playing back the DTS signal directly (with no decoding) is output. To prevent noise, you need to make digital connections (See pages 22 and 23) and set SIGNAL SELECT to AUTO or DIGITAL.
- Some DVD players don’t output DTS signals. For more details, refer to the instruction manual supplied with your DVD player.
- When using DIGITAL IN terminals the following digital signal formats are supported: Dolby Digital, DTS and PCM (32, 44.1, 48, 88.2 and 96 kHz sampling frequencies).
Listening Modes

The three listening mode types on the receiver are explained here (to select listening modes see page 43). The kind of playback you can get in the three modes depends on what kind of a source (DVD, etc.) you are using. The basic distinction is between 2 channel sources and multichannel sources. The MOVIE and MUSIC modes that are available to you will also differ according to your source and which SB CH MODE you choose. This is explained below as well.

For home theater the MOVIE and MUSIC listening modes are designed to deliver realistic and powerful multichannel surround sound that recreates the movie theater or concert experience. The first four MOVIE modes (THX CINEMA, PRO LOGIC II (MOVIE), PRO LOGIC, NEO:6 CINEMA) and first two MUSIC modes (PRO LOGIC II MUSIC, NEO:6 MUSIC) incorporate pure decoding of the signal. That is, they present it as it was recorded in the sound studio. The other modes are DSP modes. They add some type of effect to the signal. You may need to experiment with these modes to see which suit your home system and personal tastes.

The MUSIC and STEREO modes are designed to be used with music sources but some MUSIC modes are also suitable for film soundtracks. Again, try different modes with various soundtracks to see which you like but you must choose one of the MOVIE and MUSIC listening modes in order to get surround sound.

Depending on your setup, in STEREO mode only the front two speakers, and sometimes the subwoofer (if you have one), are used.

Stereo modes

When a source is played in this mode, it plays through just the front left and right speakers (and possibly your subwoofer depending on your speaker settings). Dolby Digital and DTS multichannel sources are downmixed to stereo.

**STEREO**

In STEREO mode the audio plays according to the surround setup settings and you can still use ACOUSTIC CAL EQ, DIGITAL NR, MIDNIGHT, LOUDNESS, AUDIO SCALER mode, and TONE Control functions.

**DIRECT**

In DIRECT mode, the audio bypasses all types of signal processing to remain as close to the source audio quality as possible.

Memo:

If you switch on ACOUSTIC CAL EQ, DIGITAL NR, MIDNIGHT, LOUDNESS, AUDIO SCALER mode, and TONE Control when DIRECT is selected, the receiver automatically switches to STEREO.
Basic Operation

MOVIE modes (SURROUND mode)
The MOVIE mode is a newly designed system for enhancing movie soundtracks and other audio-visual sources that optimizes its effects in accordance with your source, SB CH MODE and speaker configuration. The first four modes are for pure decoding of multichannel sound sources. With these modes the receiver will automatically employ the format of the sound source (for example, Dolby Digital or DTS). With two channel sources these first four modes will create surround channels. Next, there are six PIONEER original sound modes that use DSP (Digital Signal Processing) to create different types of sound environments as described below.

THX CINEMA
THX is a set of technical standards created by Lucasfilm Ltd. These standards were designed to emulate a film sound stage and thus reproduce, with the greatest possible accuracy, the soundtrack intended by the filmmakers.

PRO LOGIC II MOVIE (PRO LOGIC II MOVIE)*
This mode gives 5.1 channel surround sound. It is suitable for movies, especially those recorded in Dolby Surround. The channel separation and movement of surround effects is comparable to Dolby Digital 5.1. With sources other than stereo (5.1, etc.) the display will automatically show the type of decoding being employed (Dolby Digital, DTS-ES, etc.).

PRO LOGIC*
This mode gives 4.1 channel surround sound. It is less sensitive to the quality of the source material, so may be useful when PRO LOGIC II MOVIE or PRO LOGIC II MUSIC modes do not give good results. With sources other than stereo (5.1, etc.) the display will automatically show the type of decoding being employed (Dolby Digital, DTS-ES, etc.).

NEO:6 CINEMA*
This mode gives 6.1 channel surround sound and is suitable for movies. The NEO:6 CINEMA mode delivers good channel separation for movie soundtracks. With sources other than stereo (5.1, etc.) the display will automatically show the type of decoding being employed (Dolby Digital, DTS-ES, etc.).

ACTION
This mode is designed for action movies, which generally use lots of sound effects. The mode enriches the sound to make it more realistic and extends the parameters to pick up high and low sound effects.

SCI-FI
This mode is designed for science fiction movies. It creates a broad sound space, separating dialog from sound effects to heighten the overall impact of the soundtrack.

DRAMA
This mode is designed for movies with a lot of dialog. The elements of dialog are enhanced, making the characters seem more real. The mode also compresses the dynamic range somewhat so loud sounds do not overpower softer ones (compare this with the MIDNIGHT listening mode explained on page 50).

MUSICAL
This mode is primarily for music and adds a spacious feeling to the sound. A long delay time of reflected sounds provides resonant tones which emulate a concert hall.

MONOFILM
This mode is designed for older movies which are recorded with mono soundtracks. The special sound processing of this mode will allow you to experience these movies in surround sound even though they were not recorded that way originally.

5/7-D THEATER
This mode is especially designed to give sound depth to stereo sources. The overall effect builds a dynamic and broad sound space, allowing two-channel (stereo) signals to faithfully imitate a five speaker sound. The mode should be used in conjunction with Dolby Pro Logic for sources bearing the PRO LOGIC mark. The display will show either 5-D THEATER or 7-D THEATER according to the source, SB CH MODE and speaker configuration.

* When you input a multichannel signal the decoding is done automatically so you cannot choose these modes.
The MUSIC modes allow you to transform your living room into a variety of different sonic environments when playing either two-channel or multichannel sources. It optimizes its effects in accordance with your source, SB CH MODE and speaker configuration. The first two modes are for pure decoding of multichannel sound sources. With these modes the receiver will automatically employ the format of the sound source (for example, Dolby Digital or DTS). With two channel sources these first two modes will create surround channels. Then there are five PIONEER original sound modes that use DSP (Digital Signal Processing) to create different types of sound environments as described below. Lastly, the 5/7-CH STEREO mode simply outputs a stereo signal through all of your speakers.

**PL II MUSIC (PRO LOGIC II MUSIC)**
This mode gives 5.1 channel surround sound and is suitable for music. Compared to the Movie Mode PRO LOGIC, the surround effect is more enveloping. With sources other than stereo (5.1, etc.) the display will automatically show the type of decoding being employed (Dolby Digital, DTS-ES, etc.).

**NEO:6 MUSIC**
This mode gives 6.1 channel surround sound and is suitable for music. The NEO:6 MUSIC mode plays the stereo source as is through the front left/right speakers, and generates a natural, ambient surround and center sound. With sources other than stereo (5.1, etc.) the display will automatically show the type of decoding being employed (Dolby Digital, DTS-ES, etc.).

**CLASSICAL**
Simulates the acoustic effects of a large concert hall. Suitable for classical music. A long delay time of reflected sounds, coupled with reverb effects, let the listener experience the dynamic and rich sounds characteristic of concert halls and powerful orchestral performances.

**CHAMBER**
Simulates the acoustic environment of a very resonant concert hall. Rich reverberation and a full sound create the impression of a lively performance space.

**JAZZ**
Simulates the acoustic effects of a jazz club. Reflected sound is virtually below 100 msec so that the listener can experience a live band effect.

**ROCK**
Simulates the acoustic effects of a mid-sized concert hall. The listener can experience a live band effect with good separation of the instruments, a strong bass and the vivid feeling of a live performance.

**DANCE**
Simulates the acoustic effects of a dance club. Features a strong bass sound. Reflected sound delay time is virtually below 50 msec, for the listener to experience the visceral power of dance music.

**5/7CH STEREO**
Simulates the acoustic environment of a regular stereo while using all the speakers in the system to induce a rich, all-around sound. The display will change to 5-CH STEREO or 7-CH STEREO according to the SB CH MODE and speaker configuration.

* When you input a multichannel signal the decoding is done automatically so you cannot choose these modes.
Basic Operation

Adjusting the Effect of a Listening Mode

The DSP (Digital Signal Processing) listening modes have sound processing added to accentuate a certain kind of atmosphere or effect (see the preceding pages for explanation). You can choose if you want to strengthen or weaken this effect in the given mode. The DSP MOVIE modes are: ACTION, SCI-FI, DRAMA, MUSICAL, MONOFILM, 5/7-D THEATER. The DSP MUSIC modes are: CLASSICAL, CHAMBER, JAZZ, ROCK, DANCE, 5/7CH STEREO.

1 Press RECEIVER.

2 Press the EFFECT/CH SEL button repeatedly until you see EFFECT in the receiver’s display.

3 Use the +/- buttons to add or subtract the amount of effect.
   The amount of effect can be adjusted from 10 to 90.
   Memo:
   • The default setting for 5/7CH STEREO is 90.
   • The default setting for other modes is 50.

Adding/Adjusting the Effect in Dolby Pro Logic II Music Mode

The Dolby Pro Logic II Music mode has three settings you can choose from which adjust the spatial feeling of the surround sound. These settings are best matched to each individual source instead of one setting being left on for all sources. The three settings and how to apply them are explained here. To start this setup select Dolby Pro Logic II (if necessary) with the MUSIC button.

1 Press RECEIVER.

2 Press the EFFECT/CH SEL button repeatedly and select the setting you want. They appear in the receiver’s display.
   CENTER WIDTH: With Pro Logic decoding center channel signals can come only from the center speaker. If no center speaker is present this channel is split between the two front speakers, creating a “phantom” channel. The CENTER WIDTH feature lets you adjust the center channel so it can heard only from the center speaker, only as a “phantom” channel or in varying degrees of both.
   DIMENSION: This allows you to adjust the soundfield towards the front or towards the rear of your room.
   PANORAMA: This gives the music a wraparound surround feel.

3 Use the +/- buttons to add or subtract the amount of effect or turn on/off.
   CENTER WIDTH: Strengthen or weaken the effect between 0–7. The default is 3.
   DIMENSION: Move soundfield backward or forward with -3 being the furthest back and +3 being the furthest forward. The default is 0.
   PANORAMA: Turn on or off. The default is off.
Listening with ACOUSTIC CAL EQ

You can listen to the soundtrack with the ACOUSTIC CAL EQ you set automatically when you did the AUTO SURROUND SETUP (page 13) or you set manually on (page 89). To do so follow the instructions below.

1 Press the ACOUSTIC EQ button.

Each press switches ACOUSTIC CAL EQ between ALL CH ADJUST, FRONT ALIGN, CUSTOM 1, CUSTOM 2, and OFF. When ACOUSTIC EQ is being applied the MCACC indicator lights.

MEMO:
- After completing the AUTO SURROUND SETUP (page 13) ACOUSTIC EQ ON (ALL CH ADJUST) is set automatically.
- You can’t turn on ACOUSTIC EQ on in MULTI CH IN mode.
- If you turn ACOUSTIC EQ on in DIRECT mode, the receiver automatically switches to STEREO mode.

Digital Noise Reduction (DIGITAL NR Function)

To reduce extraneous noise switch on DIGITAL NR. This feature is effective with sources containing a lot of background noise like cassette and video tape.

1 Press RECEIVER.

2 Press the DNR button on the remote control.

Each press switches DIGITAL NR on or off. When on, DNR lights in the display.

MEMO:
- In cases described below, noise may not be reduced even if DIGITAL NR is on.
  - Sudden noise
  - Extremely loud noise
  - Signals that contain too many high frequencies
  - Signals which are very clean to begin with
- DIGITAL NR is effective at levels shown below for each source.
  - STEREO
    - Analog input ............................................. 10-18 dB
    - Digital input .............................................. 10-15 dB
    - AM/FM tuner .............................................. 10-15 dB
    - MOVIE/MUSIC ............................................. 6-10 dB
- Depending on the condition of the source, there may not be a noticeable improvement in the quality of the sound.
- You can’t use the DIGITAL NR mode with the THX CINEMA, MULTI CH IN modes or source signals greater than 88.2kHz over a digital connection.
- If you set the DIGITAL NR on in DIRECT mode the receiver will switch to STEREO mode.
Basic Operation

Listening in MIDNIGHT Mode

This useful feature makes it possible to get excellent surround sound effects even when listening at low volumes. It can be used with any surround sound source and play soundtracks so that the quieter sounds are audible even while playing a soundtrack at low volumes. This feature is applicable only when the master volume is under –20 dB.

1 Press the MIDNIGHT button on the remote control.

Each press switches MIDNIGHT mode on or off. When on, MIDNIGHT lights in the display.

Memo:
• The surround effect adjusts itself automatically in accordance with the volume level.
• You can’t use the MIDNIGHT mode with the THX CINEMA, MULTI CH IN or LOUDNESS modes.
• If you set MIDNIGHT on when in DIRECT mode the receiver switches to STEREO mode.

Listening in LOUDNESS Mode

The LOUDNESS mode boosts the bass and treble in a signal. It is useful for listening to music at low volumes. This feature is applicable only when the master volume is under –20 dB.

1 Press RECEIVER.

2 Press the LOUDNESS button on the remote control.

Each press switches LOUDNESS mode on or off. When on, LOUDNESS lights in the display.

Memo:
• You can’t use the LOUDNESS mode with the THX CINEMA, MULTI CH IN or MIDNIGHT modes.
• If you set LOUDNESS on in DIRECT mode the receiver will switch to STEREO mode.
Adjusting Bass and Treble

You can adjust the low (bass) and high (treble) frequencies. The TONE button can also be used to bypass the tone circuitry.

1 Press RECEIVER.
2 Press the TONE button on the remote control or the front panel to put the receiver in tone adjust mode.
   Pressing the TONE button changes the mode to either on or off. When the mode is set to on, TONE appears in the display.
3 Press the BASS/TREBLE button repeatedly to select BASS or TREBLE.
   If TONE: BYPASS appears, press the TONE button to get TONE: on.
4 Use the +/- buttons to adjust the low or high frequency levels.
   A few seconds after you finish adjusting the tone the receiver will revert to the sound mode it was in at the beginning of the process.

Memo:
• The tone control can be adjusted in a range of ±6 dB.
• The tone control cannot be set on in THX CINEMA, MULTI CH IN modes.
• If you set TONE control on in DIRECT mode the receiver will switch to STEREO mode.

Listening with Sound Delay

Some video displays have a slight delay in presentation of the video. Using sound delay you can slow the presentation of the sound to match the presentation of the video.

1 Press RECEIVER.
2 Press the EFFECT/CH SEL button repeatedly until you see DELAY in the receiver’s display.
3 Use the +/- buttons to add or subtract the amount of delay.

Memo:
• The amount of delay changes in 0.1 frame steps from 0.0 – 6.0 frame. (The default setting value is 0.0 frame.)
• When in DIRECT or MULTI CH IN modes, sound delay cannot be used.
Basic Operation

Listening in Audio Scaler mode

Use to hear CD and DVD, as well as other digital soundtracks, at a wider dynamic range, allowing for finer audio reproduction.

1 Press RECEIVER.

2 Press the HI-BIT button on the remote control or HI-BIT/HI-SAMPLING button on the front panel.

Each press switches AUDIO SCALER mode on or off. HI-BIT/SAMPLING lights in the display.

Memo:
- This mode cannot be used with MULTI CH IN mode.
- If the receiver is in DIRECT mode and you press the HI-BIT button the receiver will switch to STEREO mode.
- This feature cannot be used with source signals greater than 88.2kHz over a digital connection.
Multi Channel In Playback

MULTI CH IN allows you to connect a DVD-Audio/SACD player or an external decoder to enjoy certain multichannel discs. To use MULTI CH IN playback follow the instructions below.

1 Press the MULTI CH INPUT button on the remote control or the MULTI CH IN button on the front panel.

Each press switches the input between the previous mode and MULTI CH IN.

ON: This is a true playback of the signal from the MULTI CH IN terminals, output without digital processing. You can only control each channel level.

OFF: Cancels the MULTI CH IN modes.

Memo:
- You can’t use any kind of sound processing with MULTI CH IN. Selecting a listening mode, or switching these modes, cancels the MULTI CH IN.
- If any speakers are set to NO the signal for that (those) channel(s) won’t get output at all.
- You cannot set sound features (page 49, 50, 51 and 52) on, in MULTI CH IN mode.
- You cannot listen to the SECOND ZONE in MULTI CH IN mode.
- If you’re listening to DVD-Audio/SACD but can only get stereo sound set your DVD player’s 5.1 channel analog playback to on.
Surround Back Channel Modes

Surround Back Channel Mode

The SB CH MODE makes available surround back channels through your surround back speakers. You must have chosen NORMAL SYSTEM in the SURRBACK SYSTEM setting (see page 37) and have SURROUND and SURROUND BACK speakers set to something other than NO (see page 39) to use this feature. To accomplish the same settings, you could have had the AUTO SURROUND SETUP automatically set the SURROUND and the SURROUND BACK speakers on (see page 13).

1 Press the SB CH MODE button on the remote control. Each press switches between ON, OFF and AUTO.

- **ON:** surround back channels are available with all SURROUND modes.
- **AUTO:** same as above except whether SURROUND BACK channels are available with any of the PRO LOGIC II (or PRO LOGIC) modes depends on whether the source has an EX or ES flag or not. With the NEO:6 modes surround back channels will always be available.
- **OFF:** SURROUND BACK channels will not be heard.

Virtual Surround Back Mode

The virtual surround back mode emulates surround back channels through your surround speakers. You must have chosen NORMAL SYSTEM in the SURRBACK SYSTEM setting (see page 37); have SURROUND speakers set to something other than NO, and have chosen NO for the SURROUND BACK speakers in SPEAKER SETTING (see page 39) to use this mode. To accomplish the same settings, you could have had the AUTO SURROUND SETUP automatically set the SURROUND speakers on and the SURROUND BACK speakers off (see page 13) to use this mode.

1 Press the SB CH MODE button on the remote control. Each press switches between VIRTL SB ON, VIRTL SB OFF and VIRTL SB AUTO.

- **VIRTL SB ON:** virtual surround back sound is available with all SURROUND modes except THX CINEMA; for a stereo signal you must choose the NEO:6 MOVIE/MUSIC SURROUND mode or a Pioneer original sound mode (see pages 46 and 47).
- **VIRTL SB AUTO:** same as above except whether virtual surround back sound is available with any of the PRO LOGIC II (or PRO LOGIC) modes depends on whether the source has an EX or ES flag or not. With the NEO:6 modes virtual surround back sound will always be available.
- **VIRTL SB OFF:** virtual surround back sound will not be heard.

Memo:
- You can’t use the SB CH MODE with MULTI CH IN or STEREO/DIRECT modes.
- You can’t use the virtual surround back mode with the THX CINEMA, MULTI CH IN, STEREO/DIRECT modes.
- This feature cannot be used when playing source signals greater than 88.2kHz over a digital connection.
- When using the virtual surround back mode with the SURROUND modes, +VSB will show in the display.
Dual Mono setting and playback

The dual mono setting can only be used when listening to Dolby Digital or homemade discs that have dual mono software encoded in them. Dual mono software usually is used to put two different mono soundtracks, that you can listen to together or separately, on one DVD. With this setting you can choose which dual mono setting you want to listen to. Remember this setting is only applicable if you are using Dolby Digital software with dual mono and want to isolate one of the channels therein.

1 Press the RETURN button for more than three seconds to put the receiver in DUAL MONO mode.

Hold down the RETURN button to cycle through the different DUAL MONO settings. When you find the one you want release the button. The L (ch1) and R (ch2) indicators in the display light to indicate the playback channel.

The different settings are: DUAL CH1, where you only hear channel 1; DUAL CH2, where you only hear channel 2; and DUAL CH1/CH2, where you hear both channels, but independently from different speakers.

Memo:
- The default setting is DUAL CH1.
- You can only use this function with Dolby Digital sources that have this encoding.

Using Headphones

1 Plug headphones into the PHONES jack on the front of the receiver.

No sound will be audible from the speakers when headphones are plugged in except in MULTI CH IN mode or when using the pre-outs. In MULTI CH IN mode the subwoofer will be audible even if the headphones are plugged in.

Memo:
- All SURROUND modes will be downmixed to 2 channels.
- If you’re listening to a 2 channel source there will be no matrix decoding (i.e. you will not be able to get surround sound decoding).
- For MULTI CH IN mode, only the FRONT L and R channels can be heard.
Basic Operation

Video Select

This function allows you to listen to one sound source while you watch a different video source on your TV. The sound source is set in the normal fashion as explained on page 43. You then change the video input with the VIDEO SEL button.

1 Press RECEIVER.

2 Press the VIDEO SEL button on the remote control to cycle through the different possible video inputs.

The first press shows the video input you are currently using. After that pressing VIDEO SELECT cycles through the possibilities in the following order:

- OFF
- VCR1/DVR
- VCR2
- TV/SAT
- VIDEO
- DVD/LD

The OFF setting means you are listening without a video signal. (Also, when you select CD, CD-R/TAPE1, MD/TAPE2, TUNER or LINE the VIDEO SELECT will be set to off.)

Memo:

- The VIDEO SELECT remains set to the input you chose until you change the audio input.
- If you change audio functions the receiver will reset itself to make the video and audio inputs correspond. Also, if you switch the power of the receiver off when you turn it back on the video and audio inputs will reset so that they correspond.

Adjusting the Brightness of the Display (DIMMER)

Use the display DIMMER button to adjust the brightness of the fluorescent display.

1 Press RECEIVER.

2 Use the display DIMMER button on the remote control to alternate between the different levels of brightness for the display.

Four levels of brightness ranging from very dim to very bright can be selected. Also, when set to very dim, the MCACC indicator will turn off.

Memo:

It is a feature of this unit that the fluorescent display will be brighter for a few seconds after you choose a function (like DVD/LD, CD, etc.) and then get softer. This will still happen when you adjust the brightness but the new setting will be the one the display softens to.
Using the Tuner

Automatic and Manual Tuning

The following steps show you how to tune in FM and AM radio broadcasts using the automatic (search) and manual (step) tuning functions. If you already know the exact frequency of the station you want, see “Direct Access Tuning” on the following page.

1 Press the TUNER button.

On the remote, this selects the tuner function on the receiver and sets the remote to the tuner operation mode.

2 Press the BAND button to select the band (FM or AM).

Each press switches the band: FM ↔ AM

3 Tune in the station.

For Automatic Tuning
Press and hold TUNING –/+ for about one second, then release.
The tuner starts searching the selected band and stops automatically at the first station it locates. Repeat to locate other stations.

For Manual Tuning
- To change frequencies one step at a time, press TUNING –/+ repeatedly.
- To change frequencies quickly, hold down TUNING –/+ and release when you reach the frequency you want.

MPX Mode

If the TUNED or STEREO indicators do not light when tuning an FM station, because the station is too far away or the broadcast signal is weak, press MPX on the remote control to switch to MONO reception. This should improve reception enough for you to enjoy the broadcast.
Using the Tuner

Direct Access Tuning

The following steps show you how to tune directly to a specific frequency using the remote control.

1. Press the TUNER button.  
   This selects the tuner function on the receiver and sets the remote to the tuner operation mode.

2. Press the BAND button to select the band (FM or AM). 
   Each press switches the band: FM ↔ AM

3. Press the D.ACCESS button to activate the direct access tuning mode. 
   The cursor blinks in the display on the front panel.

4. Use the number buttons to enter the frequency of the station you want. 
   Example: 
   To tune station 106.00 (FM), press: 1 → 0 → 6 → 0 → 0

   To cancel before inputting the frequency 
   Press D.ACCESS, and enter the frequency again.
Memorizing Frequently Used Stations

The following steps show you how to memorize up to 30 radio stations in 3 classes (each holding 10 stations). When memorizing FM frequencies, the receiver also memorizes the MPX mode (STEREO or MONO).

1 **Tune in the station you want.**
   
   See “Automatic and Manual Tuning” on page 57 or “Direct Access Tuning” on page 58.

2 **Press the TUNER EDIT button to activate the memory function.**

3 **Press the CLASS button repeatedly to select a class number.**
   
   Each press switches the display:
   
   CLASS A → CLASS B → CLASS C

4 **Press the ST –/+ buttons repeatedly (or use the MULTI JOG) to select a channel (0~9) within the respective class.**

5 **Press the ENTER button to input your choice.**
   
   To continue, repeat steps 1-5.
Using the Tuner

Naming Memorized Stations

You can input a name of up to four characters for each preset station in the receiver’s memory (see the previous page). This name can be anything you choose. For example, you could input JAZZ for that station and when you listen to it the name, rather than the frequency number, will appear on your display.

1 Press the TUNER button on the remote control.

2 Press CLASS repeatedly to select the class.
   Repeatedly pressing this button cycles through the three available classes, A, B and C.

3 Press ST + or ST – to select the preset channel.

4 Press TUNER EDIT to select the station name mode.

5 Enter the station name you want.
   Names can be up to four characters long.
   • Use the MULTI JOG dial (front panel) or the ST +/- buttons (remote) to select characters.
   • Press ENTER to confirm a character. If no character is input, a space is input.
   To erase a station name, simply repeat steps 1-4 and input four spaces instead of a name.

6 Press ENTER when you have got the characters you want to enter.
   Repeat steps 2 to 5 to memorize up to 30 preset broadcast station names.

Memo:
To change a station name, enter a new name over the top of the existing one.
Recalling Memorized Stations

1 Press the TUNER button.
This selects the TUNER function on the receiver and sets the remote to the TUNER operation mode.

2 Press the CLASS button repeatedly to select a class number.
Each press switches the display:

   CLASS A → CLASS B → CLASS C

3 Use the number buttons to select the channel you want.
To select channel 7, press 7.
To select channel 0, press 0.
For example: If 99.50 MHz (FM) was memorized in class B at channel 7.

To step through each channel in order
Press the ST +/- buttons repeatedly.
Remote Control of Other Components

Setting Up the Remote Control to Control Other Components

In addition to controlling the receiver, the supplied remote control can operate your other components (VCR, TV, DVD, CD, etc.) after you program it to do so. If your component(s) are listed in the remote control’s memory, simply follow the steps below. If your component(s) are not listed, or if you want the remote to learn additional operations, you can use the learning mode to input the information from the remote controls supplied with your other components.

Recalling Settings Stored in the Remote Control

The following steps show you how to recall the setting stored in the remote control. Once a setting is recalled and the component assigned, you can use this remote to easily operate the component.

Memo:
- To exit from the remote control setup mode at any time, press REMOTE SETUP.
- See page 64 to operate your other components.

1 While holding down the REMOTE SETUP button press 1 to select the preset recall setup mode.
   The LED begins to blink.
   To cancel the preset recall setup mode press REMOTE SETUP.

2 Press the MULTI CONTROL button for the component you want to control.
   The LED lights continuously.
   The TUNER button cannot be assigned.

3 Point the remote toward the component to be controlled, enter the 4 digit setup code (see page 104 for codes).
   The LED blinks.
   After a code has been input the power of the component being input will turn on or off.
   The remote will return to the previous mode after thirty seconds of inactivity.
   The power of the component being input will only turn on or off if that component is able to be turned on directly by remote control.
   Repeat steps 2 through 3 to assign preset codes for as many components as necessary.
   If you can’t get your component to respond to any of the codes you can still program the component into the remote control using the procedure in the next section.

4 Press the REMOTE SETUP button to exit the preset recall setup mode.
   The remote control and receiver return to their previous operation modes.
Remote Control of Other Components

Programming Signals from Other Remote Controls (LEARNING Mode)

If preset codes are not available for your component(s), or the available preset codes do not operate correctly, you can use this procedure to program in signals from the remote control(s) of your other component(s). These steps can also be used to add further operations to the remote control that were successfully set with the stored settings (see page 62).

Memo:
- To exit from the remote control setup mode at any time, press REMOTE SETUP.
- Some commands cannot be programmed.

---

1. While holding down the REMOTE SETUP button press 2 to select the learning setup mode.
   The LED begins to blink.
   To cancel the learning setup mode press REMOTE SETUP.

2. Press the MULTI CONTROL button for the component you want to control.
   The LED lights continuously.
   The TUNER button cannot be assigned.

3. Press the button to be programmed.
   The LED blinks rapidly.
   The TV, TV INPUT SELECT, TV CHANNEL +/- and TV VOLUME +/- buttons are only available for learning when programming TV CONTROL operations.

4. Point the remote controls at each other and press the button on the other remote control for the operation you wish to program.
   1. Point the remote controls toward each other.
   2. Press the button on the other remote control corresponding to the operation you wish to program.
   The LED will turn off and then light again.
   To program additional operations for the current component, repeat steps 3 and 4.
   To program operations for another component, go back to step 2.

5. Press the REMOTE SETUP button to exit the learning setup mode.
   The remote control and receiver return to their previous operation modes.

Memo:
- The above operations are available from the receiver’s remote control after you program it (see page 62).
- To perform these operations, press the MULTI CONTROL button for the component you want to control.
- For more information on individual commands consult the manual that came with the component.
- The first four buttons on the table “Cable TV/Satellite TV/Digital TV/TV operations” are dedicated to control the TV assigned to the TV CONT button. Thus if you only have one TV hooked up to this system, assign it to the TV CONT button. If you have two TVs, assign the main TV to the TV CONT button. If you hook up your system this way, the first four TV controls will always be accessible.
- Depending on the maker and individual model, there are some buttons that may not be able operate some equipment or may operate it in a different way.
Remote Control of Other Components

Setting up the Direct Function

The direct function is designed in case you have an external video source connected to your TV (a video source that is not going through the VSX-53TX). For this explanation we'll call this the external video deck. You'd like to control external video deck with this unit's remote control so you've assigned it a function button (for example purposes, the VCR 2 button). Yet, if you put the receiver in VCR 2 mode you'll get no picture on your TV because the external video deck signal is not going through the VSX-53TX. To get around this problem you set the direct function for VCR 2 to OFF. Now when you press VCR 2 function button you can control the external video deck with the remote but the receiver does not go into VCR 2 mode.

1 While holding down the REMOTE SETUP button press 4 to select the direct function setup mode.

The LED begins to blink.
To cancel the direct function setup mode press REMOTE SETUP.

2 Press the MULTI CONTROL button of the component whose direct function you want to turn on or off.

The LED lights and remains lit.
For example, if you want to turn off direct function for VCR 2, you would press VCR 2.
The TUNER button cannot be assigned.

3 Set the direct function of each external source to OFF by pressing 2, ON by pressing 1.

The LED blinks.
ON: The direct function is on.
OFF: The direct function is off.
For example, if you want to turn off direct function for VCR 2, you would press 2.

4 Repeat steps 2-3 to set the direct function for as many components as you want.

5 Press the REMOTE SETUP button to exit the direct function setup mode.

Memo:
• To exit from the REMOTE SETUP at any time, press REMOTE SETUP.
• The default setting for all direct functions is ON.
Using Other Functions

Recording from Audio/Video Components

The following explanations show you how to make a recording from one component to another connected to this receiver. Note that an analog recorder (such as a VCR) cannot record from a source that is connected using only a digital connection. Likewise, a digital recorder (such as a CD-R) cannot record digitally from a component that is connected using only analog connections. In both of these cases, make sure that the digital component also has analog connections to the receiver, and that the SIGNAL SELECT is set to ANALOG.

When recording from one digital component to another, bear in mind that the digital signal output from this receiver mirrors the input from the source. So if the input is, say, Dolby Digital, the output will also be Dolby Digital. Before recording, make sure that the recorder is compatible with the source digital audio format.

See page 20 for more on analog audio connections and page 22 for digital audio connections.

Memo:
- The receiver's volume, channel level, balance, TONE, DIGITAL NR, MIDNIGHT, LOUDNESS, ACOUSTIC EQ and surround effects have no effect on the recorded signal.
- In some cases, digital recordings have copy guard protections and making a digital copy is not possible. In this case you can only copy them in an analog manner.
- Some video recordings are copy-protected; these sources cannot be recorded.
- When recording video, the source must be connected to the receiver using the same type of video cord (composite, or S video) as you used to connect the recorder to the receiver.

1 Turn on the receiver.

2 Press the MULTI CONTROL (or INPUT) on the remote to select a source component.

3 Press RECEIVER.

4 Press the SIGNAL SELECT button to select the input signal (ANALOG or DIGITAL).

5 Start recording (tape deck, CD recorder, VCR, etc.)

6 Playback the source to be recorded.
SECOND ZONE (Speaker System B) Setup

Stereo playback in another room

This setup enables you to listen to a pair of stereo speakers independently of the main speaker system (A speakers) hooked up to the receiver. The VSX-53TX has two possibilities for playback in another room. You can choose SECOND ZONE, and use the speakers hooked up to the surround back terminals as a B speaker system, that is, playing the same source as the main speaker system but from independent stereo speakers. Or, you can choose MR&S and use the speakers hooked up to the surround back terminals for MULTI-ROOM playback (see pages page 70 for more on MULTI-ROOM).

1 Connect a pair of speakers to the surround back speaker terminals.

2 Select SECOND ZONE or MR&S (MULTI-ROOM) in the SURRBACK SYSTEM setup (see page 37).

Memo:
Please use speakers with a nominal impedance rated 8 Ω - 16 Ω.

SPEAKERS Button

If you selected NORMAL SYSTEM in the SURRBACK SYSTEM setup (see page 37) your surround back speakers will be used as part of your A speakers (main speaker system) and this button will simply switch it off or on. If you selected MR&S in the SURRBACK SYSTEM setup (see page 37) the surround back speakers will be used for the MULTI-ROOM and this button will simply switch A speakers (main speaker system) on or off. If you selected SECOND ZONE in the SURRBACK SYSTEM setup (see page 37) this button will cycle through the A (main) speaker system, the B speaker system (the surround back speakers acting as a separate second zone), both speaker systems, and off.

1 Press the SPEAKERS button (on the front panel) to switch speakers on/off or cycle through the different speaker systems if SECOND ZONE has been selected in the SURRBACK SYSTEM setup (see page 37).

A(SP▶A): Sound is output from speaker system A and the same signal is output from the pre out terminals.

B(SP▶B): Sound is output from the two speakers in speaker system B (the surround back speakers). Multichannel sources won’t be heard from these speakers.

A&B(SP▶AB): Sound is output from speaker system A and the B speakers. Multichannel sources will be downmixed to two channels.

OFF(SP▶): No sound is output from the speakers. Depending on the input signal and settings in SPEAKER SETTING sound may be output from the subwoofer. The same sound is output from the pre out terminals as when selecting speaker system A (above).

Memo:
• What is output from the subwoofer depends on the SPEAKER SETTING settings and the type of source.
• Depending on the settings in SPEAKER SETTING and the MULTI CH IN SELECT, output from the SURROUND BACK pre out terminals may change.
• When using headphones the speakers are switched off.
• Please use speakers with a nominal impedance rated 8 Ω - 16 Ω.
Connecting Additional Amplifiers

This receiver has more than sufficient power for any home use, but it is possible to add additional amplifiers to every channel of your system. Make the connections shown below to add amplifiers to power your speakers. Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.

*The arrows indicate the direction of the signal.

Memo:
- You can use the additional amplifier on the surround back channels for a single speaker as well. In this case plug the amplifier into the L (SINGLE) terminal only.
- The sound from the surround back terminals will depend on how you have set up the SURRBACK SYSTEM (see page 37).
Using Other Functions

MULTI ROOM function

To use this receiver with a MULTI ROOM setup you need an external IR receiver. When used together with an IR receiver (not included), this receiver is capable of outputting two different sources at the same time. One to the VIDEO OUT jack and SPEAKERS terminals and another to the MULTI ROOM & SOURCE AUDIO and VIDEO OUT jacks. Thus the VSX-53TX can power two independent systems, in separate rooms, listening to or watching different sources. With this system the two rooms can have completely independent power (the main room power can be off while the sub room is on) and the sub room can be controlled by this unit's remote control. If you go into the main room to change the source but forget the remote control it's not a problem. While in MULTI ROOM mode the input selector on the front panel of the VSX-53TX is able to change the input even though the receiver is off.

MULTI ROOM connections

On the VSX-53TX, connect the IR receiver sensor to the MULTI ROOM & SOURCE REMOTE IN jack, then connect a separate amplifier (and speakers) and TV monitor to the MULTI ROOM & SOURCE AUDIO and VIDEO OUT jacks. All of this equipment should be placed in your sub-room as shown below.

Memo:
- When connecting the IR receiver, be sure to connect it to the green MULTI ROOM & SOURCE REMOTE IN jack, not the black CONTROL IN or OUT jacks.
- It is not possible to input digital signals into the sub room. You must use an analog signal.
- You can’t use tone controls (etc.) or any surround modes in the sub room.

Setup example

Sub room (IR receiver, amplifier, speakers and TV monitor)  
Main room (Receiver, source components, front, center, and surround speakers, TV monitor etc.)

Setup example when MR&S is selected in the SURRBACK SYSTEM (see page 37)

Memo:  
If you use the above setup controlling the main room source will affect the sound in the sub room. When a function (like DVD) is chosen or an operation (like pushing ►) is done the sound in the sub room will be temporarily interrupted.
**MULTI ROOM setup**

1. Turn on the receiver, your TV and press RECEIVER on the remote control.
   Make sure your TV is set to the receiver.

2. Press the SYSTEM SETUP button.
   The SYSTEM SETUP menu appears on the OSD.

3. Use the ▲▼ buttons to select MULTI ROOM. Press ENTER.

4. VOLUME LEVEL should be selected (if it isn’t use the ▲▼ buttons to select it). Press ENTER.
   Use the ▲▼ buttons to select the VOLUME LEVEL, VARIABLE or FIXED. Press ENTER.
   If you hook up a just a power amplifier in the sub room the VSX-53TX will act as a pre-amp. In this case choose VARIABLE. If you hook up a full integrated amplifier in the sub room (such as another Pioneer VSX receiver) choose FIXED.

   **CAUTION!**
   If the MULTI ROOM is set to FIXED the volume on the main unit will be set to maximum. Thus, when output, it will be extremely loud. Please set the master volume controls of the integrated amplifier in the sub room very low at first and experiment to find the correct volume.

5. IR RECEIVER should be selected (if it isn’t use the ▲▼ buttons to select it). Press ENTER.
   Use the ▲▼ buttons to select the IR RECEIVER type, PIONEER or OTHERS. Press ENTER.
   If you have an IR receiver from a different company than PIONEER, select OTHERS. However, if selecting OTHERS doesn’t seem to work, try selecting PIONEER.

6. Use the ▲▼ buttons to select EXIT, then press ENTER to go back to the SYSTEM SETUP menu.

7. Use the ▲▼ buttons to select EXIT and press ENTER.
   You will exit the SYSTEM SETUP menu and return to normal operation.

**Memo:**
- There may be some IR receivers that can’t be used with this receiver. Check with a PIONEER representative to be sure.
- If you selected MR&S in the SURRBACK SYSTEM setting on page 37 you won’t be able to set the VOLUME LEVEL.
Using Other Functions

Controlling the MULTI ROOM system from the main room

1. Press the MULTI ROOM & SOURCE ON/OFF button to turn on the MULTI ROOM system.
   The display shown below will illuminate when the receiver is in STANDBY mode. Also, the MULTI-ROOM indicator will light.

2. Press the CONTROL button to enter the control mode.
   All operations regarding the sub-room MUST be made while MULTIROOM appears in the receiver’s display. Once it reverts to its previous display any adjustments will affect the main room, not the sub room.

3. Select the source with the MULTI JOG and adjust the volume.
   You can adjust the volume level in the following range:
   VARIABLE: –60dB to 0dB
   When using the surround back terminal: –80dB to +12dB
   FIXED: (cannot be adjusted)
   For this example we’ll use the DVD/LD function. The display shown below will illuminate.

   The MULTI JOG steps through the functions in the following order:
   DVD/LD → TV/SAT → VCR1/DVR
   TUNER → CD-R/TAPE1 → CD

4. When in TUNER function, press the CLASS button and use STATION –/+ to select the station.
   The display will appear as shown below.

   Press CONTROL at any time to exit the control mode of the MULTI ROOM system.
   Press MULTI ROOM & SOURCE ON/OFF button at any time to turn off the MULTI ROOM system.

Memo:
If you don’t turn the MULTI ROOM function off the receiver will not turn off completely.
1 From the sub room, point the remote control at the IR Receiver and press a \( \Diamond \) STANDBY/ON button to turn on the MULTI ROOM system. The MULTI ROOM & SOURCE indicator lights on the front panel in the main room.

2 Press the INPUT button to select the sub room source. You can also use a specific MULTI CONTROL button (for example, the DVD/LD button) for this purpose.

3 Press VOLUME +/- to adjust the volume. The following remote control buttons can be used to operate the receiver from the sub room.
   - \( \Diamond \) RECEIVER button
   - MULTI CONTROL button (will not select MD/TAPE2, VCR 2 or VIDEO)
   - MASTER VOLUME +/- buttons (for adjusting the sub-room’s volume level, but can’t be used when set to FIXED)
   - CLASS button (for selecting the memory class you want)
   - ST +/- button (for recalling memorized radio stations (the tuner is selected automatically))
   - Number button (0~9)

Memo:
- Make sure the system is in STANDBY mode or ON.
- When someone is controlling the system from the main room you won’t be able to operate the remote room controls.
- When you are doing the REMOTE SETUP process the MULTI ROOM cannot be used.
- If you use a PIONEER amplifier in the sub room, when you want to control the VSX-53TX only you will also change the settings in the sub room. To avoid this, cover up the remote sensor on the sub room amplifier.
Using Other Functions

Memo:
- Remote operation may not be possible if direct light from a strong fluorescent lamp is shining on the IR receiver remote sensor window.
- The tuner cannot be tuned to more than one station at a time. Therefore, changing the station in one room also changes the station in the other room. Please be careful not to change stations when recording a radio broadcast.
- The volume levels of the main and sub rooms are independent.
- When more than one remote control signal is transmitted at the same time, the receiver does not operate.
- When operating MULTI ROOM & SOURCE with the MULTI ROOM & SOURCE OUT jacks connected to a sub room amplifier which bears the PIONEER component with an CONTROL terminals and has a remote sensor, both the IR receiver and the amplifier may receive remote control commands (making correct operation impossible). In this case, place the IR receiver and amplifier apart from each other, and point the remote control directly at the IR receiver during operation.
- If you plan to leave the MULTI ROOM feature off for a lengthy period please turn off the power in both the sub and main rooms. Make sure the STANDBY indicator turns red and the MULTI ROOM indicator goes off.
- If you send the SYSTEM OFF command from the sub room by remote control, the power of both rooms will go off. Please be careful when making a recording in the main room.

The PIONEER SR System: Operating other PIONEER components

Connecting an optional control cord allows you to operate other PIONEER components simply by pointing the receiver's remote control at the remote sensor on the front panel of the receiver. The receiver then sends the remote control signals to the other devices via the CONTROL OUT terminal.

Memo:
- You can also control PIONEER components (and those made by other manufacturers) by pointing the receiver's remote control directly at the respective component. This type of operation does not require control cords. All you have to do is recall the appropriate stored settings (see page 62).
- If you use a remote control hooked up via the CONTROL IN jack with a control cord, you won't be able to use this unit's remote control.
- If you use this feature make sure an analog (audio and/or video) connection has been made between the units.
Multi Operations

Multi operations allow you to tell the receiver and your other components to do a number of things with the push of only two buttons on the remote control. For example, you can program the unit to turn on your TV, turn on your DVD player and start playing the loaded DVD. This allows you to freely decide which operations you want performed as well as the order in which you want them performed. The steps below show you how to program a string of up to 5 different operations for each MULTI CONTROL button. You don’t need to program power commands for this receiver or any other Pioneer components. They will automatically turn on when a multi operation is performed.

(Programming Pioneer video components automatically turns on Pioneer TVs.)

Memo:
- Be sure to set up each component before programming multi operations (see “Setting Up the Remote Control to Control Other Components” on page 62).
- To exit from the REMOTE SETUP mode at anytime press the REMOTE SETUP button.

1. While holding down the REMOTE SETUP button press 3 to select the multi operation setup mode.
   - The LED begins to blink.
   - To cancel the multi operation setup mode press REMOTE SETUP.

2. Select a MULTI CONTROL button for this multi operation.
   - The LED lights and remains lit.
   - Each MULTI CONTROL button can be used for one multi operation. If a multi operation relates to using a DVD player, for example, it makes sense to select the DVD/LD button.

3. Press the MULTI CONTROL button for the component that will perform the step in the multi operation, then press the operation button you want.
   - For example, press CD then ► (play), if you want to start CD playback.

Buttons that can be programmed with Multi Operations
Using Other Functions

4 Repeat step 3 to input multi operations to the MULTI CONTROL button you pressed in step 3.
You can repeat this process for up to five commands. For example: you could enter the following three operations using the preceding step 3.
1. Press the TV CONT button and TV  to turn on your TV (as explained above).
2. Press the DVD/LD button then SOURCE  to turn on your DVD player (if it is not a PIONEER product).
3. Press the DVD/LD button then  (play) to start playing the DVD player.
When you employ multi operations (see below), these three tasks will be performed in the same order.

5 Press the REMOTE SETUP button to exit the multi operation setup mode.
The remote control return to their previous operation modes.

Performing Multi Operations
Do the following to use the multi operations.

1 Press the MULTI OPERATION button.

2 Press the MULTI CONTROL button for the component that has been set up with multi operations.
The power of the receiver (and any Pioneer components use in the program) goes on and the programmed multi operations are performed automatically.
System Off

The SYSTEM OFF feature allows you to tell the receiver and your other components to stop and/or turn off with the push of only one button on the remote control. The steps below show you how to program a string of up to 5 different SYSTEM OFF operations. Be sure to set up each component before programming SYSTEM OFF operations (see “Setting Up the Remote Control to Control Other Components” on page 62).

Memo:
To exit from the REMOTE SETUP mode at anytime press the REMOTE SETUP button.

1 While holding down the REMOTE SETUP button press 3 to select the SYSTEM OFF setup mode.

The LED begins to blink.
To cancel the SYSTEM OFF setup mode press REMOTE SETUP.

2 Press the RECEIVER button.

The LED lights and remains lit.

3 Select a MULTI CONTROL button for SYSTEM OFF.

Each MULTI CONTROL button can be used for SYSTEM OFF. If a SYSTEM OFF command relates to using a DVD player, for example, it makes sense to select the DVD/LD button.

4 Press the SOURCE button of the component to be set with SYSTEM OFF operations.

5 Press the REMOTE SETUP button to exit the SYSTEM OFF setup mode.

The remote control return to their previous operation modes.

Using SYSTEM OFF

Do the following to use the SYSTEM OFF function.
The SYSTEM OFF feature allows you to tell the receiver and your other components to stop and/or turn off with the remote control. Most Pioneer components will automatically turn off. The receiver itself will go off automatically as well.
The following Pioneer components can be turned off using the SYSTEM OFF function:
DVD, DVD-Recorder, LD, CATV, CD, CD-R, MD, Satellite Tuner, Tape, Tuner, VCR, and TV.

1 Press the MULTI OPERATION button and within 5 seconds press the RECEIVER button.

All the Pioneer components connected to the receiver and the receiver will stop and/or go off.
Using Other Functions

Resetting the Remote Control

Erasing Multi Operations

1. Press and hold both the REMOTE SETUP button and 8 for more than 3 seconds.
   LED lights will blink 3 times and all multi operation settings will be erased.

Erasing Learning Remote Control Commands

1. Press and hold both the REMOTE SETUP button and 9 for more than 3 seconds.
   LED lights will blink 3 times and all learned remote control commands will be erased.

Erasing All Remote Control Settings

1. Press and hold both the REMOTE SETUP button and 0 for more than 3 seconds.
   LED lights will blink 3 times and all remote control settings will be erased.
Resetting the Main Unit

The following operations allow you to reset the unit to the default settings.

1. While holding down the TONE button press the STANDBY/ON button for about three seconds.
2. When you see RESET? appear in the display, press the TONE – button. OK? appears in the display, press TONE +.

When OK appears in the display all the settings, including the speaker, surround sound settings and tuner settings, will be reset in the unit to the default settings.

Memo:
- When resetting the receiver make sure the MULTI-ROOM feature is off.
- If the receiver is disconnected from a power source for about a month or longer it will reset to the default settings.
Fine Tuning Your System

THX CINEMA Setup

This setup lets you choose which decoding method for 2 channel sources the receiver will use for THX CINEMA. For more information on the decoding (playback) formats see "Techno Tidbits" starting on page 96.

1 Turn on the receiver and your TV, press RECEIVER on the remote control.

2 Press the SYSTEM SETUP button.

3 Looking at the on-screen display on your TV, use the ▲▼ buttons to select THX CINEMA SETUP. Press the ENTER button.

4 Use the ▲▼ buttons to choose either PRO LOGIC II MOVIE, PRO LOGIC or NEO:6 CINEMA as the decoding method. Press the ENTER button.

   The default is PRO LOGIC II MOVIE.

5 EXIT should be selected (if not, use the ▲▼ buttons to select it). Press ENTER.

6 Use the ▲▼ buttons to select EXIT and press ENTER, again.

   This exits the SYSTEM SETUP mode and returns to normal operation.
Assigning the Digital Inputs

If you did not hook up your digital equipment in accordance with the default settings for the digital inputs (see pages 17, 19 and 22) you need to complete the procedure below. You have to do this in order to tell the receiver what digital equipment is hooked up to which terminal so the buttons on the remote correspond to what you have hooked up.

1 Turn on the receiver and your TV, press RECEIVER on the remote control.

2 Press the SYSTEM SETUP button.

3 Looking at the on-screen display on your TV, use the ▲▼ buttons to select INPUT ASSIGN. Press the ENTER button.

4 DIGITAL–IN SELECT should be selected, if not use the ▲▼ buttons to select it. Press the ENTER button.

5 Use the ▲▼ buttons to move through the different digital inputs and press the ENTER button.

6 Use the ▲▼ buttons select the component that you hooked up to that digital in. Press the ENTER button.

   If you're not sure which component is connected to which digital in, look on the back of the receiver and check the cables you connected.

7 When you're finished use the ▲▼ buttons to select EXIT and press ENTER.

   This exits the DIGITAL–IN SELECT mode.

8 Use the ▲▼ buttons to select EXIT and press ENTER. Then, use the ▲▼ buttons to select EXIT and press ENTER again.

   This exits the SYSTEM SETUP mode and returns to normal operation.

Memo:

- The possible digital inputs that can be assigned are: DVD/LD, TV/SAT, VCR1, VCR2, CD, CD-R, MD.
- If you assign a digital input to a certain function (for example DVD/LD) then any digital inputs previously assigned to that function will automatically be set to OFF. This is because one function cannot be assigned to two different places.
Assigning the Component Video Inputs

This receiver has two component video inputs. Their default settings are video inputs for the DVD/LD (COMPONENT VIDEO IN 1) and TV/SAT (COMPONENT VIDEO IN 2) functions, but you can reassign them if you want to use them as video inputs for other receiver functions (for example a VCR).

See pages 16 and 17 for more on connecting equipment using component video cords.

1. Turn on the receiver and your TV, press RECEIVER on the remote control.
2. Press the SYSTEM SETUP button.
3. Looking at the on-screen display on your TV, use the ▲▼ buttons to select INPUT ASSIGN. Press the ENTER button.
4. Use the ▲▼ buttons to select COMPONENT–IN SELECT then press ENTER.
5. Use the ▲▼ buttons to select the component video input you want to reassign. Press the ENTER button.
6. Use the ▲▼ buttons to assign a receiver function.
   Choose between DVD/LD, TV/SAT, VCR1 and VCR2.
7. When you’re finished use the ▲▼ buttons to select EXIT and press ENTER.
   You will leave the COMPONENT–IN SELECT mode.
8. Use the ▲▼ buttons to select EXIT and press ENTER. Then, use the ▲▼ buttons to select EXIT and press ENTER again.
   This exits the SYSTEM SETUP mode and returns to normal operation.

Memo:
If you connect any source component to the receiver using a component video input, you should also have your TV connected to this receiver’s component video output.
Function Rename

Use the FUNCTION RENAME capability to rename the display on the receiver and your OSD for different functions (DVD, etc.). For example, you could rename VCR1/DVR as DVR-7000. For this particular setup using the controls on the front panel is more convenient than using the remote control. Use the MULTI JOG dial instead of the ▲▼ buttons and use the ENTER button on the front panel. You can also use the display on the front panel as opposed to the OSD.

1 Turn on the receiver and your TV. (If you want to use the remote control for this setup, press the RECEIVER button.)

2 Press the SET UP button.

3 Looking at the display on your receiver, use the MULTI JOG to select FUNCTION RENAME. Press the ENTER button.

4 Use the MULTI JOG to select the name of the function (for example, DVD/LD) you want to change. Press ENTER.

5 Use the MULTI JOG to cycle the cursor through the letters, numbers and symbols. Use the ENTER button to enter one of the possibilities or move forward a space.

6 Repeat step 5 until you get the name as you want it.

7 Press ENTER repeatedly to exit the name. The new function name is set.

8 Repeat steps 4-7 to change other function names. Use the MULTI JOG to select EXIT and press ENTER.

9 Use the MULTI JOG to select EXIT and press ENTER.

This exits the SYSTEM SETUP mode and returns to normal operation.

Memo:
Use the RETURN button to move the cursor back one character when entering a name.

3-9 2 RETURN button

The possible selections are shown below.

ABCDEFGHIJKLMNOPQRSTUVWXYZ
abcdefghijklmnopqrstuvwxyz
0123456789
!"#$%&'()*+,-./:;<=>?@\]^_`{|} [space]
Fine Tuning Your System

12V TRIGGER function

This feature allows you to hook up equipment (for example, a relay device) to this receiver that will send a power signal automatically when you select the function turned on here (for example, DVD/LD). To use this feature follow the steps below.

1. Turn on the receiver and your TV, press RECEIVER on the remote control.
2. Press the SYSTEM SETUP button.
3. Looking at the on-screen display on your TV, use the ▲▼ buttons to select 12V TRIGGER. Press the ENTER button.
4. Use the ▲▼ buttons to select the component you want to use the 12V trigger with (for example, DVD/LD). Press ENTER.
5. Use the ▲▼ buttons to select the ON or OFF. Press ENTER.
   ON: 12V TRIGGER function is activated.
   OFF: 12V TRIGGER function is not activated.
6. Repeat steps 4 and 5 to set 12V TRIGGER for as many terminals as you want.
7. Use the ▲▼ buttons to select EXIT and press ENTER. EXIT should be selected (if not, use the ▲▼ buttons to select it). Press ENTER.

This exits the SYSTEM SETUP mode and returns to normal operation.

Memo:
- Use a mono mini cord to hook up the 12V TRIGGER equipment.
- DC OUT12V/100mA is the maximum power.
EXPERT System Settings

EXPERT Setup

The settings here can only be done if you’ve performed the more basic preliminary setups. Thus, before doing these settings do either AUTO SETTING on page 13 or NORMAL setup page 38. These settings are to further heighten your surround sound. They are not absolutely necessary but may give more defined and enjoyable surround sound. You can decide if you want to make these settings or not. You only need to make these settings once (unless you change the placement of your current speaker system, add new speakers or components to your system, etc.). These setup operations use your TV to display the settings and choices so be sure your TV and receiver are properly hooked up.

1. Turn on the receiver and your TV, press RECEIVER on the remote control.

Make sure your TV is set to the receiver.

2. Press the SYSTEM SETUP button.

The menu possibilities appear on your TV.

3. SURROUND SETUP should be selected (if it’s not use the ▲▼ buttons to select it). Press the ENTER button.

4. Select EXPERT with the ▲▼ buttons. Press the ENTER button.

5. Follow the order below to make expert settings. Use the ▲▼ buttons to navigate through the menus. When you have the setting you want in particular menu, press ENTER.

In each mode, the current settings are displayed on the screen.

CROSSOVER NETWORK (page 86)
This feature determines which frequencies will be sent to the subwoofer (or large speakers).

FINE CHANNEL LEVEL (page 87)
This feature balances the sound output level of your speakers more finely than in the NORMAL setup.

FINE CHANNEL DELAY (page 88)
This feature adjusts the delay level of your speakers more finely than in the NORMAL setup.

ACOUSTIC CAL EQ (page 89)
This feature allows you to adjust the amount of a certain frequency in a soundtrack, acting as a kind of room equalizer for your speakers.

BASS PEAK LEVEL (page 94)
Dolby Digital and DTS audio sources include ultra-low bass tones. Set the bass peak level as needed to prevent the ultra-low bass tones from distorting the sound from the speakers.

D-RANGE CONTROL (page 95)
This feature makes possible excellent surround sound effects when listening to Dolby Digital and DTS sources at low volumes.
Expert System Settings

Crossover Network

Crossover frequency is the point where the receiver divides the high and low sounds (the frequencies) between the speakers. Certain bass sounds will play back from the subwoofer if you selected it as YES (or PLUS) or from the front speakers if you selected them as LARGE. This setting decides where the cutoff will be between those bass sounds playing back from the speaker selected as above and the bass sounds for the entire soundtrack, which play back from all speakers used.

If all speakers are set to LARGE (see page 39) this setup is unnecessary.

Follow steps 1-5 on page 85, if necessary, to get to the starting point mentioned here.

1. CROSSOVER NETWORK should be selected, if it isn’t use the ▲▼ buttons to select and press ENTER.

2. Use the ▲▼ buttons to select frequency cut off point. Press ENTER.

   Frequencies below the cut off point will be sent to the subwoofer (or large speakers). For example, choosing 50 Hz sends bass frequencies below 50 Hz to the subwoofer (or large speakers).

3. EXIT should be selected (if it’s not use the ▲▼ buttons to select it). Press ENTER.

   Next, proceed to FINE CHANNEL LEVEL.
   If you want to change a setting before proceeding start over from step 1.

Memo:
The default is 80Hz.
Expert System Settings

Fine Channel Level

The following steps show you how to balance the sound output level of your speakers more finely than in the NORMAL setup (see page 38). Proper speaker balance is essential for obtaining high quality surround sound and the better the speaker balance the better surround sound you can get.

Follow steps 1-5 on page 85, if necessary, to get to the starting point mentioned here.

1 FINE CHANNEL LEVEL should be selected, if it isn’t use the ▲▼ buttons to select and press ENTER.

2 Use the ▲▼ buttons to adjust the level of the left channel. Press ENTER.

WARNING: Be prepared! The test tones are output at a high volume level. MASTER VOLUME rotates to the reference position (0 dB) and after a few seconds the test tone is output.

3 Use the ▲▼ buttons to select the subsequent channel. Press ENTER.

4 Adjust the level of the channel using the ▲▼ buttons.

Adjust the channel level from –10dB to +10dB in 0.5dB increments. The default setting is 0dB.

Try to get the volume level of the target speaker to match that of the front left speaker, which is the reference level. Adjust so that you hear both tones at the same volume.

When you press ENTER you will automatically go to the next channel.

5 Press ENTER to select a new channel. Repeat step 3 for every channel.

If you want to change a setting before proceeding use the ▲▼ buttons to go back to the channel you want to adjust and press ENTER. Then follow step 3.

6 When done select EXIT (if it’s not already selected) and press ENTER.

Next, if you want, proceed to FINE CHANNEL DELAY.
Expert System Settings

Fine Channel Delay

The following steps show you how to adjust the delay level of your speakers more finely than in the NORMAL setup (see page 38). Adding a slight delay to some speakers is necessary to achieve proper sound depth, separation as well as an effective surround sound effect.

Follow steps 1-5 on page 85, if necessary, to get to the starting point mentioned here.

1 **FINE CHANNEL DELAY** should be selected, if it isn’t use the ▲▼ buttons to select and press ENTER.

2 Use the ▲▼ buttons to adjust the distance of the left channel. Press ENTER.
   This channel will be the target reference which you use to measure the other channels.

3 Use the ▲▼ buttons to select the subsequent channel. Press ENTER.
   Test tones will be output for the channel you want to adjust and a reference channel.
   Listen to the reference channel and use it to measure the target channel.

4 Adjust the distance of each channel using the ▲▼ buttons.
   Listen to the reference channel and use it to measure the target channel. Stand facing the two speakers with your arms outstretched pointing at each speaker. Try to make the two tones sound as if they are arriving simultaneously at a position slightly in front of you and between your arm span. The distance can be set within a range of 0.5 to 45 feet in 0.5 foot steps.
   When you press ENTER you will automatically go to the next channel.

5 Press ENTER to select a new channel.
   Repeat step 4 for every channel.
   If you want to change a setting before proceeding use the ▲▼ buttons to go back to the channel you want to adjust and press ENTER. Then follow step 3.

6 When done select EXIT (if it’s not already selected) and press ENTER.
   Next, if you want, proceed to ACOUSTIC CAL EQ.
Expert System Settings

Acoustic Calibration EQ

This receiver lets you choose between two types of ACOUSTIC CAL EQ equalizer curves: ALL CH ADJUST and FRONT ALIGN, with the former equalizing the speakers individually and the latter equalizing the speakers in accordance with the front speakers. Features here allow you to put in your own equalizer preferences. To do this use the DATA COPY feature to copy the settings in ALL CH ADJUST and FRONT ALIGN modes and paste them into CUSTOM 1 or CUSTOM 2. You then choose between the ALL CH ADJUST and FRONT ALIGN types of curves and increase the amount of a certain frequency in each speaker in accordance with your preferences. When you playback a source you can choose CUSTOM 1 or CUSTOM 2 to apply your preferences to playback. When setting up using the ALL CH ADJUST mode you can adjust each speaker individually. With the FRONT ALIGN mode the front speakers will serve as the reference so you cannot adjust them.

The DATA CHECK feature allows you to see how the settings in ALL CH ADJUST and FRONT ALIGN currently stand. When you use ACOUSTIC CAL EQ function (see page 49) you can toggle between the two basic settings, ALL CH ADJUST and FRONT ALIGN, and the variations you set yourself, CUSTOM 1 and CUSTOM 2.

To use the EQ AUTO SETTING feature follow the steps here. Follow steps 1-5 on page 85, if necessary, to get to the starting point mentioned here.

Memo:
If you have already performed AUTO SETTING (page 13), this setting is not necessary.

1 ACOUSTIC CAL EQ should be selected. If it isn’t use the ▲▼ buttons to select and press ENTER.

2 EQ AUTO SETTING should be selected. If it isn’t use the ▲▼ buttons to select and press ENTER.

3 Select START and then press ENTER to start EQ AUTO SETTING.

Make sure you have hooked up the microphone and moved obstacles to the speakers out of the way. If you have a subwoofer make sure it is turned on and has the volume turned up.

WARNING: The test tones are very loud!! Make sure there are no infants or small children in the room and that no one will be scared, upset or injured by loud noise is present. You yourself may want to wear earplugs. It is possible to lower the volume of test tones, but this could result in incorrect speaker settings.

When done !! FINISH !! will appear on the screen. After they have finished, move to the next step.

DATA COPY: You can store the settings in CUSTOM1 or CUSTOM2 by selecting DATA COPY and pressing ENTER. (For information on subsequent operations, see step 3 on the following page.)

CHECK: If you like to view the settings, select CHECK and then press ENTER. By selecting NEXT repeatedly, you can view the settings for each channel.

4 When done select EXIT (if it’s not already selected) and press ENTER.

Leave the setup by using the ▲▼ buttons to select EXIT and pressing ENTER. You can now go to another ACOUSTIC CAL EQ setting by using the ▲▼ buttons and pressing ENTER. The MCACC indicator will light.
Expert System Settings

To start the process use DATA COPY to paste the ALL CH ADJUST or FRONT ALIGN settings into CUSTOM 1 or CUSTOM 2.

Follow steps 1-5 on page 85, if necessary, to get to the starting point mentioned here.

1  ACOUSTIC CAL EQ should be selected, if it isn’t use the ▲▼ buttons to select and press ENTER.

2  Use the ▲▼ buttons to select DATA COPY. Press ENTER.

3  Use the ▲▼ buttons to select CUSTOM 1 or CUSTOM 2 as the destination you want to copy the data to. Press ENTER.

4  Use the ▲▼ buttons to select ALL CH ADJUST or FRONT ALIGN as the type of curve you want to copy. Press ENTER.

   When you press ENTER the data is copied to the destination you chose.
   After you have done this process once you can also copy data in CUSTOM 1 or CUSTOM 2.

5  When done select EXIT (if it’s not already selected) and press ENTER.

   You can now adjust the settings in CUSTOM 1 or CUSTOM 2.
For explanation purposes the illustrations use ALL CH ADJUST.

1
Acoustic Cal EQ

- [EQ AUTO SETTING]
  - [CUSTOM ADJUST]
  - [DATA COPY]
  - [DATA CHECK]
  - [Exit]

2

Acoustic Cal EQ

- [ALL CH ADJUST]
  - [FRONT ALIGN]
  - [Exit]

3

ALL CH ADJUST

- [Left EQ]
  - [Right EQ]
  - [Surround EQ]
  - [Surround Back EQ]
  - [Surround Side EQ]
  - [Exit]

4

Center EQ

- [83Hz] [+1.58]
- [151Hz] [+2.58]
- [33Hz] [+0.58]
- [4kHz] [+0.58]
- [11.3kHz] [+0.58]
- [THM] [±0.08]
  - [Exit]

This explanation is for CUSTOM 1 or CUSTOM 2.

1 The four possibilities should be on the OSD. Use the ▲▼ buttons to select CUSTOM 1 or CUSTOM 2. Press ENTER.

2 Use the ▲▼ buttons to select ALL CH ADJUST or FRONT ALIGN and press ENTER.

   The test tones will sound.

   WARNING: the test tones are very loud!! Make sure there are no infants or small children in the room and that no one who will be scared, upset or damaged by loud noise is present. You yourself may want to wear earplugs.

   Here the terms ALL CH ADJUST and FRONT ALIGN represent two types of equalizer methods that emphasize different characteristics of the sound.

   ALL CH ADJUST: In this method all the speakers (except for the subwoofer) are independent. The settings that were input when you did the AUTO SURROUND SETUP (see page 13) will be present but you can adjust each speaker individually to suit your taste. The test tones for each channel will sound individually.

   FRONT ALIGN: In this method all speakers (except for the subwoofer) are set in accordance with the settings of the FRONT speakers. The settings that were input when you did the AUTO SURROUND SETUP (see page 13) will be present but you can adjust each speaker individually to suit your taste. This setting allows the listener to enjoy a sound balance defined by the front speakers. The front left speaker will serve as the reference tone. The front left tone and the target speaker (the one you are trying to adjust) will sound in turns, so you can judge which needs to be louder.

3 Use the ▲▼ buttons to select the channel that you want to adjust. Press ENTER.

   For FRONT ALIGN you won’t be able to adjust the FRONT speakers.

4 Use the ▲▼ buttons to select the frequency you want to adjust. Press ENTER.

   For the speakers you set to SMALL (see page 39) you won’t be able to adjust the 63 Hz setting.
**Expert System Settings**

5 Use the ▲▼ buttons to adjust the frequency. When you have it at the level you want press ENTER.

Set the frequencies within the –6 dB to +6 dB range in steps of 0.5 dB. If OVER appears in the display you have set the levels too high. Reduce them until OVER disappears.

6 The cursor automatically goes to the next frequency. Press ENTER and repeat steps 4 and 5 to adjust all the frequencies.

7 TRIM should be selected (if it isn’t use the ▲▼ buttons to select it) and press ENTER.

8 Use the ▲▼ buttons to adjust the TRIM and press ENTER.

TRIM will balance the volume level of each frequency in the overall volume of that speaker.

9 EXIT should be selected (if it isn’t use the ▲▼ buttons to select it) and press ENTER.

10 The cursor automatically goes to the next channel. Press ENTER and repeat steps 3 – 8 to adjust all the channels.

11 EXIT should be selected (if it isn’t use the ▲▼ buttons to select it) and press ENTER.

Leave the setup by using the ▲▼ buttons to select EXIT and pressing ENTER. You can now go to DATA CHECK or leave the ACOUSTIC CAL EQ setting by using the ▲▼ buttons to select EXIT and pressing ENTER.
To use the DATA CHECK feature follow the steps here.

1. Use the ▲▼ buttons to select DATA CHECK. Press ENTER.

2. Select either ALL CH ADJUST or FRONT ALIGN as the data you want to check. Press ENTER.

3. Use the ▲▼ buttons to select the channel that you want to check. Press ENTER.
   That channel appears so you can check the setting.

4. When that channel has been checked, use the ▲▼ buttons to select the EXIT and press ENTER.

5. Repeat step 3 and 4 to check all the channels.

6. When all channels have been checked select EXIT (if it's not already selected) and press ENTER.
   Leave the setup by using the ▲▼ buttons to select EXIT and pressing ENTER. You can now go to another ACOUSTIC CAL EQ setting by using the ▲▼ buttons and pressing ENTER.
Bass Peak Level

The LFE (Low Frequency Effect) channel in Dolby Digital and DTS program sources can produce heavily concentrated ultra-low bass tones that may exceed the capabilities of your speaker system. The following steps show you how to limit the peak level for the LFE channel. If continuing from the preceding page the BASS PEAK LEVEL should be selected.

Follow steps 1-5 on page 85, if necessary, to get to the starting point mentioned here.

1 BASS PEAK LEVEL should be selected, if it isn’t use the ▲▼ buttons to select and press ENTER.

2 Use the ▲▼ buttons to select SETTING START or SETTING CANCEL. Press ENTER.
   SETTING START: The MASTER VOLUME is set to -80, a test tone plays back and you make the setting (go to step 3).
   SETTING CANCEL: This setting won’t limit the peak level of the LFE channel.

   If you selected SETTING CANCEL go to step 4.

3 Use the ▲▼ buttons to adjust the test tone and specify the bass peak level.
   1 Raise the level gradually.
   2 Set the bass peak level at the point just before the tone starts to distort.

   Be careful! Test tones play back at loud volumes. Make sure there are no infants or small children in the room.

   You can leave this setup any time by pressing ENTER.

   If the YES or PLUS setting on the subwoofer is selected the test tone will only play back from the subwoofer. If not, the test tone will play back from all speakers set to LARGE except for the subwoofer.

4 Press ENTER.
   The display on the receiver will show FADE and then RESUME while the MASTER VOLUME returns to its original position.

5 EXIT should be selected (if it isn’t use the ▲▼ buttons to select it), press ENTER.
   If you want to change a setting before proceeding Start over from step 1.
   Next, if you want, proceed to D-RANGE CONTROL.
Dynamic Range Control

This feature makes it possible to enjoy full surround sound effects on Dolby Digital and DTS sources even at low volumes. It does this by compressing the dynamic range. Dynamic range is the difference between the loudest and the softest sounds in any given signal. Compressing the range plays sounds so the quieter ones are audible and the louder ones don’t get distorted or become overpowering. This feature only applies to Dolby Digital and DTS sources but the MIDNIGHT mode (see page 50) accomplishes the same end for a variety of sources. If continuing from BASS PEAK LEVEL, D-RANGE CONTROL should be selected.

Follow steps 1-5 on page 85, if necessary, to get to the starting point mentioned here.

1 D-RANGE CONTROL should be selected, if it isn’t use the ▲▼ buttons to select and press ENTER.

2 Use the ▲▼ buttons to choose either OFF, MID or MAX. Press ENTER.
   Dynamic Range Control is set.
   OFF: No Dynamic Range Control
   MID: A moderate amount of Dynamic Range Control is applied.
   MAX: The most Dynamic Range Control available is applied.

3 EXIT should be selected (if it isn’t use the ▲▼ buttons to select it), press ENTER.
   If you want to change a setting before proceeding Start over from step 1.

4 You are now finished with EXPERT SETUP, EXIT should be selected (if it isn’t use the ▲▼ buttons to select it), press ENTER.

5 EXIT in SURROUND SETUP menu should be selected (if it isn’t use the ▲▼ buttons to select it), press ENTER.

6 Use the ▲▼ buttons to select EXIT in the SYSTEM SETUP menu, press ENTER.

   The receiver returns to normal operation.

Memo:
The default is OFF.
Dolby

Dolby Digital

Dolby Digital is a discrete digital surround format used for multichannel surround sound. It was developed after the Dolby Surround System and Dolby Pro Logic Surround System. Dolby Digital is a high quality digital sound format that is used by many theatrical film releases.

Other features include:
1) Downmixing on playback for compatibility with mono, stereo, Dolby Pro Logic and 5.1 channel audio.
2) A wide range of bitrates and channels.
3) Decoding dynamic range information and adjusting the dialog level in the soundtrack (called Dialog Normalization, see below for more information).

Dialog Normalization

When a Dolby Digital soundtrack is played back the Dialog Normalization function of the receiver activates automatically. Dialog Normalization is a Dolby Digital function that establishes the average dialog level for the program source being played. If the receiver's level does not match the average dialog level, first you see “DIAL NORM” and “OFFSET +4 dB” (as an example) appear in the receiver's display. In this example, the number +4 dB is the difference between the receiver's gain structure and the Dolby Digital average dialog level. To match the average dialog level, subtract or add the OFFSET level. For example, if the OFFSET level is +4 dB, the amplifier's output is 4 dB over the average recorded level.

Dolby Pro Logic II

Dolby Pro Logic II is an improved version of Dolby Pro Logic technology with extended matrix decoding technology that can create 5.1 channel sound from two channel sources. Dolby Pro Logic II creates basic 5 channel sound by using the innovative “steering logic” circuit. Therefore when listening to typical two-channel sources like CD, the listener can enjoy a richer spatial effect. When using software encoded with Dolby Surround, this decoding system affords the listener an improved surround experience with greater sound detail.

Dolby Digital Surround EX

This new recording technology is able to play 6.1 channel sound and was developed in a collaboration between Dolby Laboratories and Lucasfilm, Ltd. for the film "Star Wars: The First Episode", the first movie ever to be made with Dolby Digital Surround EX technology. In a movie theater this format affords the listener vivid surround sound experience replete with the effect of sounds flying overhead, even for those seated towards the sides of the theater. Dolby Digital Surround EX contains surround back channels which are dubbed into the soundtrack in studio. The channels are encoded into the left and right channels of the soundtrack so this format can be compatible with Dolby Digital 5.1 channel decoding. For a list of movies that contain Dolby Digital Surround EX soundtracks see Dolby website at: http://www.dolby.com

DTS

DTS

In this system, 6 channels of digital sound are recorded on CD-ROM. DTS adopts a simultaneous playback format. With a low rate of compression of sound signals and a high rate of transmittance, a higher sound quality format is produced. For this reason, the format is being introduced in more and more movie theaters, and is being adopted for home use as DTS Digital Surround. When used with movies it's called DTS-CD DVD and for music software (5.1 channel CD) as DTS-CD.
DTS-ES
DTS launched a new surround format in November 2000. This has come to be known as DTS Extended Surround or simply DTS-ES. The technology has been advanced to include two new home formats DTS-ES Discrete 6.1 format, and DTS-ES Matrix 6.1 ch format, both are able to playback discrete, 6.1-channel content from DVDs and CDs. Both of these formats are compatible with a conventional DTS 5.1 ch decoder. In this system each channel is encoded and decoded individually, adding to the separation of the channels. Since DTS adds a third surround channel, the surround back channel, the realism and all-encompassing nature of the sound reaches levels not seen before in home theater. This unit is equipped with a DTS-ES decoder.

DTS Neo:6
This is a matrix decoding technology that transforms two-channel sources into 6.0 channel surround sound. There are two modes, CINEMA mode and MUSIC mode.

DTS 96/24
For compatibility with equipment that was produced before this format was made, DVD players can play this software using a conventional DTS 5.1ch decoder. This unit is equipped with a DTS 96 kHz/24 bit decoder to take advantage of the higher sound quality available.

THX
THX is a Lucasfilm, Ltd. program dedicated to maximum accuracy in movie presentation. Movie sound tracks are recorded in large movie dubbing stages using movie theater equipment. For a sound track to be presented accurately in your home, special technologies are required. In your home the room is much smaller and has a bright sound, the speakers are very different and there are only six-eight of them, plus, you sit much closer to each one of those speakers. Because of these differences we often miss the power and emotion that thrills us in a good movie. Now Pioneer and THX have teamed up to bring the full glory of accurate cinema sound to the comfort and convenience of your home.

Re-Equalization™: In a theater the room is very large and dead sounding, you sit a long way back from the speakers and the speakers themselves are very specialized. Because a sound track recorded in this dead sounding space when it is played at home it sounds overbright. THX Re-Equalization adjusts for this difference in a very precise way.

Adaptive Decorrelation™: When a sound track sends mono sound to the surround speakers it often seems to be coming come from one side instead of from all around you as it would in a theater. Adaptive Decorrelation helps to correct this inaccuracy.

Timbre Matching™: When recording a sound track it is very important that the surround sounds move smoothly and seamlessly around the theater. It is very distracting when sounds seem to jump from speaker to speaker. Timbre Matching helps to smooth the movement of the surround sounds even though you are using only two speakers.

Bass Peak Level Manager™: Some Dolby Digital sound tracks can produce bass peaks that are undesirable in a home theater environment. The Bass Peak Level Manager allows you to set the maximum peak levels appropriate to your system. Set this function according to the Bass Peak Level instructions (page 94).

Loudspeaker Position Time Synchronization™: This feature allows you to adjust for the difference in the distance from each individual loudspeaker to the listening position. Doing this ensures that all the speakers operate in precise synchronization improving the seamless nature of the soundfield. Set this function according to the Speaker Distance instructions (page 42) or Fine Channel Delay instructions (page 88).

THX Surround EX™: THX Surround EX—Dolby Digital Surround EX is a joint development of Dolby Laboratories and the THX division of Lucasfilm Ltd.

This product may also engage the “THX Surround EX” mode during the playback of 5.1 channel material that is not Dolby Digital Surround EX encoded. In such case the information delivered to the Surround Back channel will be program dependent and may or may not be very pleasing depending on the particular soundtrack and the tastes of the individual listener.
# Troubleshooting

Incorrect operations are often mistaken for trouble and malfunctions. If you think that there is something wrong with this component, check the points below. Sometimes the trouble may lie in another component. Investigate the other components and electrical appliances being used. If the trouble cannot be rectified even after exercising the checks listed below, ask your nearest PIONEER authorized service center or your dealer to carry out repair work.

## Symptom | Cause | Remedy
---|---|---
**Power** | | |
The power does not turn on | The power plug is disconnected. | Connect the power plug to the wall outlet. |
| | The protection circuit may have been activated. | Disconnect the power plug from the outlet, and insert again. |
During loud playback the power suddenly switches off. | The protection circuit has been activated because the lowest actual impedance of the speakers (as opposed to the speakers’ rated impedance) is dangerously low. | Turn down the volume. |
| | When it’s convenient go to ACOUSTIC CAL EQ (see page 89) and lower the 63 Hz and 125 Hz equalizer levels using manual setting. | |
| | Turning DIGITAL SAFETY on may allow you to turn up the volume a little more. (From the Standby mode, and while holding down the MULTI JOG CONTROL SET UP button press the STANDBY/ON button. Each action switches SAFETY ON or OFF.) | |
The unit does not respond when the buttons are pressed. | Static electricity caused by dry air. | Switch the unit off, then on again. |
| | Disconnect the power plug from the outlet, and insert again. | |
During operation, the unit suddenly switches off. | The speaker wires are frayed or sticking out of the jack, and are touching the back of the receiver or another set of wires. | Reinsert the speaker wires, making sure there are no stray strands of wire and that they are inserted fully (see page 25). |
AMP ERR blinks in the display and the unit turns off. | The receiver probably has a serious problem. | Don't try to turn on the receiver. Call a Pioneer-accredited repair center to look at the problem. |
FAN STOP blinks in the display and the unit turns off. | Something is stuck in the fan and/or the fan is broken. | Remove the foreign object from the fan. If you can't do this and/or the fan is broken call a Pioneer-accredited repair center to look at the problem. |
OVERHEAT blinks in the display and no sound is output. | The receiver has gotten too hot. | Turn the receiver off and allow it to cool down with good ventilation. It is very likely that you have a heat dispersal and ventilation problem so please follow the instructions in “Installing the Receiver” on page 8 carefully. |
THDCT NG blinks in the display and the unit turns off. | The thermistor (temperature sensor) is broken. | Turn the receiver off, unplug from wall and call a Pioneer-accredited repair center to look at the problem. |

### Techno Tidbits and Problem-solving

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| **No sound output from the subwoofer.** | • The subwoofer setting is NO.  
• The subwoofer output setting is too low.  
• The bass peak level setting is too low.  
• There is very little low frequency information in your source.  
• The crossover frequency is set too low.  
• There is a problem with the subwoofer.  
• The subwoofer isn’t connected properly. | • Change the setting to YES or PLUS (see page 39).  
• Adjust the output setting to the level you want (see pages 41 and 87).  
• Adjust the bass peak level setting to the level you want (see page 94).  
• Change your subwoofer setting to one of the following (see page 39): Front: SMALL Subwoofer: YES  
Front: LARGE Subwoofer: PLUS  
• Raise the frequency level to match your speakers’ characteristics (see page 86).  
• Check the three following points:  
  • Check the power:  
  • Check the subwoofer volume control.  
  • Check the subwoofer hasn’t automatically switched to standby mode (check the subwoofer manual).  
• Check all connections (see page 25). |
| **No sound output from the surround back speakers.** | • The SB CH MODE is set to OFF.  
• The source is not a 6.1 channel playback source.  
• The surround back speakers aren’t connected properly.  
• The surround back channel is set to 1 speaker setting only, and the speaker is connected to the right channel output. | • Set the SB CH MODE to ON or AUTO (see page 54).  
• Set the SB CH MODE to ON or AUTO (see page 54) and choose one of the SURROUND listening modes (see pages 46 and 47).  
• Check all connections (see page 25).  
• Connect the speaker to the surround back left channel output (see page 25). |
| **No sound output from one (set of) speaker(s).** | • The speaker system setting is NO.  
• The speaker isn’t connected properly.  
• The source has no sound output for that channel.  
• The speaker output level is set too small. | • Change the speaker setting to YES (see page 39).  
• Check all connections (see page 25).  
• If you choose one of the SURROUND listening modes, a channel may be created for the speaker (see page 43).  
• Increase the speaker output level. |
| **Sound is produced from some components, but not from digital components.** | • SIGNAL SELECT is set incorrectly.  
• The digital inputs are assigned incorrectly, or not at all.  
• The digital components aren’t connected properly.  
• The player is not compatible with the source you’re using, or the player settings are incorrect.  
• The MULTI CH IN mode has been selected.  
• The digital output level has been turned down on a CD player or other component equipped with digital output level adjustment capability. | • Set SIGNAL SELECT to AUTO or according to the type of connections made (see page 44).  
• Set the digital input settings correctly (see pages 12, 23, and especially 81).  
• Check all connections.  
• Choose a compatible source, or check the player’s manual for the correct settings.  
• Choose one of the listening modes (see page 45). The MULTI CH IN switches off automatically.  
• Set the digital volume level of the player to full, or to the neutral position. |

<td>• Interference caused by other equipment (fluorescent lamp, motor, etc.).</td>
<td>• Turn off the equipment causing the noise or move it away from the receiver.</td>
</tr>
<tr>
<td></td>
<td>• Weak radio signals.</td>
<td>• Place the antenna farther away from the equipment causing the noise.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Connect an outdoor AM or FM antenna (see page 24).</td>
</tr>
<tr>
<td>Noise or hum can be heard even when there is no sound being input.</td>
<td>• There is electrical interference from another component or appliance.</td>
<td>• Check that personal computers or other digital components connected to the same power source are not causing interference.</td>
</tr>
<tr>
<td>When a search is performed by a DTS compatible CD player during playback, noise is output.</td>
<td>• The search function performed by the player interferes with the reading of digital information.</td>
<td>• This is not a malfunction, but be sure to turn the volume down to prevent the output of loud noise from your speakers.</td>
</tr>
<tr>
<td>When playing a DTS format LD there is noise audible on the soundtrack.</td>
<td>• The SIGNAL SELECT is on ANALOG.</td>
<td>• Set the SIGNAL SELECT to DIGITAL (see page 44).</td>
</tr>
<tr>
<td>Audio doesn’t record (in some cases, even if video does).</td>
<td>• You are trying to make an analog recording from a digital signal, or a digital recording of an analog source.</td>
<td>• You can only record analog to analog, or digital to digital. Make sure the playback and recording components are hooked up with the same kind of connections.</td>
</tr>
<tr>
<td></td>
<td>• The digital source is copy protected.</td>
<td>• You can’t record digital sources that have been copy protected.</td>
</tr>
<tr>
<td></td>
<td>• The jacks for recording have not been connected properly.</td>
<td>• Check connections (see pages 20 and 22).</td>
</tr>

<tbody>
<tr>
<td><strong>Video</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| No image is output when a function is selected. | • Improper connections.  
• The input source is not properly selected.  
• The video input selected on the TV monitor is incorrect.  
• The TV or monitor is hooked up with cord that is different than that used for the video player.  
• The component video setting is incorrect.  
• The MULTI-ROOM is off even though MULTI-ROOM monitor is connected. | • Make sure the component is connected correctly (see pages 16 and 17).  
• Press the correct function button.  
• Please read the TV monitor manual and change the settings accordingly.  
• Use the same cable to connect to your TV and all your video equipment (see pages 16 and 17).  
• Select the correct COMPONENT IN SELECT setting (see page 82).  
• Turn MULTI-ROOM on. |
| There is no image coming from the selected component video jacks. | • The type of cord connected to the TV doesn’t match your video input settings. | • Change the settings to match the cord connected (see page 16). |
| Can’t record video. | • The source is copy protected.  
• You are trying to record a source connected to the component video jacks.  
• The recorder’s video input is hooked up using a different type of cord to the source video output. | • You can’t record sources that have been copy protected.  
• Connect the component with S video or composite video cords (see pages 16 and 17).  
• Hook up the source and the recorder using the same type of video cord. (see page 17) |
| **Input/display** |                                           |                                                  |
| The display is dark. | • The display DIMMER button is pushed. | • Press DIMMER on the remote control repeatedly to return to the default setting (see page 56). |
| You can’t get DIGITAL to come up when using the SIGNAL SELECT button. | • Either the digital connections or the DIGITAL IN SELECT is incorrect.  
• MULTI CH IN mode is on. | • Make sure the digital connections (see pages 17 and 22) and the DIGITAL IN SELECT (see page 81) are done correctly.  
• Turn MULTI CH IN mode off (see page 53). |
| The digital format indicator doesn’t light up even when playing a non-PCM digital source. | • The player is paused or stopped.  
• There is a mistake in the player settings for audio output. | • Play the source.  
• Fix the audio settings (check the manual that came with your DVD player). |
| A compressed digital source is being played, but the digital format indicators don’t light up. | • Although it’s a non-PCM digital source there is a possibility the present track is not the proper format (5.1, 6.1, or 7.1 channel). | • There is no problem. The indicator won’t light when the track is not a compressed digital source. |
| During playback of a compressed digital source, the PRO LOGIC II or NEO:6 indicators show in the display. | • The digital signal is not being sent with the source.  
• The audio is in two channel format.  
• It has already been Dolby surround encoded. | • Choose DIGITAL or AUTO with the signal select button (see page 44).  
• This is not a malfunction. Check the manufacturer information for the source. |
| During playback of a Surround EX or DTS ES source on the AUTO setting, the EX and ES indicators won’t light. | • The source may be 6.1 playback compatible, but there is no signal from the source to indicate this. | • Switch the SB CH MODE to ON (see page 54). |
| During playback of a DVD audio source, the player shows a transfer rate of 96kHz, but the receiver does not. | • The multichannel connections are analog, so there is no digital transfer. | • This is not a malfunction. See the player’s manual for more details. |

Techno Tidbits and Problem-solving

Dear Customer:

Selecting fine audio equipment such as the unit you’ve just purchased is only the start of your musical enjoyment. Now it’s time to consider how you can maximize the fun and excitement your equipment offers. This manufacturer and the Electronic Industries Association’s Consumer Electronics Group want you to get the most out of your equipment by playing it at a safe level. One that lets the sound come through loud and clear without annoying blaring or distortion—and, most importantly, without affecting your sensitive hearing.

Sound can be deceiving. Over time your hearing “comfort level” adapts to higher volumes of sound. So what sounds “normal” can actually be loud and harmful to your hearing. Guard against this by setting your equipment at a safe level BEFORE your hearing adapts.

To establish a safe level:

• Start your volume control at a low setting.
• Slowly increase the sound until you can hear it comfortably and clearly, and without distortion.

Once you have established a comfortable sound level:

• Set the dial and leave it there.

Taking a minute to do this now will help to prevent hearing damage or loss in the future. After all, we want you listening for a lifetime.

We Want You Listening For A Lifetime

Used wisely, your new sound equipment will provide a lifetime of fun and enjoyment. Since hearing damage from loud noise is often undetectable until it is too late, this manufacturer and the Electronic Industries Association’s Consumer Electronics Group recommend you avoid prolonged exposure to excessive noise. This list of sound levels is included for your protection.

### Decibel Level

</thead>
<tbody>
<tr>
<td>30</td>
<td>Quiet library, soft whispers</td>
</tr>
<tr>
<td>40</td>
<td>Living room, refrigerator, bedroom away from traffic</td>
</tr>
<tr>
<td>50</td>
<td>Light traffic, normal conversation, quiet office</td>
</tr>
<tr>
<td>60</td>
<td>Air conditioner at 20 feet, sewing machine</td>
</tr>
<tr>
<td>70</td>
<td>Vacuum cleaner, hair dryer, noisy restaurant</td>
</tr>
<tr>
<td>80</td>
<td>Average city traffic, garbage disposals, alarm clock at two feet</td>
</tr>
</tbody>
</table>

THE FOLLOWING NOISES CAN BE DANGEROUS UNDER CONSTANT EXPOSURE

- 90 Subway, motorcycle, truck traffic, lawn mower
- 100 Garbage truck, chain saw, pneumatic drill
- 120 Rock band concert in front of speakers, thunderclap
- 140 Gunshot blast, jet plane
- 180 Rocket launching pad

Information courtesy of the Deafness Research Foundation.

Maintenance of External Surfaces

- Use a polishing cloth or dry cloth to wipe off dust and dirt.
- When the surfaces are dirty, wipe with a soft cloth dipped in some neutral cleanser diluted five or six times with water, and wrung out well, and then wipe again with a dry cloth. Do not use furniture wax or cleaners.
- Never use thinners, benzine, insecticide sprays or other chemicals on or near this unit, since these will corrode the surfaces.
Specifications

**Amplifier Section**
Continuous average power output of 100 watts* per channel, min., at 8 ohms, from 20 Hz to 20,000 Hz with no more than 0.09% ** total harmonic distortion (front).

Continuous Power Output:
- Front: 100 W + 100 W (20 Hz – 20 kHz, 0.09%, 8 Ω)
- Center: 100 W (20 Hz – 20 kHz, 0.09%, 8 Ω)
- Surround: 100 W + 100 W (20 Hz – 20 kHz, 0.09%, 8 Ω)
- Surround Back: 100 W + 100 W (20 Hz – 20 kHz, 0.09%, 8 Ω)

**Audio Section**
Input (Sensitivity/Impedance)
- LINE: 335 mV/47 kΩ

Frequency Response
- LINE: 5 Hz to 100,000 Hz +3 dB
- Tone Control:
  - BASS: ± 6 dB (100 Hz)
  - TREBLE: ± 6 dB (10 kHz)
  - LOUDNESS: +4/-2 dB (100Hz/10 kHz)
- Signal-to-Noise Ratio (IHF, short circuited, A network): 101 dB
- Signal-to-Noise Ratio (EIA, at 1 W (1 kHz)):
  - LINE: 83 dB
* Measured pursuant to the Federal Trade Commission’s Trade Regulation rule on Power Output Claims for Amplifiers.
** Measured by Audio Spectrum Analyzer.

**Video Section (S jack)**
Input (Sensitivity/Impedance): 1 Vp-p/75 Ω
Output (Level/Impedance): 1 Vp-p/75 Ω
Frequency Response: 5 Hz to 10 MHz +3 dB
Signal-to-Noise Ratio: 65 dB

**Component Video Section**
Input (Sensitivity): 1 Vp-p/75 Ω
Output (Level/Impedance): 1 Vp-p/75 Ω
Frequency Response: 5 Hz to 40 MHz +3 dB
Signal-to-Noise Ratio: 65 dB

**Video Section (Composite)**
Input (Sensitivity/Impedance)
- LINE: 1 Vp-p/75 Ω
Output (Level/Impedance)
- LINE: 1 Vp-p/75 Ω
Frequency Response
- LINE: 5 Hz to 10 MHz +3 dB
Signal-to-Noise Ratio

**FM Tuner Section**
Frequency Range: 87.5 MHz to 108 MHz
Usable Sensitivity: Mono: 13.2 dB, IHF (1.3 µV/75Ω)
50 dB Quieting Sensitivity: Mono: 20.2 dB, Stereo: 38.6 dB
Signal-to-Noise Ratio: Mono: 73 dB (at 85 dBf)
Stereo: 38.6 dBf
Distortion: Stereo: 0.5 % (1 kHz)
Alternate Channel Selectivity: 60 dB (400 kHz)
Stereo Separation: 40 dB (1 kHz)
Frequency Response: 30 Hz to 15 kHz (±1 dB)
Antenna Input: 75 Ω unbalanced

**AM Tuner Section**
Frequency Range: 530 kHz to 1,700 kHz
Sensitivity (IHF, Loop antenna): 350 µV/m
Selectivity: 25 dB
Signal-to-Noise Ratio: 50 dB
Antenna: Loop antenna

**Miscellaneous**
Power Requirements: AC 120 V, 60 Hz
Power Consumption: 600 W
Power Consumption in Standby mode: 0.8 W
AC Outlet SWITCHED: 100 W (0.8 A) MAX
Dimensions: 420 (W) × 188 (H) × 464 (D) mm
Weight (without package): 17.4 kg (38.6 lbs)

**Furnished Parts**
- Battery: “AA” IEC LR6: 2 pieces
- AM loop Antenna: 1 piece
- FM wire Antenna: 1 piece
- AC outlet: 1 piece
- Dimensions: 16-9/16 (W) × 7-7/16 (H) × 18-5/16 (D) in.

**NOTE:** Specifications and the design are subject to possible modifications without notice, due to improvements.
Should this product require service in the U.S.A. and you wish to locate the nearest Pioneer Authorized Independent Service Company, or if you wish to purchase replacement parts, operating instructions, service manuals, or accessories, please call the number shown below.

800-421-1404

Please do not ship your product to Pioneer without first calling the Customer Support Division at the above listed number for assistance.

Pioneer Electronics (USA) Inc.
Customer Support Division
P.O. BOX 1760, Long Beach,
CA 90801-1760, U.S.A.

For warranty information please see the Limited Warranty sheet included with your product.

Should this product require service in Canada, please contact a Pioneer Canadian Authorized Dealer to locate the nearest Pioneer Authorized Service Company in Canada. Alternatively, please contact the Customer Satisfaction Department at the following address:

Pioneer Electronics of Canada, Inc.
Customer Satisfaction Department
300 Allstate Parkway, Markham, Ontario L3R OP2
(905) 479-4411
