## PRV-LX1 – Media Compatibility

---

### OVERVIEW:

Many media manufacturers offer a variety of DVD disc formats and speeds. Usually, the more expensive media has met a higher Quality Control Standard. The DVD-R/RW drives in the PRV-LX1 write at a maximum speed of 4X on DVD-R media and 2X on DVD-RW media when copying from the Hard Disk Drive or copying from disc to disc. Real time recording is always done at 1X record speed. However, PRV-LX1 can record data to media specified at greater than 4X writing speed.

This document provides a summary of the media that has been evaluated with the PRV-LX1. Media trials suggest that the recorder can write at speeds of up to 4X on select 8X and 16X DVD-R media. However, this document does not guarantee quality, media compatibility, or writing speeds rated on the media. Writing speed is dependent upon factors such as recording length, video quality (bit rate), complexity of source material, etc.

### TECHNICAL DETAILS:

Pioneer has tested the following 8X and 16X DVD-R media and found their recording performance to be consistent and reliable when used with the Pioneer industrial PRV-LX1 DVD Recorder.

- ◆ Maxell 8X Industrial Grade (Scratch Resistant)
- ◆ Memorex 16X
- ◆ Memorex 8X
- ◆ Sony 8X
- ◆ TDK 16X
- ◆ TDK 8X
- ◆ Verbatim 16X

The above list represents media tested by Pioneer and is not comprehensive. Media from other manufacturers can also be used with the PRV-LX1. However, it has been reported to Pioneer that writing to other media brands may slow writing speed or result in disc-read issues after the disc is finalized. Please test media brands and speeds with your PRV-LX1 before erasing material from the original source.

### ADDITIONAL INFORMATION:

Additional PRV-LX1 information is available under the *Business Products Support* area of the Pioneer website: [http://www.pioneerelectronics.com/pna/links/list/0,,2076\\_4247,00.html](http://www.pioneerelectronics.com/pna/links/list/0,,2076_4247,00.html).
