- Remote control — when recording, this unit is an analog device, digital degradation is likely to occur when digital-to-analog conversion is in progress. 80 GB drives and drives have Regional Code classifications that determine whether a unit can only play back and/or record on recording media that matches its regional code. Discs and players must have matching region codes in order to be played. This DVD player is classed as Region 1. A DualDisc, on the other hand, contains both a DVD content section and a recordable audio side. The DVD side of a DualDisc plays in this product. DVD-RW/R/RW discs and players must have matching region codes in order to be played. This DVD player is classed as Region 1. A DualDisc, on the other hand, contains both a DVD content section and a recordable audio side. The DVD side of a DualDisc plays in this product.
- ISO 9660 Level 1 or 2 compliant • CD physical format: Mode 1, Mode 2 XA Form 1.
- MP3 file name requires MP3 or mp3 as an extension • Chinese characters cannot be displayed, although files featuring them can be played back • 299 tracks/folders can be played per disc • Can play up to 999 folders in a single disc, but playing them may be time-consuming • Can play only on drives that have been installed on this unit in the recording conditions, such as the age and condition of the media.
- 170 Hours recording time in HDD and 10 hours recording time available only in lowest quality mode (SEP mode).
- Write speed may vary depending on media speed as well as the age and condition of the media.
- Unfinalized disc playback: CD-Audio only.
